CSE 421 Algorithms

Richard Anderson Lecture 12 Recurrences

Announcements

- Midterm
 - Monday, Nov 2, in class, closed book
 - Through section 5.2

Divide and Conquer

- Recurrences, Sections 5.1 and 5.2
- Algorithms
 - Counting Inversions (5.3)
 - Closest Pair (5.4)
 - Multiplication (5.5)
 - FFT (5.6)

Divide and Conquer

```
Array Mergesort(Array a){

n = a.Length;

if (n <= 1)

return a;

b = Mergesort(a[0 .. n/2]);

c = Mergesort(a[n/2+1 .. n-1]);

return Merge(b, c);

}
```

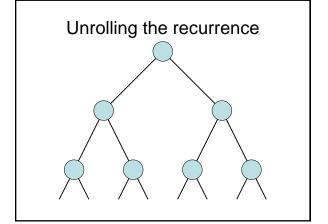

Algorithm Analysis

- · Cost of Merge
- · Cost of Mergesort

$$T(n) \le 2T(n/2) + cn; T(1) \le c;$$

Recurrence Analysis

- · Solution methods
 - Unrolling recurrence
 - Guess and verify
 - Plugging in to a "Master Theorem"

Substitution

Prove $T(n) \le cn (log_2n + 1)$ for $n \ge 1$

Induction: Base Case:

Induction Hypothesis:

A better mergesort (?)

- Divide into 3 subarrays and recursively sort
- · Apply 3-way merge

What is the recurrence?

Unroll recurrence for
$$T(n) = 3T(n/3) + dn$$

$$T(n) = aT(n/b) + f(n)$$

$$T(n) = T(n/2) + cn$$

Where does this recurrence arise?

Solving the recurrence exactly

$$T(n) = 4T(n/2) + cn$$

$$T(n) = 2T(n/2) + n^2$$

$$T(n) = 2T(n/2) + n^{1/2}$$

Recurrences

- Three basic behaviors
 - Dominated by initial case
 - Dominated by base case
 - All cases equal we care about the depth
