

CSE/STAT 416

Course Wrap Up & Guest Lectures

Amal Nanavati
Paul G. Allen School of Computer Science & Engineering
University of Washington
August 15, 2022

Adapted from Hunter Schafer's slides

Upcoming Deadlines

TOMORROW Tues 8/16 11:59PM: HW7 due

- **NO LATE DAYS!!!**

Wed 8/17 9AM: Final Exam released

Thurs 8/18 11:59PM: Final Exam due

- **NO EXTENSIONS!!!**

Fri 8/19 11:59PM: Guest lecture extra credit

- Worth 1 Conceptual Homework (3.57% of your grade)
- Submit on Gradescope.

No course work will be accepted after Fri Aug 19 11:59PM

- e.g., late checkpoints

Final Exam Logistics

Released Wed 8/17 **9AM**, Due Thurs 8/18 **11:59PM**

On Gradescope, completed **individually**

Expected Length: **2 hours** (with time pressure)

- You can take it for any subset of the 38 hours 59 mins it is released, including in multiple sittings.

Allowable Resources:

- Your Learning Reflections
- Lecture Slides & Personal Notes
- Checkpoints
- HW Assignments

Disallowed Resources:

- Google / the Internet
- Your peers

Getting Help:

- Office hours are canceled Wed-Fri!
- We will only respond to EdSTEM questions on logistics and clarifications
- All EdSTEM responses will be public.

Final Exam Format

11 questions, each with several subquestions

~45 subquestions total

- ~ 1/3 Free Response
- ~ 1/3 Numeric Calculations
- ~ 1/3 Multiple Choice Questions
- (One question asks you to upload a file, other questions give you the option to upload a file showing your work)

All Conceptual

- Think of it like a cumulative conceptual assignment

15% of your course grade

BE SURE TO SAVE YOUR ANSWERS FREQUENTLY!

Tips on Taking the Final Exam

Take-home exams are like a gas; they expand to fill all the time you give it!

- You can overthink every question, you can cross-reference course material for every question. This is not something you'd do for an in-class exam.

To avoid this exam from taking up all your time:

- Set a maximum amount of time you'll spend on the final. (e.g., 3 hours? 4 hours? Your choice.)
- First pass:
 - Set a timer for 2 hours
 - Take it under time pressure. Submit your best answer given the time constraints.
 - Note down which questions you're less sure about.
- Remaining pass(es):
 - Revisit the questions you were unsure about, try them with more time.
- Submit and stop thinking about the exam when the max time has elapsed! At some point, spending more time won't help.

