

# CSE 440: Introduction to HCI

User Interface Design, Prototyping, and Evaluation

Lecture 01:  
Introduction and  
Personal Informatics

Tuesday / Thursday  
12:00 to 1:20

James Fogarty  
Kailey Chan  
Dhruv Jain  
Nigini Oliveira  
Chris Seeds  
Jihoon Suh

# What Is This Course?

Time for a Door Quiz:

Say out loud what action you use to open the door

Push

Pull

# Door Quiz

# Door Quiz

# Door Quiz

# Door Quiz

# Door Quiz

# Door Quiz

# Door Quiz

# Door Quiz

# What is so Special about Computers?

Nothing! It is about good designs and bad designs

We make push/pull decisions many times per day

We all encounter doors that do this badly

We all see signs that do not change what we do

# Signs Do Not Help

# Signs Do Not Help

# What is so Special about Computers?

Yet we blame ourselves

Absolutely everything we  
encounter in the made  
world was designed

Too often poorly designed

Read this book

Be warned you cannot  
unread it, you become angry

# Iterative Human-Centered Design

This is a course about process

This is not a course about ‘good’ interfaces or rules that you should follow in design

Rapid iteration and exploration is the most important and effective tool for effective design

“Enlightened trial and error succeeds over the planning of the lone genius” – Peter Skillman, IDEO

# Project Overview

The core of this course is a group project

Propose and do an intense end-to-end design

Getting the Right Design

Getting the Design Right

Communicating the Design

Not an implementation course

# Design Research & Task Analysis

Observe practices and understand needs

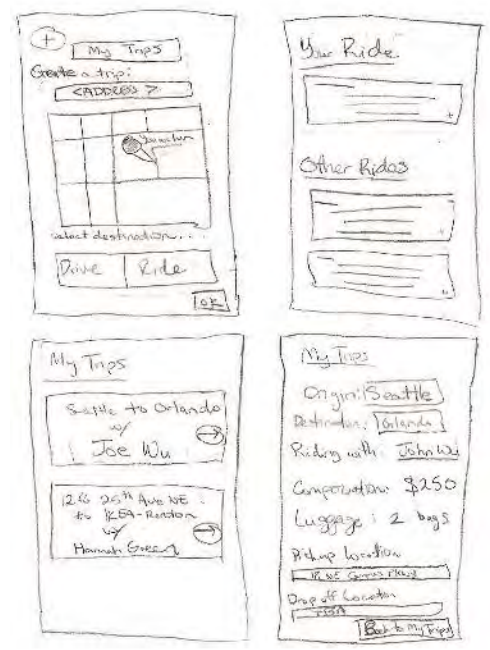

Consumester

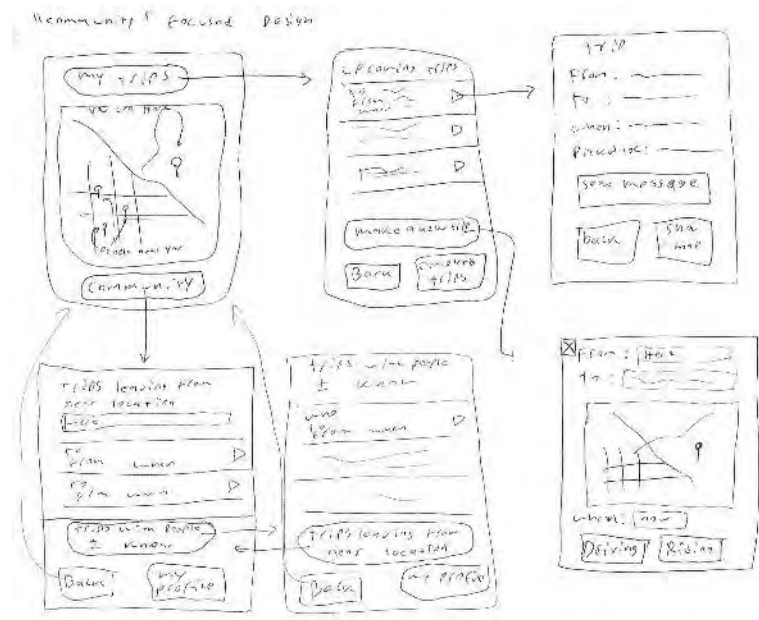

FoodWatch

# Sketching & Storyboarding

RideAlong

# Sketching & Storyboarding

RouteMyRun

# Low-Fidelity Prototyping & Testing

RideAlong

# Digital Mockup

Balance

.calm

# Video Prototypes

# Studio Time in Section and Lecture

This course is designed around rapid feedback

Section is primarily studio time with the staff

Groups will be formed within section

Your team always brings a milestone to studio

Participation is a critical component of the course

Tuesday milestones

Your team always has a milestone due

Class may include project time or activity

Seek feedback (e.g., via office hours)

# Staying in Touch

Web: <http://www.cs.washington.edu/440>

You are responsible for calendar

Email Us: [cse440-staff \[at\] cs.washington.edu](mailto:cse440-staff@cs.washington.edu)

Email: You are responsible for course email list

Office Posted on Calendar

Hours: Also By Appointment

Canvas: I hate Canvas so much but  
we have to use it for some things

Panopto: I will probably mess it up at least once

# Calendar Overview

The screenshot shows a web browser window with the URL <https://courses.cs.washington.edu/courses/cse440/17au/calendar.html>. The page title is "CSE 440 - Introduction to HCI - Autumn 2017". The main heading is "Calendar". A notice states: "This page is still being migrated and developed. All content remains subject to change." The calendar is organized by date, with events listed for each day. Events are color-coded: pink for "Night Away", orange for "Lecture", green for "Project Presentation", yellow for "Office Hour", and blue for "Section".

