Lecture 28

Coping with NP-Completeness

Announcements

- Final exam,
 - Monday, December 12, 2:30-4:20 pm
 - Comprehensive (2/3 post midterm, 1/3 pre midterm)
- Review session
 - Lowe 101
 - Friday, December 9, 2:30-4:20
 - Ben and Max

NP Complete Problems

1. Circuit Satisfiability
2. Formula Satisfiability
 - a. 3-SAT
3. Graph Problems
 - a. Independent Set
 - b. Vertex Cover
 - c. Clique
4. Path Problems
 - a. Hamiltonian cycle
 - b. Hamiltonian path
 - c. Traveling Salesman
5. Partition Problems
 - a. Three dimensional matching
 - b. Exact cover
6. Graph Coloring
7. Number problems
 - a. Subset sum
8. Integer linear programming
9. Scheduling with release times and deadlines

Exact Cover (sets of size 3) XC3

Given a collection of sets of size 3 of a domain of size $3N$, is there a sub-collection of N sets that cover the sets

{(A, B, C), (D, E, F), (A, B, G), (A, C, I), (B, E, G), (A, G, I), (B, D, F), (C, E, I),
(C, D, H), (D, G, I), (D, F, H), (E, H, I), (F, G, H), (F, H, I)}

A B C D E F G H I

Number Problems

- Subset sum problem
 - Given natural numbers w_1, \dots, w_n and a target number W , is there a subset that adds up to exactly W ?
- Subset sum problem is NP-Complete
- Subset Sum problem can be solved in $O(nW)$ time

$XC3 <_p$ SUBSET SUM

Idea: Represent each set as a bit vector, then interpret the bit vectors as integers. Add them up to get the all one's vector.

$\{x_3, x_5, x_9\} \Rightarrow 001010001000$

Does there exist a subset that sums to exactly 111111111111?

Annoying detail: What about the carries?

Integer Linear Programming

- Linear Programming – maximize a linear function subject to linear constraints
- Integer Linear Programming – require an integer solution
- NP Completeness reduction from 3-SAT

Use 0-1 variables for x_i 's

Constraint for clause $x_1 \vee \overline{x_2} \vee \overline{x_3}$

$$x_1 + (1 - x_2) + (1 - x_3) > 0$$

Scheduling with release times and deadlines

- Tasks T_1, \dots, T_n with release time r_i , deadline d_i , and work w_i
- Reduce from Subset Sum
 - Given natural numbers w_1, \dots, w_n and a target number K , is there a subset that adds up to exactly K ?
 - Suppose the sum $w_1 + \dots + w_n = W$
- Task T_i has release time 0 and deadline $W+1$
- Add an additional task with release time K , deadline $K+1$ and work 1

Coping with NP-Completeness

- Approximation Algorithms
- Exact solution via Branch and Bound
- Local Search

Multiprocessor Scheduling

- Unit execution tasks
- Precedence graph
- K-Processors

- Polynomial time for $k=2$
- Open for $k = \text{constant}$
- NP-complete if k is part of the problem

Highest level first is 2-Optimal

Choose k items on the highest level

Claim: number of rounds is at least twice the optimal.

Christofides TSP Algorithm

- Undirected graph satisfying triangle inequality

1. Find MST
2. Add additional edges so that all vertices have even degree
3. Build Eulerian Tour

Christophies Algorithm

Bin Packing

- Given N items with weight w_i , pack the items into as few unit capacity bins as possible
- Example: .3, .3, .3, .3, .4, .4

First Fit Packing

- First Fit
 - Theorem: $FF(I)$ is at most $17/10 \text{ Opt}(I) + 2$
- First Fit Decreasing
 - Theorem: $FFD(I)$ is at most $11/9 \text{ Opt}(I) + 4$

Branch and Bound

- Brute force search – tree of all possible solutions
- Branch and bound – compute a lower bound on all possible extensions
 - Prune sub-trees that cannot be better than optimal

Branch and Bound for TSP

- Enumerate all possible paths
- Lower bound, Current path cost plus MST of remaining points
- Euclidean TSP
 - Points on the plane with Euclidean Distance
 - Sample data set: State Capitals

Local Optimization

- Improve an optimization problem by local improvement
 - Neighborhood structure on solutions
 - Travelling Salesman 2-Opt (or K-Opt)
 - Independent Set Local Replacement