Think 

5 mins

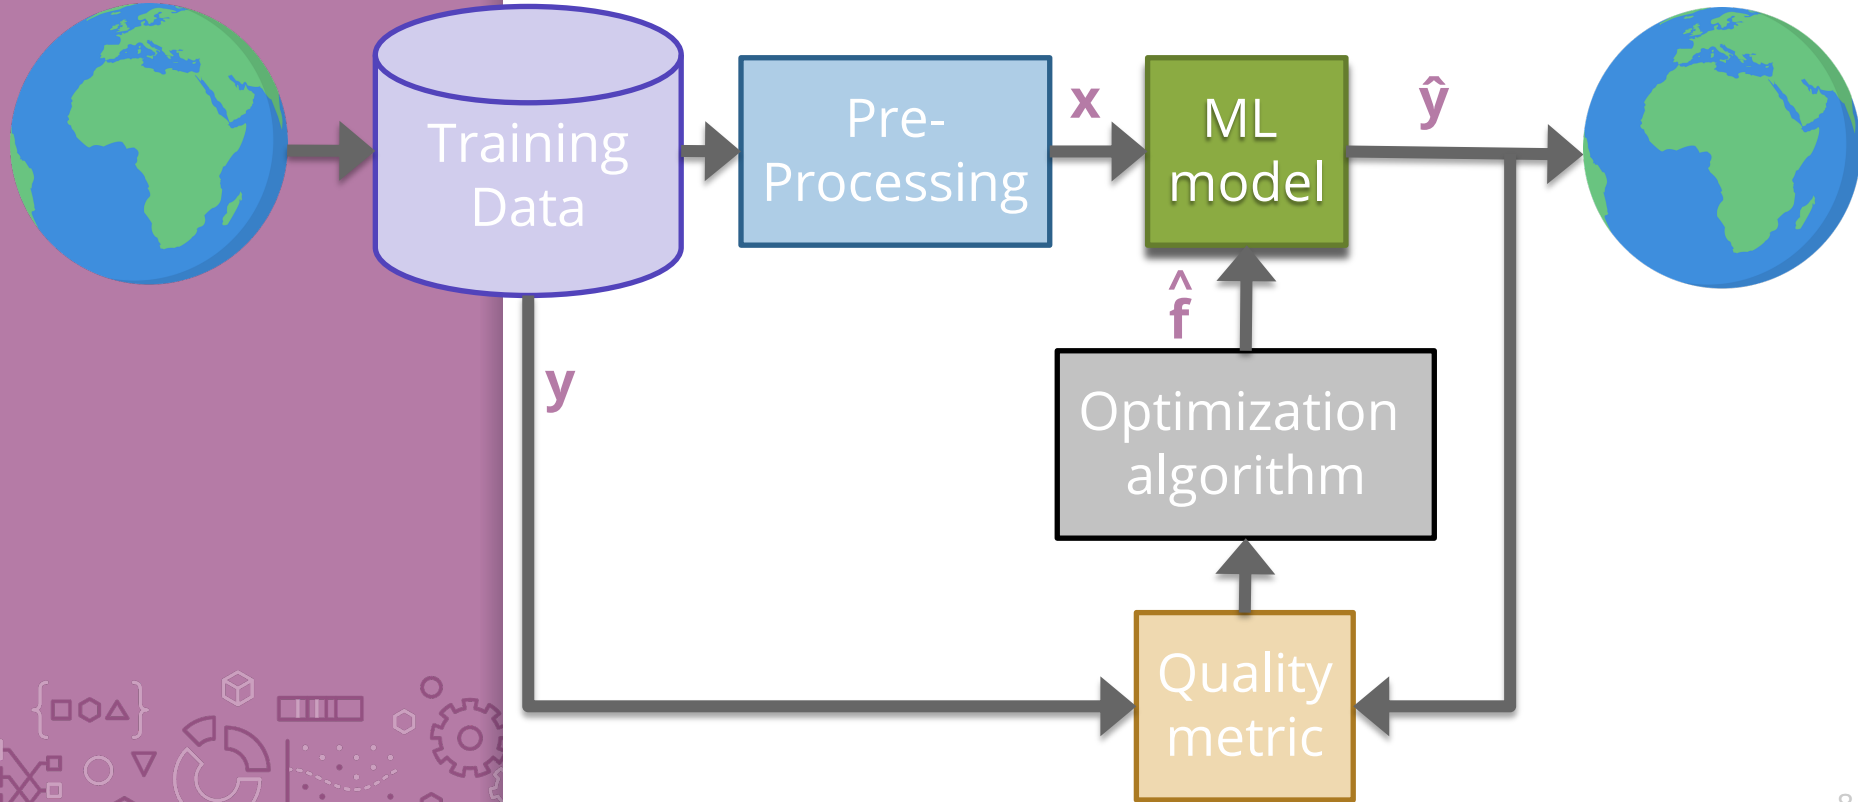

There is extra credit available on the final if you complete the course evals.

Take 5 minutes right now to complete course and section evals:

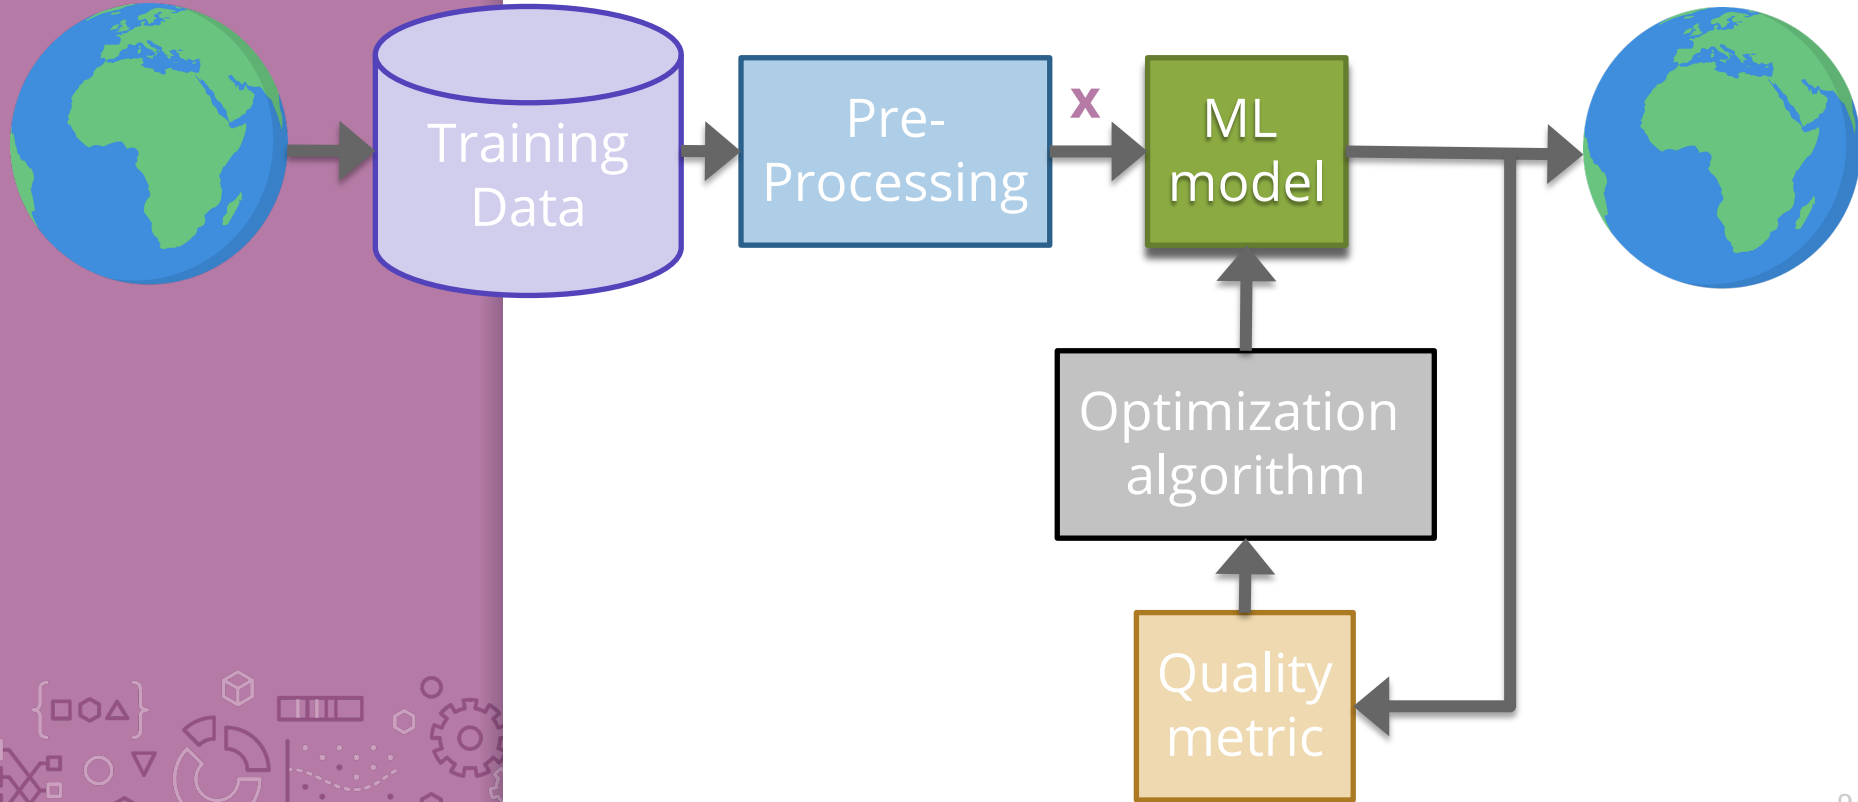

- **Course:** <https://uw.iasystem.org/survey/261325>
- **Section AA/BA (Wuwei):** <https://uw.iasystem.org/survey/261326>
- **Section AB/BB (Karman):** <https://uw.iasystem.org/survey/261327>
- **Section AC/BC (Max):** <https://uw.iasystem.org/survey/261189>

Course Recap

ML Pipeline (Supervised)

ML Pipeline (Unsupervised)

Poll Everywhere

Group 

5 mins

Let's use the ML Pipeline to classify the concepts we've learnt in the course so far!