Date	Event	Time	Location
Sep 25	Night Away		
Sep 26	Night Away		
Sep 27	Night Away		
Sep 28	Introduction, Project Overview, and Personal Informatics	12:00 - 1:20	PAA A110

# GitHub Repository

The website, assignments, and other materials are being run from a GitHub repository

<https://github.com/uwcse440/web-cse440-au17/>

You will contribute when posting your projects

You can otherwise contribute if you see the opportunity

# Grading

We provide a grading scale, but it is subjective

Design is subjective, and so is this course

Wow us with your work, not with complaining

Entire project process is designed for feedback

Milestone grades mean you did the milestone

You still must act on feedback as part of continuing to refine and develop your project

A focus on “doing the work” and “getting feedback” means final grades are more “quality of result”

# Grading

Group Project: 65%

3% Assignment 1

21% Assignment 2: Getting the Right Design

Final Report 15%, Milestones 6%

14% Assignment 3: Getting the Design Right

Final Report 10%, Milestones 4%

15% Assignment 4: Communicating the Design

Website 5%, Video Prototype 5%, Poster 5%

12% Presentations

Getting the Right Design 5%,

Getting the Design Right 5%, Individual 2%

Exam: 25%

Individual Readings: 5%

Participation: 5%

# Submissions

Many assignments are due “night before class”

Canvas will operationalize this as 11:59pm

A bit more slack, but definitely “before I wake up”

We need your submissions as part of our preparation for in-class feedback

“Day of class”, “just before class”, or “in class” are all unacceptable, risking zero credit

Do not use this to undermine team work

# “Now” vs “When You Need It” Content

This course has both, we will try to distinguish

Several assigned readings will be posted

- Intentionally minimal but critical

- May be on exam

- Small reading report assignment

Additional resources will be made available

- If you find others you want to share, email us

Project Bids Due Wednesday Night

Groups Assigned Thursday

Group Brainstorming in Section Friday

# Assignment 1a: Project Brainstorm

You have an assignment due tonight:

<https://courses.cs.washington.edu/courses/cse440/17au/assignments/assignment1/>

Propose 3 project domains, problems, goals:

These are starting points for brainstorming

Submit online:

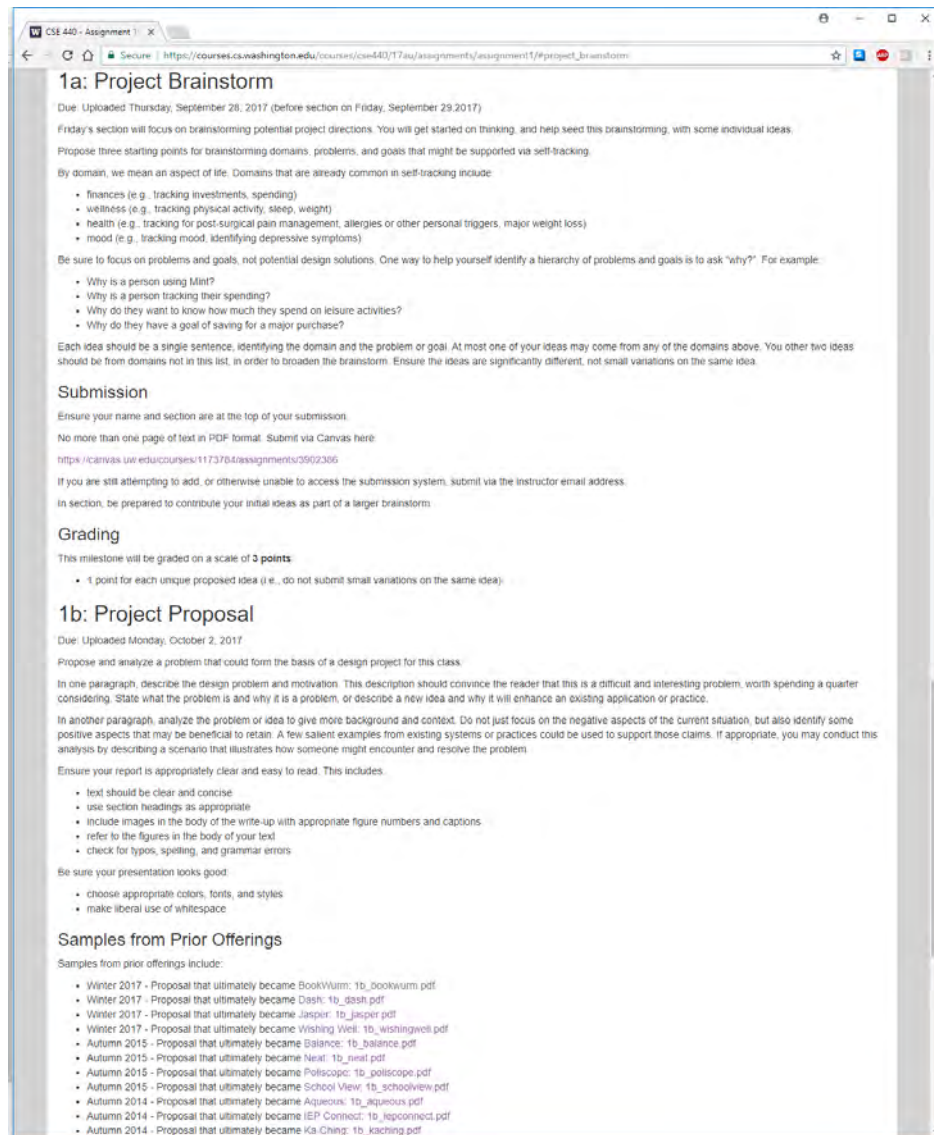

This proves that you did your preparation

If unable to access Canvas, submit via email

Bring to section Friday:

You have a lot more brainstorming ahead of you

# Assignment 1a: Project Brainstorm

CSE 440 - Assignment 1a

## 1a: Project Brainstorm

Due: Uploaded Thursday, September 28, 2017 (before section on Friday, September 29, 2017)

Friday's section will focus on brainstorming potential project directions. You will get started on thinking, and help seed this brainstorming, with some individual ideas.

