Lemmas

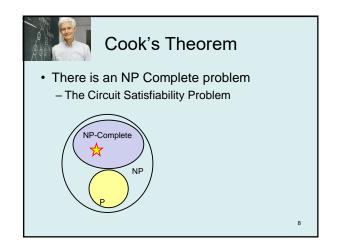

- If $X \leq_P Y$ and $Y \leq_P Z$ then $X \leq_P Z$
- Suppose X <_P Y. If Y can be solved in polynomial time, then X can be solved in polynomial time.
- Suppose X <_P Y. If X cannot be solved in polynomial time, then Y cannot be solved in polynomial time.

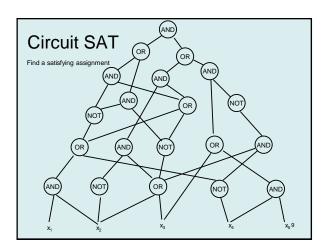

6

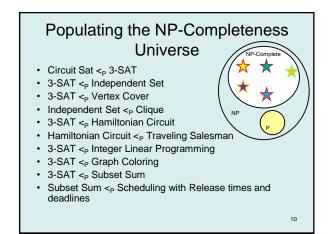

NP-Completeness

- A problem X is NP-complete if
 - -X is in NP
 - For every Y in NP, $Y <_P X$
- X is a "hardest" problem in NP

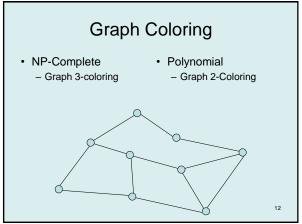

If X is NP-Complete, Z is in NP and $X <_P Z$ then Z is NP-Complete

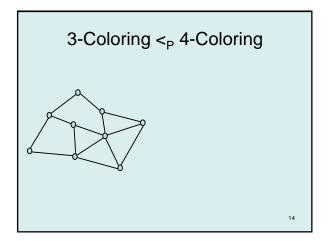

NP Completeness Proofs If X is NP-Complete, Z is in NP and X Pick a known NP-Complete problem and develop a reduction Two common types of reductions Modification based (generally easy) Gadget based from SAT (generally not easy) Make sure you have the direction of the reduction correct Known NPC problem

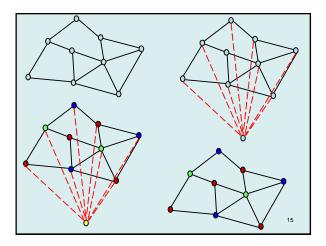

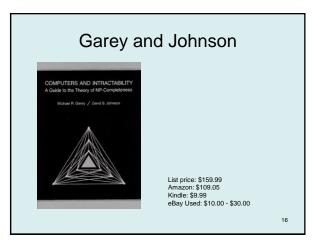

Graph 4-Coloring

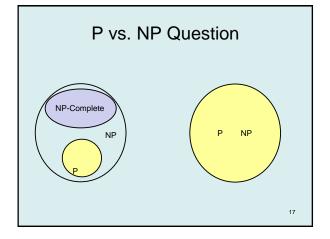

- Given a graph G, can G be colored with 4 colors?
- Prove 4-Coloring is NP Complete
- Proof: 3-Coloring <_P 4-Coloring
- Show that you can 3-Color a graph if you have an algorithm to 4-Color a graph

