# Problem

A lack of awareness about the long-term implications of noise exposure

**15%** of Americans between the ages of 20 and 69 experience hearing loss that may have been caused by **noise at work or during leisure activities.**

Studies on the health consequences of noise have indicated that noise **elevates heart rate, blood pressure, vasoconstriction, and stress hormone levels.**

Meditation produces **long-lasting changes** in brain activity.

Areas involved in **attention, working memory, learning, and conscious perception** are improved.

130+ dbs. — < 1 minute

115 dbs. — 15 minutes

105 dbs. — 1 hours

95 dbs. — 4 hours

85 dbs. — 8 hours

70 dbs.

50 dbs.

Noise exposure is **cumulative**;  
**Awareness** is key.

# Contextual Inquiry

A photograph of two men sitting at a round wooden table in a cafe. The man on the left, wearing a dark blue long-sleeved shirt, is smiling and gesturing with his hands while looking at a laptop. The man on the right, wearing a dark blue hoodie with a green 'SUPR BOW' logo, is also smiling and looking at the laptop. On the table are a laptop, a cup of coffee, and two smartphones. In the background, other people are seated at tables near large windows, and a black suitcase is visible on the floor.

**Very noisy** work environment

**Some control** over exposure levels

**Moderately noisy** work environment

**Lacks control** of his noise exposure

Dartmouth student who is exposed to **noisy social environments** multiple days per week

**Has control** over exposure levels

# Takeaways

Users **don't want an external device** that would inhibit normal work tasks

Generally aware of risks, **unaware of implications**

**Varying levels of control** over exposure

Interested in understanding **patterns of exposure** and knowing implications

# Tasks

# Measure and Record

Measure noise level at **frequent** and **regular** intervals throughout the day.

# Display Current “Soundscape”

Display the **current** noise level and report safe exposure time.

# Display Data Over Time

Display noise exposure data over an **extended timescale** (day/month/year).

Indicate **patterns in behavior**.

# Adapt Behavior

Make effort to **minimize risky exposure** and  
**maximize “zen time”**.

# Integrate crowd-sourced data

Gain **environmental awareness** using data  
from user base.

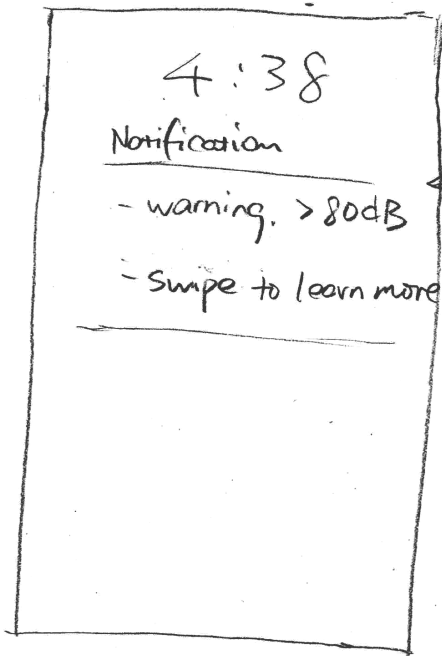

**Designs**

# Design #1

# Storyboards

# Tracking Zen

1

Jimmy goes through his day while passively recording the sound of his environments

2

At the end of the day, he checks the data he's gathered and sees he needs to have more "zen" in his day.

3

Jimmy makes some adjustments the next day in his routine to lessen the amount of noise he encounters.

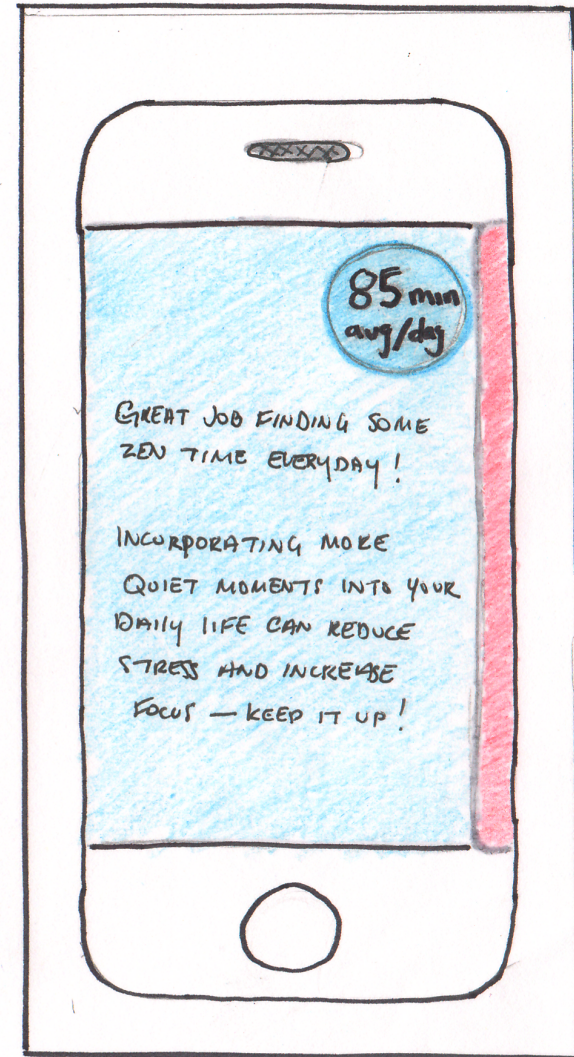

4

He is happy to see that his efforts to reduce the noise in his environment have paid off!

# Exposure Analysis

**Questions?**