Propose three starting points for brainstorming domains, problems, and goals that might be supported via self-tracking.

By domain, we mean an aspect of life. Domains that are already common in self-tracking include:

- finances (e.g., tracking investments, spending)
- wellness (e.g., tracking physical activity, sleep, weight)
- health (e.g., tracking for post-surgical pain management, allergies or other personal triggers, major weight loss)
- mood (e.g., tracking mood, identifying depressive symptoms)

Be sure to focus on problems and goals, not potential design solutions. One way to help yourself identify a hierarchy of problems and goals is to ask "why?" For example:

- Why is a person using Mint?
- Why is a person tracking their spending?
- Why do they want to know how much they spend on leisure activities?
- Why do they have a goal of saving for a major purchase?

Each idea should be a single sentence, identifying the domain and the problem or goal. At most one of your ideas may come from any of the domains above. You other two ideas should be from domains not in this list, in order to broaden the brainstorm. Ensure the ideas are significantly different, not small variations on the same idea.

### Submission

Ensure your name and section are at the top of your submission.

No more than one page of text in PDF format. Submit via Canvas here:

<https://canvas.uw.edu/courses/1173784/assignments/3502306>

If you are still attempting to add, or otherwise unable to access the submission system, submit via the instructor email address.

In section, be prepared to contribute your initial ideas as part of a larger brainstorm.

### Grading

This milestone will be graded on a scale of **3 points**:

- 1 point for each unique proposed idea (i.e., do not submit small variations on the same idea)

## 1b: Project Proposal

Due: Uploaded Monday, October 2, 2017

Propose and analyze a problem that could form the basis of a design project for this class.

In one paragraph, describe the design problem and motivation. This description should convince the reader that this is a difficult and interesting problem, worth spending a quarter considering. State what the problem is and why it is a problem, or describe a new idea and why it will enhance an existing application or practice.

In another paragraph, analyze the problem or idea to give more background and context. Do not just focus on the negative aspects of the current situation, but also identify some positive aspects that may be beneficial to retain. A few salient examples from existing systems or practices could be used to support those claims. If appropriate, you may conduct this analysis by describing a scenario that illustrates how someone might encounter and resolve the problem.

Ensure your report is appropriately clear and easy to read. This includes:

- text should be clear and concise
- use section headings as appropriate
- include images in the body of the write-up with appropriate figure numbers and captions
- refer to the figures in the body of your text
- check for typos, spelling, and grammar errors

Be sure your presentation looks good:

- choose appropriate colors, fonts, and styles
- make liberal use of whitespace

### Samples from Prior Offerings

Samples from prior offerings include:

- Winter 2017 - Proposal that ultimately became BookWurm: 1b\_bookwurm.pdf
- Winter 2017 - Proposal that ultimately became Dash: 1b\_dash.pdf
- Winter 2017 - Proposal that ultimately became Jasper: 1b\_jasper.pdf

- Autumn 2015 - Proposal that ultimately became Balance: 1b\_balance.pdf
- Autumn 2015 - Proposal that ultimately became Next: 1b\_next.pdf
- Autumn 2015 - Proposal that ultimately became Poliscop: 1b\_poliscop.pdf
- Autumn 2015 - Proposal that ultimately became School View: 1b\_schoolview.pdf
- Autumn 2014 - Proposal that ultimately became Aqueous: 1b\_aqueous.pdf
- Autumn 2014 - Proposal that ultimately became IEP Connect: 1b\_iepconnect.pdf
- Autumn 2014 - Proposal that ultimately became Ka Ching: 1b\_kaching.pdf

# Assignment 1b: Project Proposal

You have an assignment due Monday night:

<https://courses.cs.washington.edu/courses/cse440/17au/assignments/assignment1/>

One page of text:

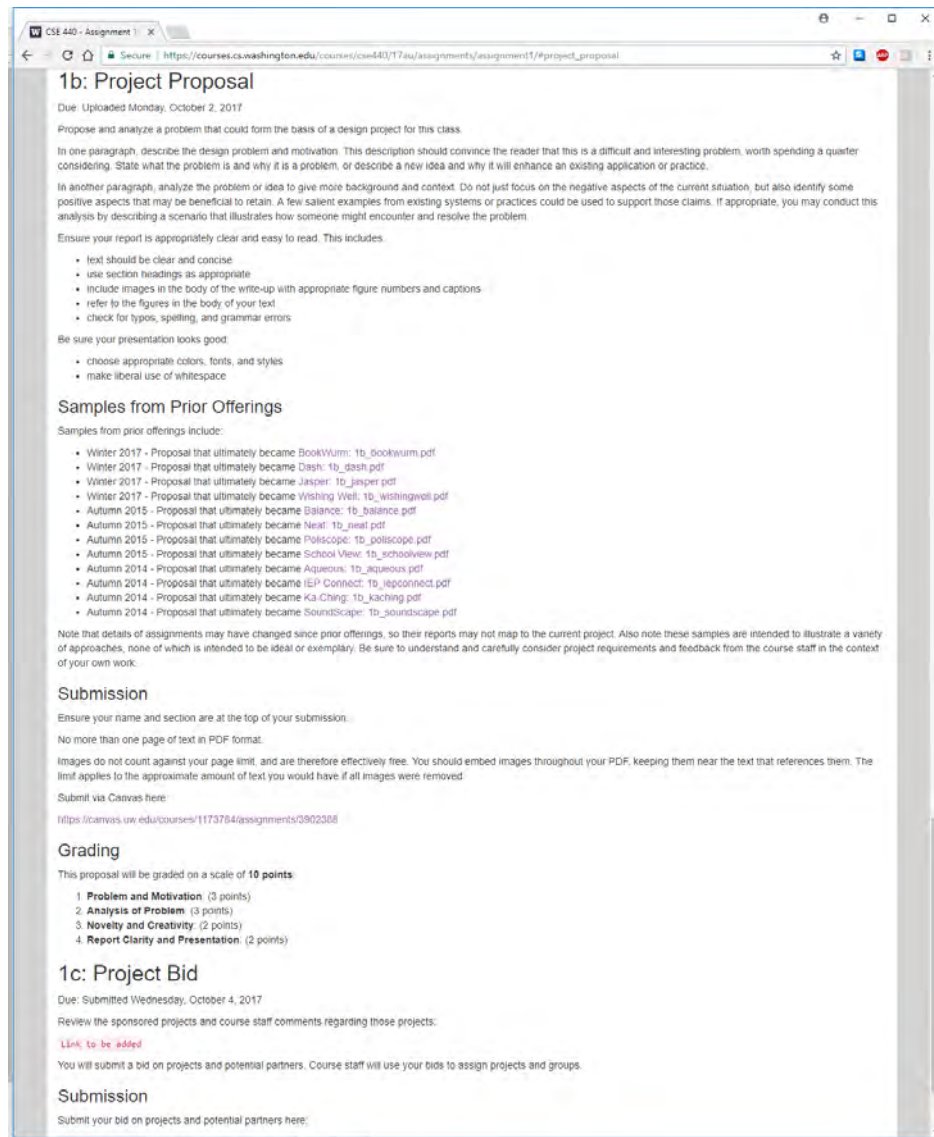

Problem and Motivation

Analyze the problem or idea (e.g., a scenario)

Submit online:

Sponsored Projects will be posted for bidding

# Assignment 1b: Project Proposal

CSE 440 - Assignment 1b: Project Proposal

Due: Uploaded Monday, October 2, 2017

Propose and analyze a problem that could form the basis of a design project for this class.

In one paragraph, describe the design problem and motivation. This description should convince the reader that this is a difficult and interesting problem, worth spending a quarter considering. State what the problem is and why it is a problem, or describe a new idea and why it will enhance an existing application or practice.

In another paragraph, analyze the problem or idea to give more background and context. Do not just focus on the negative aspects of the current situation, but also identify some positive aspects that may be beneficial to retain. A few salient examples from existing systems or practices could be used to support those claims. If appropriate, you may conduct this analysis by describing a scenario that illustrates how someone might encounter and resolve the problem.

Ensure your report is appropriately clear and easy to read. This includes:

- text should be clear and concise
- use section headings as appropriate
- include images in the body of the write-up with appropriate figure numbers and captions
- refer to the figures in the body of your text
- check for typos, spelling, and grammar errors

Be sure your presentation looks good:

- choose appropriate colors, fonts, and styles
- make liberal use of whitespace

### Samples from Prior Offerings

Samples from prior offerings include:

- Winter 2017 - Proposal that ultimately became BookWurm: 1b\_bookwurm.pdf
- Winter 2017 - Proposal that ultimately became Dash: 1b\_dash.pdf
- Winter 2017 - Proposal that ultimately became Jasper: 1b\_jasper.pdf
- Winter 2017 - Proposal that ultimately became Wishing Well: 1b\_wishingwell.pdf
- Autumn 2015 - Proposal that ultimately became Balance: 1b\_balance.pdf
- Autumn 2015 - Proposal that ultimately became Nest: 1b\_nest.pdf
- Autumn 2015 - Proposal that ultimately became Polscope: 1b\_polscope.pdf
- Autumn 2015 - Proposal that ultimately became School View: 1b\_schoolview.pdf
- Autumn 2014 - Proposal that ultimately became Aqueduct: 1b\_aqueduct.pdf
- Autumn 2014 - Proposal that ultimately became EIP Connect: 1b\_eipconnect.pdf
- Autumn 2014 - Proposal that ultimately became Ka-Ching: 1b\_kaching.pdf
- Autumn 2014 - Proposal that ultimately became SoundScope: 1b\_soundscope.pdf

Note that details of assignments may have changed since prior offerings, so their reports may not map to the current project. Also note these samples are intended to illustrate a variety of approaches, none of which is intended to be ideal or exemplary. Be sure to understand and carefully consider project requirements and feedback from the course staff in the context of your own work.

### Submission

Ensure your name and section are at the top of your submission.

No more than one page of text in PDF format.

Images do not count against your page limit, and are therefore effectively free. You should embed images throughout your PDF, keeping them near the text that references them. The limit applies to the approximate amount of text you would have if all images were removed.

Submit via Canvas here:

<https://canvas.uw.edu/courses/1173784/assignments/3902388>

### Grading

This proposal will be graded on a scale of **10 points**:

1. **Problem and Motivation** (3 points)
2. **Analysis of Problem** (3 points)
3. **Novelty and Creativity** (2 points)
4. **Report Clarity and Presentation** (2 points)

### 1c: Project Bid

Due: Submitted Wednesday, October 4, 2017

Review the sponsored projects and course staff comments regarding those projects:

[Link to be added](#)

You will submit a bid on projects and potential partners. Course staff will use your bids to assign projects and groups.

### Submission

Submit your bid on projects and potential partners here:

Assignment 1: Project Proposal

Assignment 1a: Due for Friday

Assignment 1b: Due for Tuesday

Some Reflection

Self-Tracking and Relevant Background

# Some Reflection

This will not be an easy course

Students have said this was their most intense course

You have two deadlines per week, every week

But I believe in everything that is included

This course challenges some aspects of what the CSE curriculum has taught you is important

It will be what you make it

# People Really Get It

“Very good class that every engineer should have to take. Good perspectives and made me think outside my comfort zone.”

“The focus on projects and fieldwork was very well suited to my learning style. I greatly enjoyed this format. The theory and techniques taught in class were directly applicable to the projects we were doing and were usually timed very well. That is, usually the topics presented in lecture were relevant to the current deliverable or the next deliverable.”