For each component of the ML Pipeline below, contribute to the PollEv word cloud regarding what concepts fit into that component! (1 min each)

- Pre-Processing
- ML Models
- Quality Metrics
- Optimization Algorithms
- Concepts that don't fit neatly into one category of the pipeline

pollev.com/cs416

One Slide

Regression
Overfitting
Bias-Variance tradeoff
Training, test, and validation error
Cross validation
Ridge, LASSO
Standardization
Gradient Descent
Classification
Text Encodings (BoW, TF-IDF)
Logistic Regression
Social Bias & Fairness in ML
k-NN Classification
Decision Trees
Random Forests
AdaBoost
Precision and Recall
Handling Missing Data

Neural Networks
Convolutional Neural Networks
Transfer Learning for deep neural networks
Unsupervised v. supervised learning
k-means clustering
Hierarchical clustering
Dimensionality reduction, PCA
Recommender systems
Matrix factorization
Coordinate descent

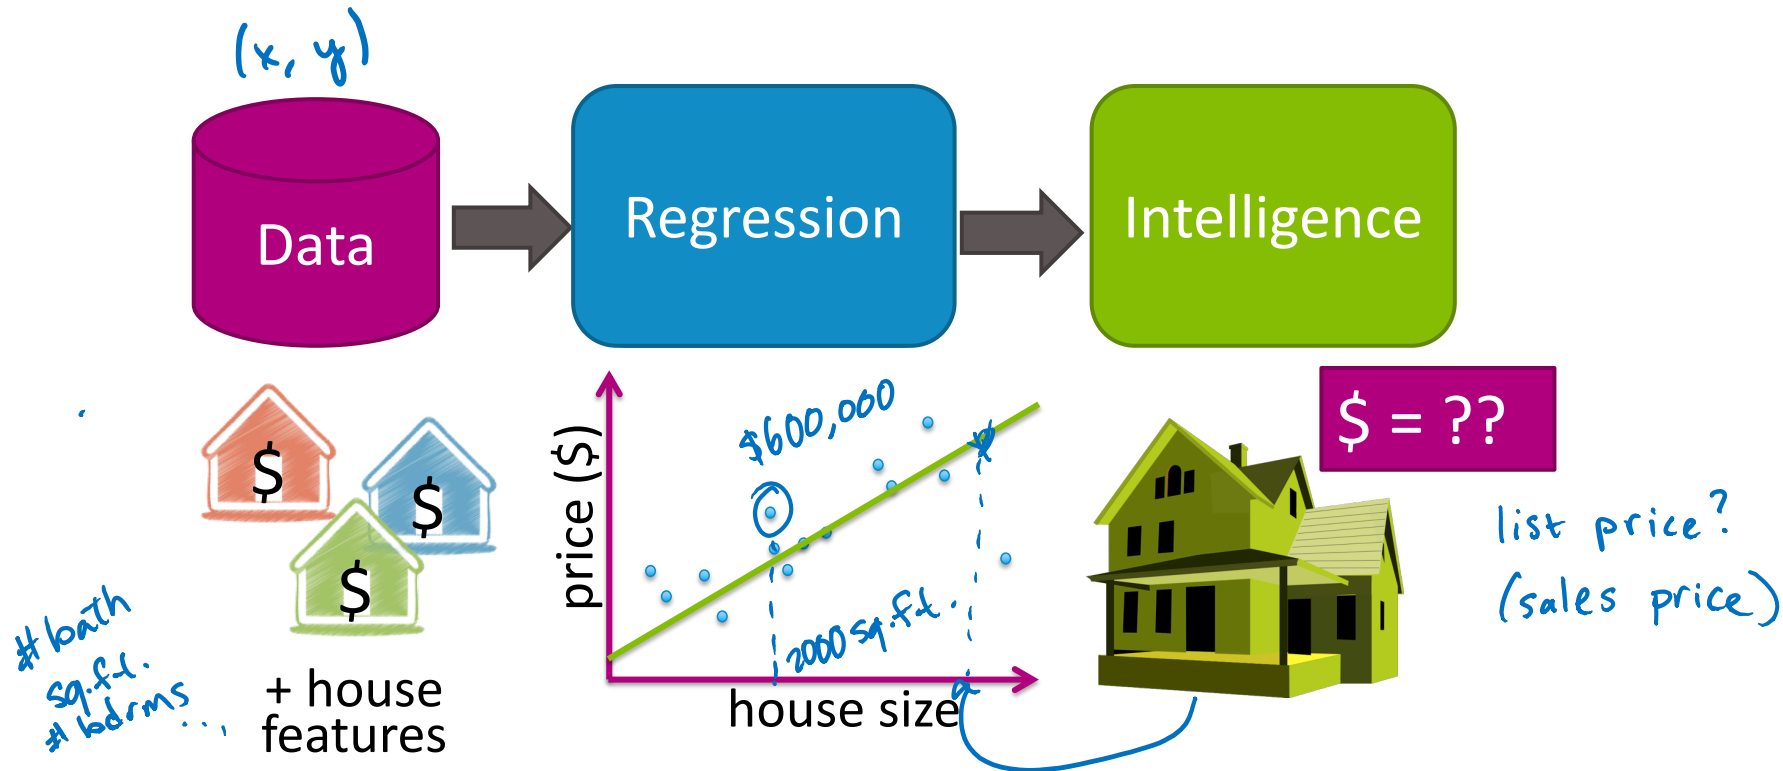

Case Study 1:

Predicting house prices

$$\text{Model: } y_i = f(x_i) + \epsilon_i$$

$$\text{Predictor: } \hat{y}_i = \hat{f}(x_i)$$

Regression

Ridge: $\arg \min_w L(w) + \lambda ||w||_2^2$

Case study: Predicting house prices

Models

- Linear regression
- Regularization: Ridge (L2), Lasso (L1)

Algorithms

- Gradient descent