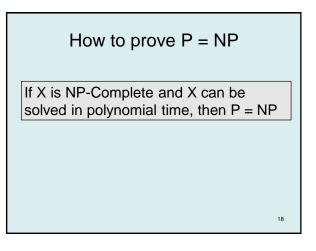

13

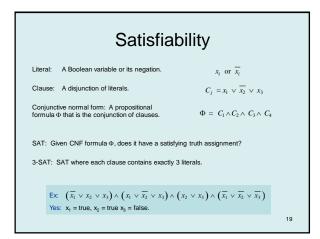

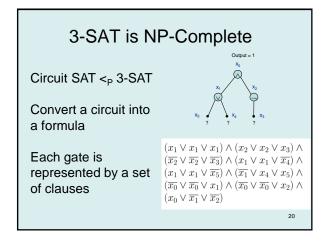

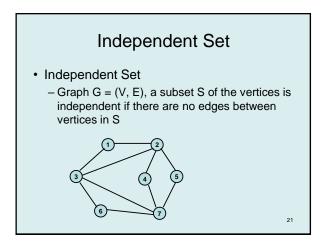

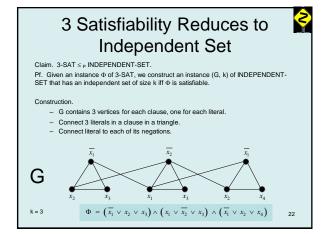

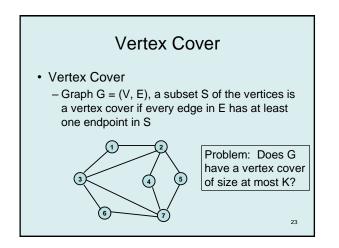

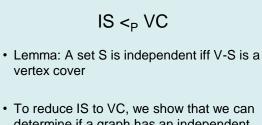

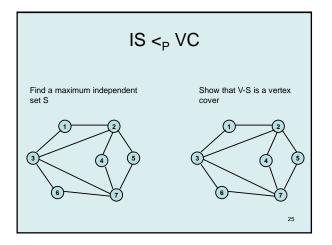

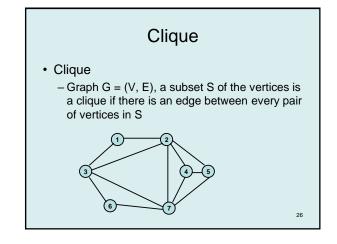

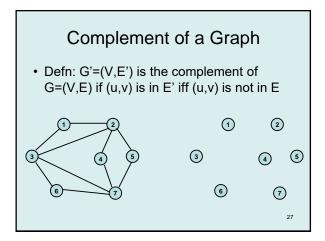

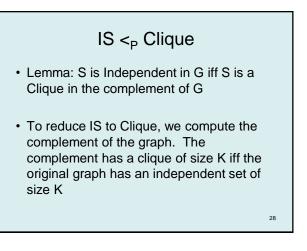

determine if a graph has an independent set of size K by testing for a Vertex cover of size n - K