# People Really Get It

“I can't believe I'm saying this, but I found the lectures a huge part of what I learned in this course. They were useful and organized, and each one had a clear message and topic. The assignments were an excellent extension of these themes.”

“Fieldwork and iterative assignments really taught me how important the design process is.”

# Group Work is Hard Work

“the project placed groups in a realistic situation and forced us to work together effectively and practice relevant concepts/strategies”

“The group work was distracting because of the lack of unity and sense of purpose. We all had different priorities and purposes for taking the class and this made it really hard to be on the same page for the project which was the biggest part of this class.”

# Group Work is Hard Work

“Have groups do a team charter - outlining what they expect from one another as teammates. I took a project management course and when working in a group with individuals you've never worked with, the team charter may help break the ice easier when everyone can say what their expectations are.”

“... I think that working effectively as a team was the most challenging part of this class ...”

# And it is not for Everybody

What aspects of this class detracted from your learning?

Finding strangers in malls & coffee shops was a major hurdle

What suggestions do you have for improving the class?

Don't exclude the two most available sources of people - friends & university students

# Adding and Dropping

## Attempting to Add

Must talk to me after class

Will email today, attempt to finalize quickly

Must enforce a hard enrollment cap

## Considering Dropping

Do so before we assign teams, and tell us

## Section switch availability

We may need help in balancing sections

# Background in Personal Informatics

## Some Definitions

## What is the Point?

## What is the Problem?

Chester, T. (2013). *The Sunday Times*.  
“You Are Just a Number”

# What is Personal Informatics

“We define personal informatics systems as those that help people collect personally relevant information for the purpose of self-reflection and gaining self-knowledge. There are two core aspects to every personal informatics system: **collection** and **reflection**.”

# What is Quantified Self

“The Quantified Self is an international collaboration of users and makers of self-tracking tools.”

“Our aim is to help people get meaning out of their personal data.”

“Self knowledge through numbers.”

Wolf G. (2009). *Wired Magazine*.

“Know Thyself: Tracking Every Facet of Life, from Sleep to Mood to Pain, 24/7/365”

Examining serious self-trackers, as they represent the early adopters

The screenshot shows a webpage from Quantified Self. The header includes the logo 'QS Quantified Self' with the tagline 'self knowledge through numbers', a search bar, and navigation links for 'ABOUT', 'VIDEOS', and 'FORUMS'. The main article is titled 'Mark Moschel on Tracking and Dunking' and is dated January 30, 2014. The text describes how Mark Moschel, a basketball fan, decided to learn to dunk a basketball and how he used self-tracking for this goal. Below the text is a video player showing Mark Moschel speaking at a podium. The video player includes a play button, a progress bar at 11:24, and 'HD' and 'vimeo' logos. Below the video are social sharing options for Twitter, Facebook, Google+, Tumblr, LinkedIn, and Email. The right sidebar features a banner for the 'Quantified Self Europe Conference' held in Amsterdam from May 10-11, 2014, and a list of 'QS Meetup Groups' for various cities including Toronto, Vancouver, Montreal, Ottawa, London, and San Diego.