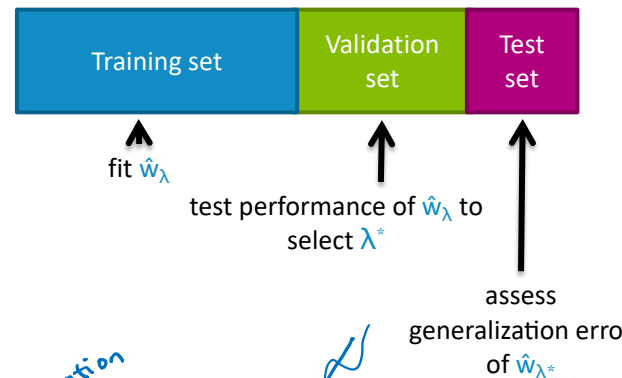

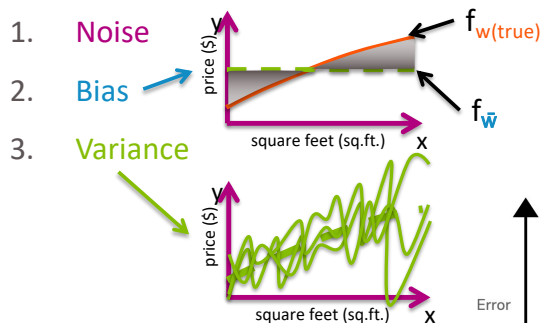

Regression

Case study: Predicting house prices

Concepts

- Loss functions, bias-variance tradeoff, cross-validation, sparsity, overfitting, model selection

Case Study 2:

Sentiment analysis

Sushi was awesome,
the food was awesome,
but the service was awful.

All reviews:

stars / +/-
text

7/21/2015
This is probably my favorite place to eat Japanese in Seattle. My boyfriend and I ordered nigiri of scallop, Japanese snapper (seasonal), and the agedashi tofu and 2 special rolls. I would skip the special rolls, because the nigiri and sashimi cuts is where this place excels. The tofu, as recommended by other Yelpers was amazing. It's more chewy and the sauce/gray is the perfect amount of flavor for the delicate tofu.

6/11/2015
Dining here at the sushi bar made me feel like sitting front row to an amazing performance. We didn't have resos, banged down to the ID after work, got here breathlessly at 5:10pm, and got the last two seats in the place.

6/9/2015
I came here having high expectations due to the reviews of this place, but I was bit disappointed. The restaurant is small so do make reservations when you come here. Dishes cost from \$4-25 each and dishes are small.

