# CSE 417 <br> Algorithms and Complexity 

Lecture 24
Network Flow, Part 1

## Announcements

- Homework 8 available
- Due Friday, Dec 4 (accepted until Dec 6)
- Three DP Problems, three netflow problems
- Happy Thanksgiving!

## Network Flow

## Outline

- Network flow definitions
- Flow examples
- Augmenting Paths
- Residual Graph
- Ford Fulkerson Algorithm
- Cuts
- Maxflow-MinCut Theorem

## Network Flow Definitions

- Capacity
- Source, Sink
- Capacity Condition
- Conservation Condition
- Value of a flow

## Flow Example

## Network Flow Definitions

- Flowgraph: Directed graph with distinguished vertices s (source) and t (sink)
- Capacities on the edges, $c(e)>=0$
- Problem, assign flows $f(e)$ to the edges such that:
$-0<=\mathrm{f}(\mathrm{e})<=\mathrm{C}(\mathrm{e})$
- Flow is conserved at vertices other than s and t
- Flow conservation: flow going into a vertex equals the flow going out
- The flow leaving the source is a large as possible

## Flow Example

## Find a maximum flow

## Flow Example

## Residual Graph

- Flow graph showing the remaining capacity
- Flow graph G, Residual Graph $G_{R}$
- $G$ : edge e from $u$ to $v$ with capacity $c$ and flow $f$
$-G_{R}$ : edge e' from $u$ to $v$ with capacity $c-f$
$-G_{R}$ : edge e" from $v$ to $u$ with capacity $f$

## Flow assignment and the residual graph

## Augmenting Path Algorithm

- Augmenting path
- Vertices $\mathrm{V}_{1}, \mathrm{~V}_{2}, \ldots, \mathrm{~V}_{\mathrm{k}}$
- $\mathrm{v}_{1}=\mathrm{s}, \mathrm{v}_{\mathrm{k}}=\mathrm{t}$
- Possible to add $b$ units of flow between $v_{j}$ and $v_{j+1}$ for $\mathrm{j}=1 \ldots \mathrm{k}$-1

## Build the residual graph

Residual graph:

## Find two augmenting paths

## Augmenting Path Lemma

- Let $P=v_{1}, v_{2}, \ldots, v_{k}$ be a path from $s$ to $t$ with minimum capacity $b$ in the residual graph.
- b units of flow can be added along the path $P$ in the flow graph.

## Proof

- Add $b$ units of flow along the path $P$
- What do we need to verify to show we have a valid flow after we do this?

## Ford-Fulkerson Algorithm (1956)

while not done
Construct residual graph $G_{R}$
Find an s-t path $P$ in $G_{R}$ with capacity $b>0$
Add $b$ units along in $G$

If the sum of the capacities of edges leaving $S$ is at most $C$, then the algorithm takes at most C iterations