# Building Custom Tools

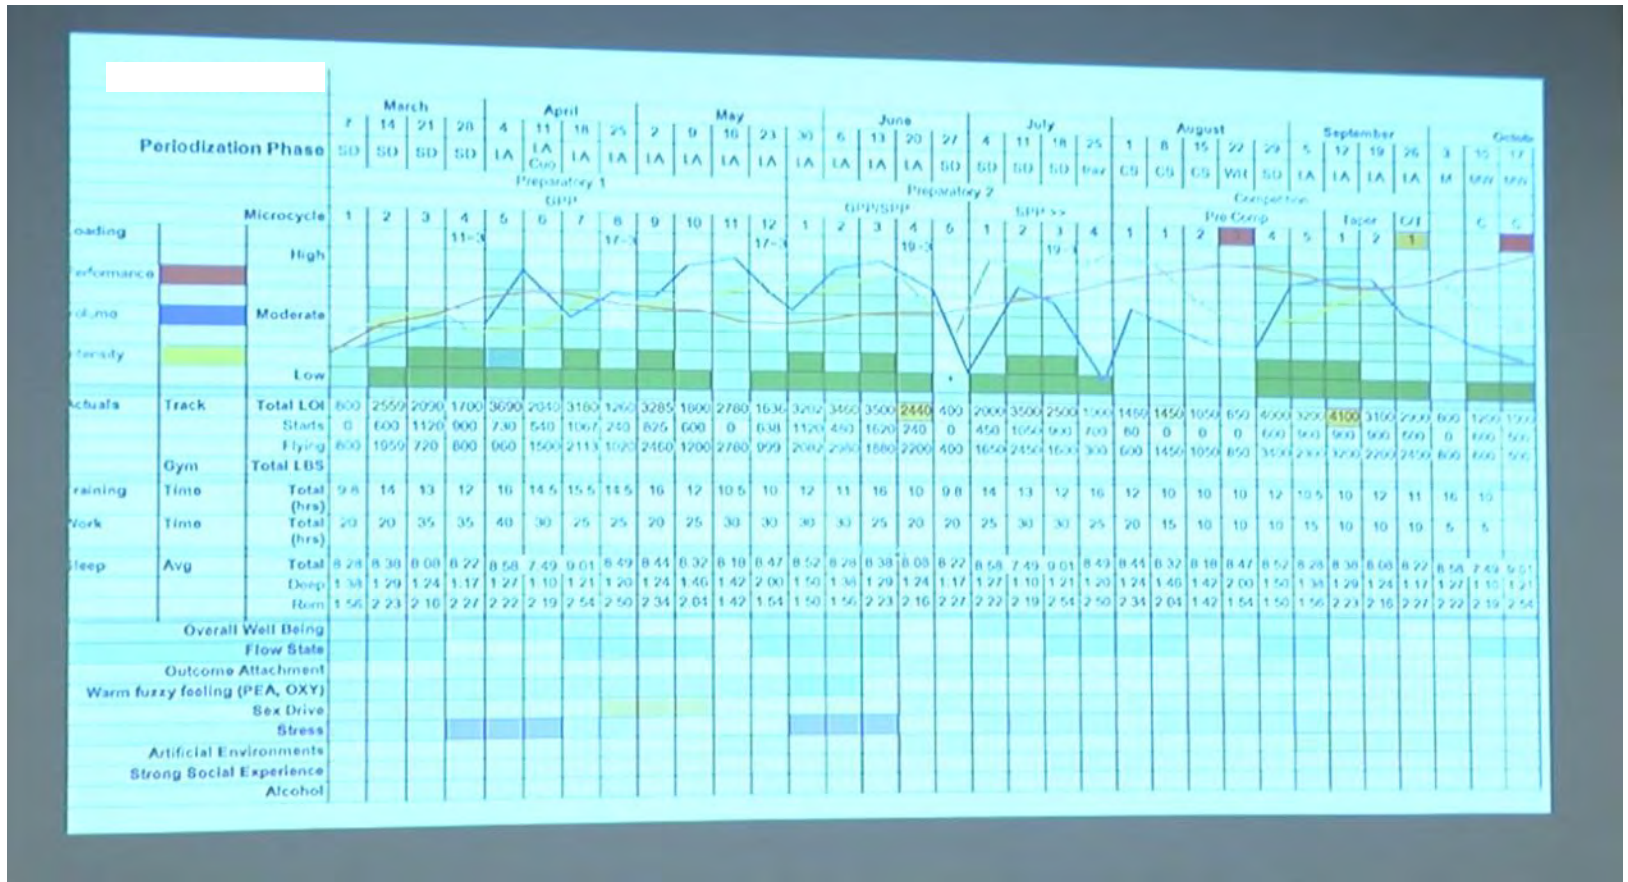

Captures smile via wearable sensing  
Provides real-time feedback

Captures snoring via mobile app  
Provides data visualization

Choe E.K., Lee N.B., Lee B., Pratt W., Kientz J.A. CHI 2014.  
“Understanding Quantified Selfers’ Practices in Collecting and Exploring Personal Data”

# Custom Visualizations

Choe E.K., Lee N.B., Lee B., Pratt W., Kientz J.A. CHI 2014.

“Understanding Quantified Selfers’ Practices in Collecting and Exploring Personal Data”

# Why are they Building Custom Tools?

Desirable features are not supported

Collect and reflect on the data using a single tool

Perform self-experimentation

Barriers to success

Tracking too many things

Not tracking triggers and context

Lacking scientific rigor

# Tracking Too Many Things

“I can honestly say that I’ve made the classic **newbie self-tracking mistake** which is that I track everything. I didn't know exactly what to track, so I tracked caffeine, dairy, wheat, sugar, nuts, fruit, vegetables, meat, chicken, fish, alcohol supplements...”

People burn out on self-tracking

# Not Tracking Triggers and Context

“I was trying to track all these symptoms and I was completely ignoring the cause...”

People lack clues on what to track

Missing information on how to improve outcome

They track the wrong information

# Lacking Scientific Rigor

Conduct self-experimentations without control or without addressing confounding factors

And they conduct flawed experiments

# Barriers and Negative Nudges

*“It was too time consuming and tedious. I also did not know what to enter if I ate out, so I often did not enter data and that compounded. I also felt embarrassed to do it in front of friends so I stopped.”*

## Negative Nudges:

Contrasting difficulty of entry

Judgment and choosing not to journal

Stigma and journaling

Lack or decline in social support

Felicia Cordeiro, Daniel A. Epstein, Edison Thomas, Elizabeth Bales, Arvind K. Kagannathan, Gregory D. Abowd, James Fogarty. CHI 2015. Barriers and Negative Nudges: Exploring Challenges in Food Journaling

# A Model of Lived Informatics

Extends 5-stage model to surface additional opportunities and challenges in lifecycle

Returning to a tool (e.g., short/long lapse)

Changing tools (e.g., due to burden)

Changing goals (e.g., due to discovery)

# Your Challenge

People invest tremendous effort for little value, are frustrated by failure

Do better, help people achieve their goals, solve real problems

Go beyond the data fetish

Understand the problems people face

Find the role for interactive technology

# Your Challenge

Explore **tracking beyond the self**:

Many forms:

wearable sensors, phone and watch applications, appliances and artifacts in the environment, hybrid

Many social contexts:

co-located relationships, remote relationships, communities organizing, seeking help from peers, seeking help from experts

New forms of interaction:

conversational interfaces, tangible interfaces, ubiquitous computing interfaces

# Some Reflection

We have high expectations

We want you to do cool stuff

But we are also enthusiastic and we listen

Email us, point out opportunities, ask questions

If you are not onboard, please drop now

Please email us so that we know a spot opened

# Quantity versus Quality

One class told they will be graded on quality, another on quantity

Bayles and Orland, 2001

# Quantity versus Quality

The quantity class produces better pots. Why?

# Quantity versus Quality

The quantity class produces better pots. Why?

“While the quantity group was busily churning out piles of work—and learning from their mistakes—the quality group had sat theorizing about perfection, and in the end had little more to show for their efforts than grandiose theories and a pile of dead clay”

# Perfect Shopping Cart?

# Perfect Shopping Cart?

## Several design flaws

Kids will slide and fall out of that seat

Where to put bags of dog food, cases of beer?

Hook design with reusable bags

Self-scanning challenges with theft

## Focus on the design process

Designs always have limitations and tradeoffs

# Design as Choice

# Design as Choice

In the diamond, what are two openings for creativity?

Why is your design research so important?