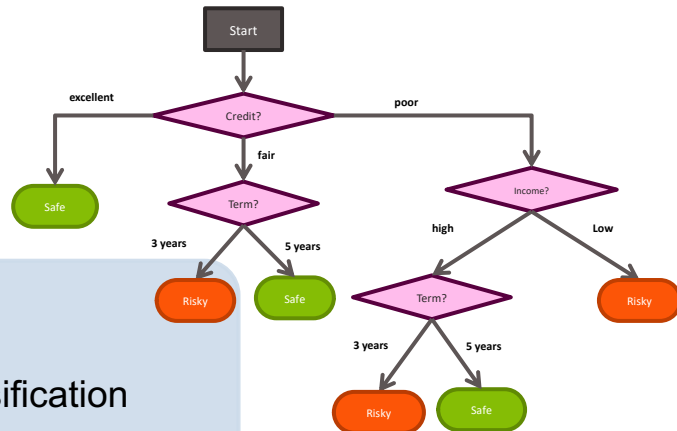

Classification

Case study: Analyzing sentiment

Models

- Linear classifiers (logistic regression)
- Multiclass classifiers
- Decision trees, k-nearest neighbors classification
- Boosted decision trees and random forests

Algorithms

- Boosting
- Learning from weighted data

$$\text{sign} \left(\begin{bmatrix} .42 \\ .65 \\ .92 \end{bmatrix} \right) = \begin{bmatrix} .42 \\ .65 \\ .92 \end{bmatrix}$$

Concepts

- Decision boundaries, maximum likelihood estimation, ensemble methods, random forests
- Precision and recall

Case Study 3:

Image classification

Deep Learning

Case study: Image classification

Models

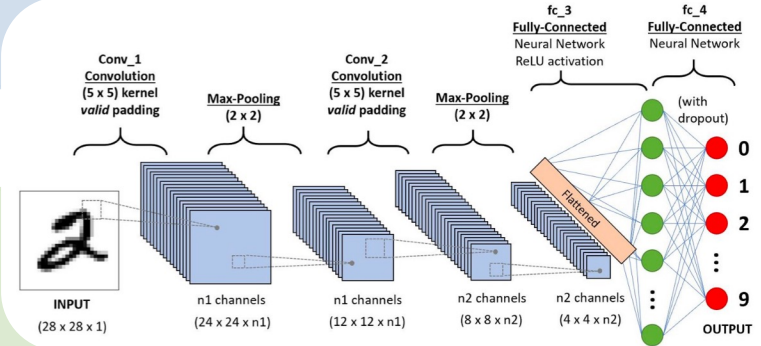

- Perceptron
- General neural network
- Convolutional neural network

Algorithms

- Convolutions
- Backpropagation (high level only)

Concepts

- Activation functions, hidden layers, architecture choices

Case Study 4:

Document Clustering & Analysis

Clustering & Retrieval

Case study: Finding documents

Models

- Clustering
- Mixture Models
- Hierarchical Clustering

Algorithms

- k-means / k-means++
- Agglomerative & Divisive Clustering
- Principal Component Analysis

Concepts

- Unsupervised Learning
- Clustering
- Dimensionality Reduction

Principal components:

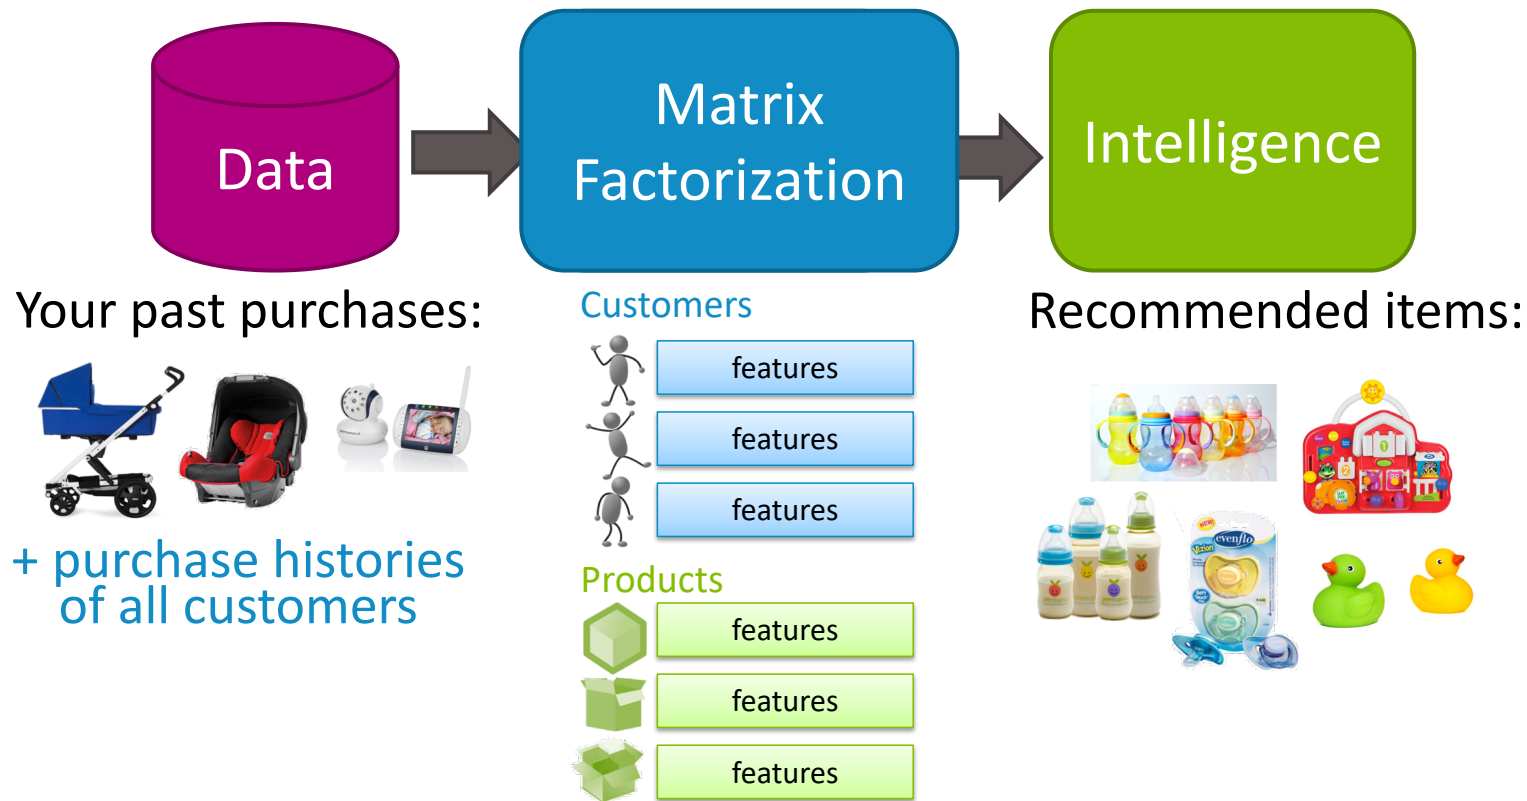

Reconstructing:

Case Study 5:

Product recommendation

Recommender Systems & Matrix Factorization

Case study: Recommending Products

Models

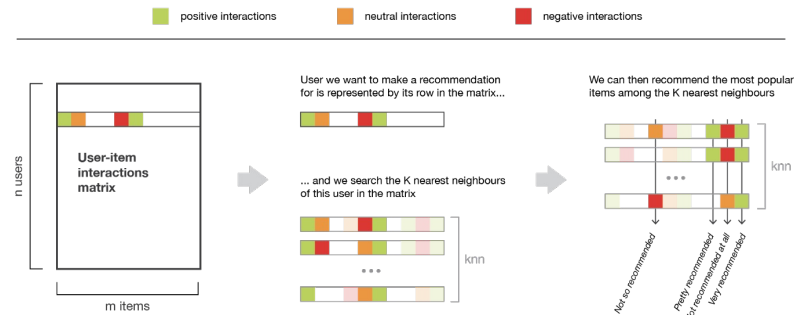

- Collaborative filtering
- Matrix factorization

Algorithms

- Coordinate descent

Concepts

- Matrix completion, cold-start problem, co-occurrence matrix, Jaccard Similarity

Rating =

$$\approx \begin{matrix} \boxed{L} & \boxed{R'} \end{matrix}$$

Parameters of model

	Sunglasses	Baby Bottle	...	Diapers	Swim Trunks	Baby Formula
Sunglasses	1.00	0.03	...	0.02	0.23	0.04
Baby Bottle	0.03	1.00	...	0.09	0.04	0.12
...
Diapers	0.02	0.09	...	1.00	0.04	0.08
Swim Trunks	0.23	0.04	...	0.04	1.00	0.03
Baby Formula	0.04	0.12	...	0.08	0.03	1.00

