## CSE 417: Algorithms and Computational Complexity

## 6: Dynamic Programming, III Longest Increasing Subseq.

Winter 2005
W. L. Ruzzo

## Longest Increasing Run

- Given a sequence of integers $\mathrm{S}_{1}, \ldots, \mathrm{~S}_{\mathrm{n}}$ find a subsequence $\mathrm{s}_{\mathrm{i}}<\mathrm{S}_{\mathrm{i}+1}<\ldots<\mathrm{S}_{\mathrm{i}+\mathrm{k}}$ so that $\mathrm{k}>0$ is as large as possible.
- e.g. Given $9,5,2,5,8,7,3,1,6,9$ as input,
- possible increasing subsequence is 1,6
- better is $2,5,8$ or $1,6,9$ (either or which would be a correct output to our problem)

Three Steps to
Dynamic Programming

- Formulate the answer as a recurrence relation or recursive algorithm
- Show that number of different parameters in the recursive algorithm is "small" (e.g. bounded by a low-degree polynomial)
- Specify an order of evaluation for the recurrence so that already have the partial results ready when you need them.

## Longest Increasing Subsequence

- Given a sequence of integers $\mathrm{S}_{1}, \ldots, \mathrm{~S}_{\mathrm{n}}$ find a subsequence $\mathrm{s}_{\mathrm{i}_{1}}<\mathrm{s}_{\mathrm{i}_{2}}<\ldots<\mathrm{s}_{\mathrm{i}_{\mathrm{k}}}$ with $\mathrm{i}_{1_{1}}<\ldots<\mathrm{i}_{\mathrm{k}}$ so that $k$ is as large as possible.
- e.g. Given $9,5,2,5,8,7,3,1,6,9$ as input,
- possible increasing subsequence is $2,5,7$
- better is $2,5,6,9$ or $2,5,8,9$ (either or which would be a correct output to our problem; and there are others)

## Find recursive algorithm

- Solve sub-problem on $\mathrm{s}_{1}, \ldots, \mathrm{~s}_{\mathrm{n}-1}$ and then try to extend using $\mathrm{s}_{\mathrm{n}}$
- Two cases
- $S_{n}$ is not used
- answer is the same answer as on $\mathrm{s}_{1}, \ldots, \mathrm{~s}_{\mathrm{n}-1}$
$-\mathrm{S}_{\mathrm{n}}$ is used
- answer is $\mathrm{s}_{\mathrm{n}}$ preceded by the longest increasing subsequence in $\mathrm{s}_{1}, \ldots, \mathrm{~s}_{\mathrm{n}-1}$ that ends in a number smaller than $\mathrm{s}_{\mathrm{n}}$

## Recurrence

- Let $L[i]=$ length of longest increasing subsequence in $\mathrm{s}_{1}, \ldots, \mathrm{~s}_{\mathrm{n}}$ that ends in $\mathrm{s}_{\mathrm{i}}$.
- $L[j]=1+\max \left\{L[i]: i<j\right.$ and $\left.s_{i}<s_{j}\right\}$ (where max of an empty set is 0 )
- Length of longest increasing subsequence:
$-\max \{L[i]: 1 \leq i \leq n\}$

## Refined recursive idea

 (stronger notion of subproblem)- Suppose that we knew for each $i<n$ the longest increasing subsequence in $\mathrm{s}_{1}, \ldots, \mathrm{~s}_{\mathrm{n}-1}$ ending in $\mathrm{s}_{\mathrm{i}}$
$-i=n-1$ is just the $n-1$ size sub-problem we tried before.
- Now to compute value for $\mathrm{i}=\mathrm{n}$ find
$-s_{n}$ preceded by the maximum over all $i<n$ such that $s_{i}<s_{n}$ of the longest increasing subsequence ending in $\mathrm{s}_{\mathrm{i}}$
- First find the best length rather than trying to actually compute the sequence itself.

## Computing the actual sequence

- For each j, we computed
$L[j]=1+\max \left\{L[i]: i<j\right.$ and $\left.s_{i}<s_{j}\right\}$
(where max of an empty set is 0 )
- Also maintain $P[j]$ the value of the $i$ that achieved that max
- this will be the index of the predecessor of $s_{j}$ in a longest increasing subsequence that ends in $\mathrm{s}_{\mathrm{j}}$
- by following the P[j] values we can reconstruct the whole sequence in linear time.

## Longest Increasing

Subsequence Algorithm

- for $j=1$ to n do

L[j] $<1$
$P[j] \leftarrow 0$
for $\mathrm{i}=1$ to $\mathrm{j}-1$ do
if $\left(\mathrm{s}_{\mathrm{i}}<\mathrm{s}_{\mathrm{i}} \& L[\mathrm{i}]+1>\mathrm{L}[\mathrm{j}]\right)$ then
P[j] $\leftarrow i$
$L[j] \leftarrow L[i]+1$

## endfor

 endfor- Now find $\mathbf{j}$ such that L[j] is largest and walk backwards through $\mathrm{P}[\mathrm{j}]$ pointers to find the sequence

## Example

| i | 1 | 2 | 3 | 4 | 5 | 6 | 7 | 8 | 9 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| $\mathrm{S}_{\mathrm{i}}$ | 90 | 50 | 20 | 80 | 70 | 30 | 10 | 60 | 40 |
| $\mathrm{I}_{\mathrm{i}}$ |  |  |  |  |  |  |  |  |  |
| $\mathrm{p}_{\mathrm{i}}$ |  |  |  |  |  |  |  |  |  |