# Sketching in Design (2007)

“Design as Choice”

“the creativity that you bring to enumerating meaningfully distinct options from which to choose”

# Sketching in Design (2007)

“Design as Choice”

“the creativity that you bring to defining the criteria, or heuristics, according to which you make your choices”

# Design as Choice

In the diamond, what are two openings for creativity?

Palette of choices

Heuristics to choose

Why is your design research so important?

What you learn directly informs both of these, shaping everything you do this entire quarter

# Design as Choice

## Elaboration

palette of choices

## Reduction

heuristics to choose

# The Design Diamond

# Properties of Sketches

Quick

Timely

Inexpensive

Disposable

Plentiful

Clear Vocabulary

Distinct Gesture

Minimal Detail

Appropriate Refinement

Suggest and Explore

Ambiguous

# Quick

A sketch is quick to make,  
or at least gives that impression

# Timely

A sketch can be provided when needed

# Inexpensive

Cost must not inhibit the ability to explore a concept, especially early in design

# Disposable

If you cannot afford to throw it away,  
then it is not a sketch

Investment is in the process,  
not the physical sketch

But they are not "worthless"

# Plentiful

Sketches do not  
exist in isolation

Meaning and relevance  
is in the context of a  
collection or series

# Clear Vocabulary

The way it is rendered makes it distinctive that it is a sketch (e.g., style, form, signals)

Could be how a line extends through endpoints

Physical sketches have their own vocabulary

# Distinct Gesture

Fluidity of sketches gives them  
a sense of openness and freedom

Opposite of engineering drawing,  
which is tight and precise

vs.

# Minimal Detail

Include only what is required to render the intended purpose or concept

Create JSP for this page

---

Name:

Number:

Category:

Price Range:  to

# Minimal Detail

# Appropriate Degree of Refinement

Make the sketch as refined as the idea

If you have a solid idea,  
make the sketch look  
more defined

If you have a hazy idea,  
make the sketch look  
rougher and less defined

# Suggest and Explore Rather than Confirm

Sketch should act as a catalyst  
to the desired and appropriate behaviors,  
conversations, and interactions

# Ambiguity

Intentionally ambiguous

Value comes from being able to be interpreted in different ways, even by the person who created them

Sketches have holes

# Sketching as Conversation

Requires  
ambiguity

# Sketch vs. Prototype

Sketch	Prototype
Invite	Attend
Suggest	Describe
Explore	Refine
Question	Answer
Propose	Test
Provoke	Resolve
Tentative, non committal	Specific Depiction

The primary differences are in the intent

# ABC News and IDEO's Deep Dive

# Sketching is Not Defined by Ink

Although sketching can often be done in ink, these properties can be found in other forms