Bias & Fairness in ML

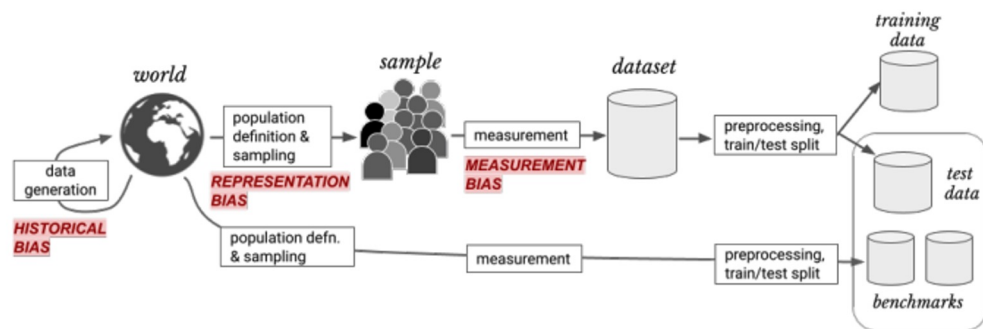

Fairness Metrics:

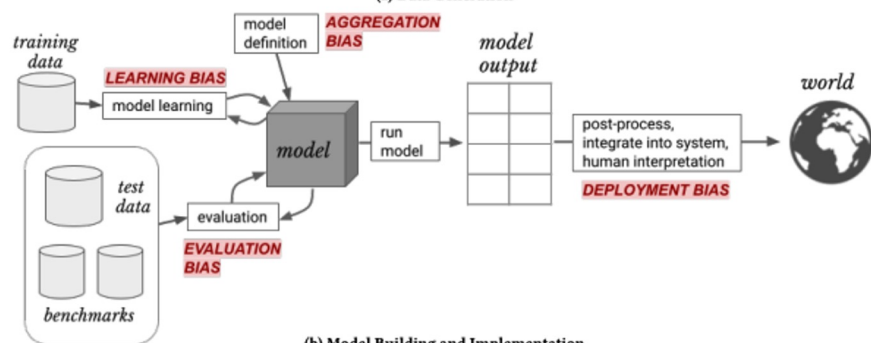

- Fairness through Unawareness
- Statistical Parity
- Equal Opportunity

(Some) Potential Solutions:

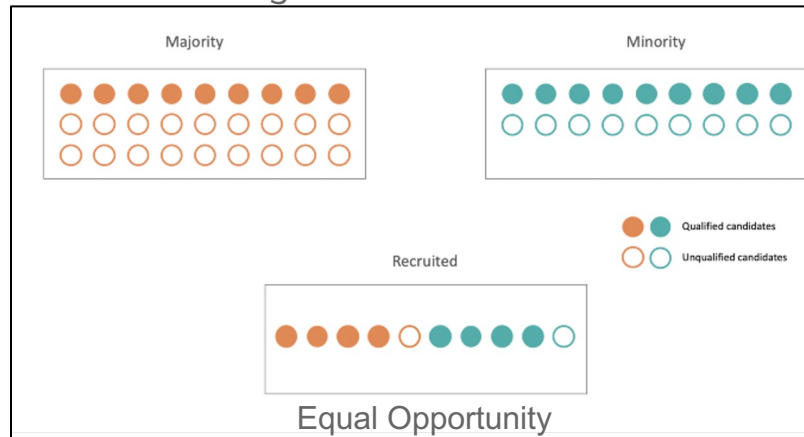

- Not developing the tech
- Education 😊
- More inclusive datasets
- Incorporating Fairness Metrics into the Algorithm
- Regulation

(a) Data Generation

(b) Model Building and Implementation

Future Directions

Data Science courses offered at UW: <https://escience.washington.edu/data-science-courses-at-the-university-of-washington/>

A few directions of ML research that I'm excited by:

- FACCT (ACM Conference on Fairness, Accountability, and Transparency)

- Interpretability (how can we understand what deep networks are doing?)

- Interactive Learning, Online Learning

- Reinforcement Learning, Robot Learning

- Green AI, making learning more efficient

- ML for Healthcare, Computational Biology

- ML Education, training a generation of data scientists that are fluent in ethical & social considerations

Big Picture

Improving the performance at some task through experience!

Before you start any learning task, remember fundamental questions that will impact how you go about solving it

What is the learning problem?

From what experience?

What model?

What loss function are you optimizing?

With what optimization algorithm?

Are there any guarantees?

How will you evaluate the model?

Who will it impact and how?

Congrats on finishing CSE/STAT 416!
Thanks for the hard work!

Brain Break
