# Crime Warning

Be notified of crimes and other important events around you as they happen

## Overall Problem

Many people are victims of crime. Many cases can be prevented with a crime warning system that disseminated information fast to people nearby.

## Our Solution

• A location-specific cell phone application that displays crimes or other safety information for the surrounding area
• Provides a map that displays events and trends for any area
• Sends the customer notifications of crimes or other events as they happen
• Allows the customer to report information too, either by typing or by voice recording
• Messages can be sent to pre-defined instant messaging groups
• Messages can also be sent to special, dynamic instant message groups that determine who is nearby

## Features

View Map of the Surrounding Area

Receive Notification about an Event

Sending a Report about an Event

## Design Iteration