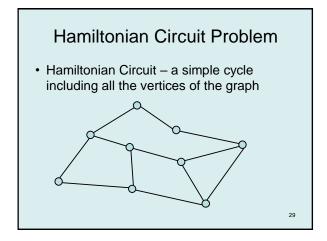

24

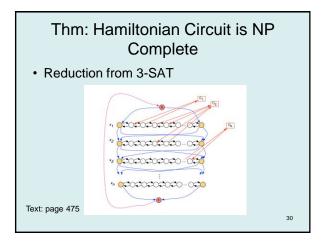

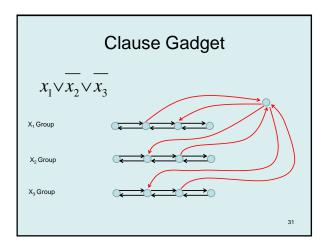

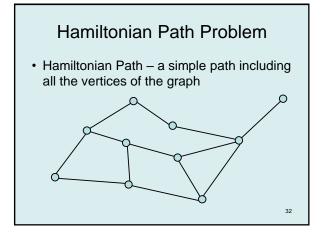

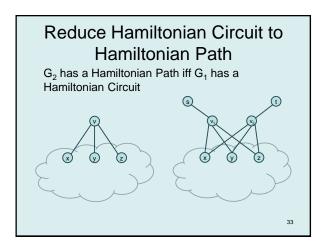

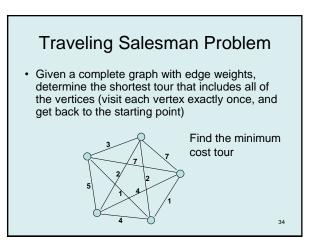

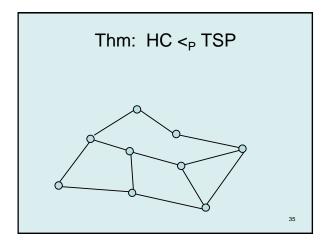

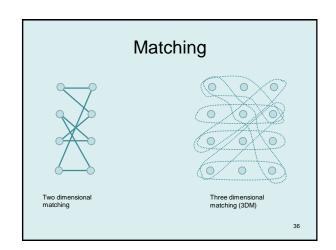

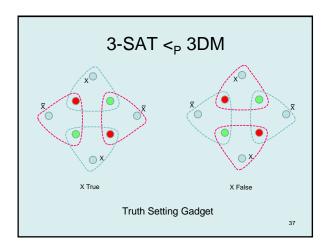

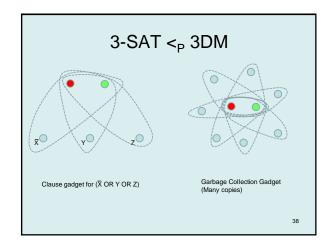

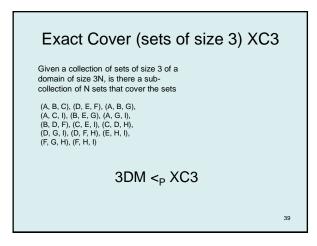

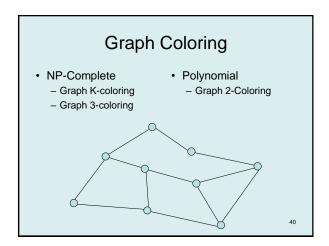

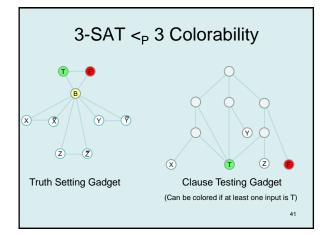

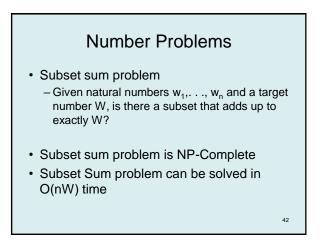

XC3 <_P SUBSET SUM

Idea: Represent each set as a large integer, where the element x_i is encoded as D^i where D is an integer

 $\{x_3,\,x_5,\,x_9\} => \mathsf{D}^3 + \mathsf{D}^5 + \mathsf{D}^9$

Does there exist a subset that sums to exactly $D^1 + D^2 + D^3 + \ldots + D^{n\cdot 1} + D^n$

Detail: How large is D? We need to make sure that we do not have any carries, so we can choose D = m+1, where m is the number of sets.

Integer Linear Programming

- Linear Programming maximize a linear function subject to linear constraints
- Integer Linear Programming require an integer solution
- NP Completeness reduction from 3-SAT
 Use 0-1 variables for x,'s

44

46

Constraint for clause: $(x_1 \lor \overline{x_2} \lor \overline{x_2})$

 $x_1 + (1 - x_2) + (1 - x_3) > 0$

Scheduling with release times and deadlines (RD-Sched)

- Tasks, {t₁, t₂, . . . t_n}
- Task t_{j} has a length $l_{j},$ release time r_{j} and deadline d_{i}
- Once a task is started, it is worked on without interruption until it is completed
- Can all tasks be completed satisfying constraints?

45

Subset Sum $<_P$ RD-Sched • Subset Sum Problem $-\{s_1, s_2, \dots, s_N\}$, integer K₁ - Does there exist a subset that sums to K₁? - Assume the total sums to K₂