Those other forms are therefore sketches

# Sketching the Mouse

# Constructable (2012)

# The Design Diamond

# Idea Oscillation

# Critiquing Sketches is Important

Ideas are both good and bad

Both are useful in design

By making clear what is a bad design,  
we can avoid actually implementing it

Bad ideas help you justify your good ideas

Feedback can turn a good idea into a great idea

Sketching generates too many ideas to implement

# Idea Oscillation

# Iteration Toward a Design

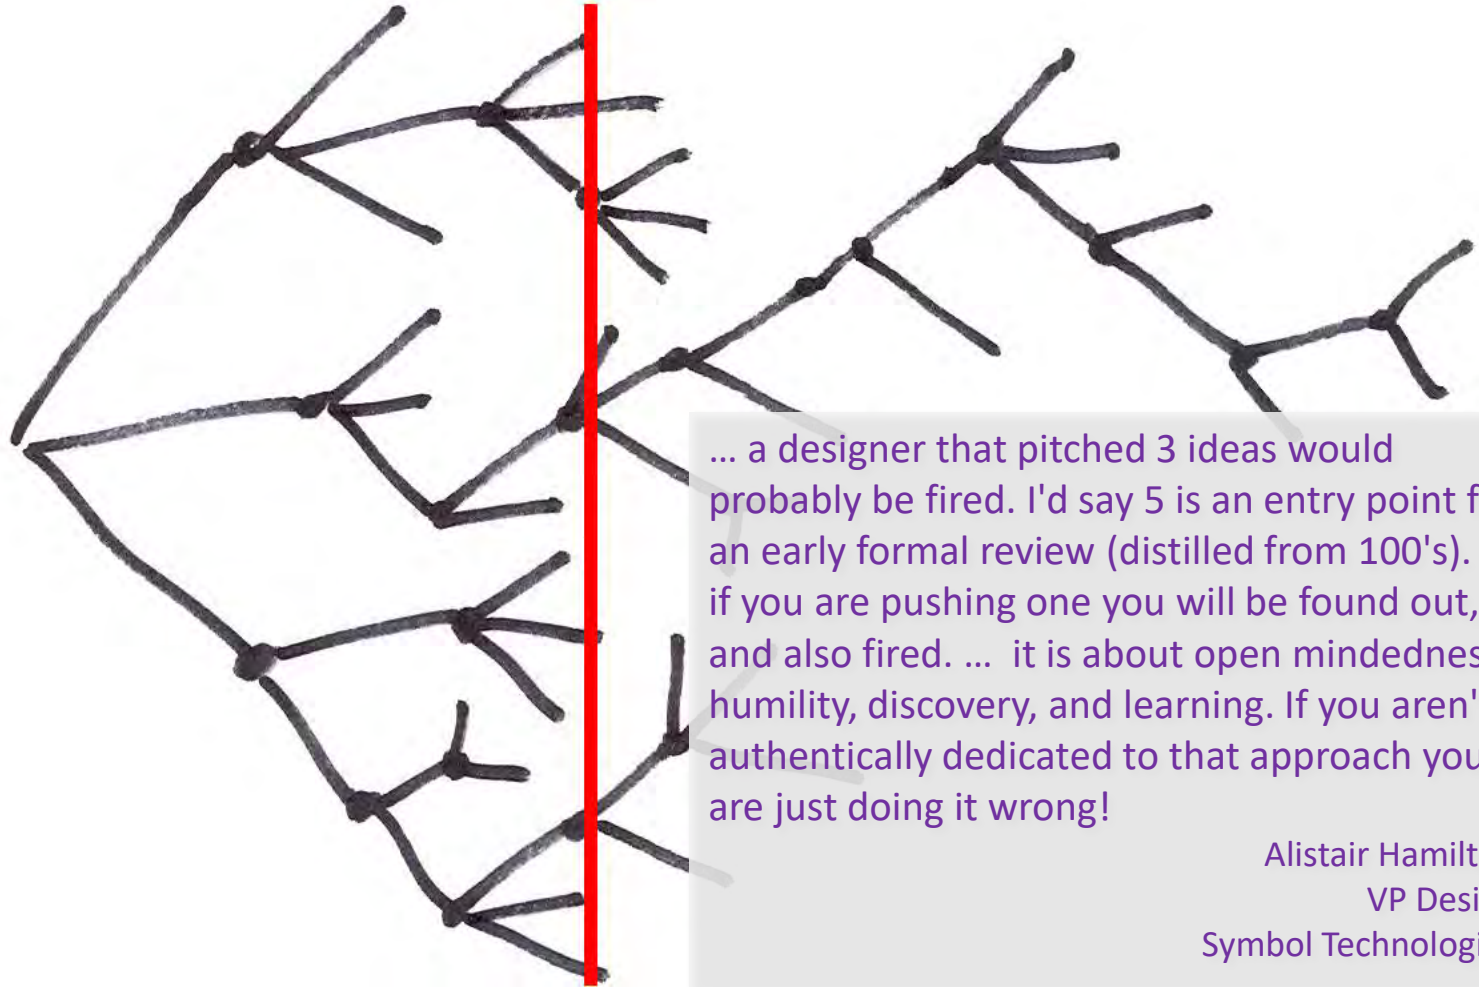

- Sketch
- Prototype

# Exploration of Alternatives

# Exploration of Alternatives

... a designer that pitched 3 ideas would probably be fired. I'd say 5 is an entry point for an early formal review (distilled from 100's). ... if you are pushing one you will be found out, and also fired. ... it is about open mindedness, humility, discovery, and learning. If you aren't authentically dedicated to that approach you are just doing it wrong!

Alistair Hamilton  
VP Design  
Symbol Technologies

# The Converging Path

# Is this a sketch? Why or why not?

# Is this a sketch? Why or why not?

Is this a sketch? Why or why not?

# Is this a sketch? Why or why not?

Is this a sketch? Why or why not?

# Some Evidence

Task:

Create a web banner ad for Ambidextrous magazine.

# Feedback in Parallel or Serial

*Parallel condition*

*Serial condition*

# Procedure

serial  
prototyping  
condition

parallel  
prototyping  
condition

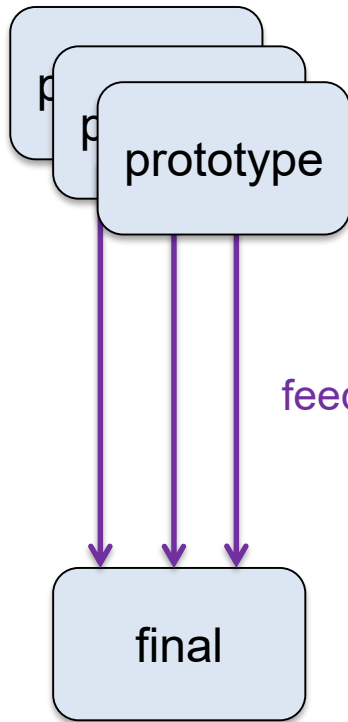

# Parallel: more diverse, better, more clicks

# Share one or share your best?

Share multiple  
condition

Share best  
condition

Make one  
condition

# Share Multiple: better, more clicks

# Some Evidence

## Greater divergence in designs

- Prevents sticking with the first idea

- Allows mashing ideas together

## Alternatives facilitate feedback

- Enable comparison

- Can improve tone of critique

# Sketching and the Design Diamond

The design diamond is fundamental to understanding what you are doing here

Much of your education, including in CSE, has taught you to focus on having the right answer

Here it matters what you do long before the end

Most ideas get thrown out, including yours

Better ideas are great criticism, and frequently would never have come about otherwise

# Amazing Color Changing Card Trick

The colour  
changing  
card trick

Why did I show you that?

# Why did I show you that?

If we are focusing on the wrong thing,  
we can completely miss other important things

Assumptions and pre-conceptions  
play a huge role in how we focus our attention

Today is about this danger when understanding  
the context for which you design technology

# “You Are Not the Customer”

Seems obvious, but...

You have different experiences

You have different terminology

You have different ways of looking at the world

Easy to think of self as typical

Easy to make mistaken assumptions

2c: Design Research Check-In due Thursday 10/12

2d: Design Research Review due Monday 10/16

# Denny 303 on Tuesday 10/10

# Objectives

Be able to:

Enumerate and describe ethnographic principles.

Describe master/apprentice relationship in contextual inquiry, contrast it to other relationships with a participant.

Enumerate and describe contextual inquiry principles.

Describe stages of a contextual inquiry, including withdrawal and return.

Give examples of other design research methods, be able to consider how they might be applied to different design research needs.

# Today

## Administrative

Project Status

Denny 303 on Tuesday 10/10

## Contextual Inquiry and Design Research

Ethnographic Principles

Contextual Inquiry Principles and Practice

Additional Design Research Methods

## Project Team Formation

# Ethnography

Emerged in 1920s as a new anthropology method, exploring why groups think and act as they do

Learn local language, record myths, customs, and ceremonies in much greater detail than prior work

You will likely never perform an ethnography

# Ethnography

Traditional science attempts to understand a group or individual objectively

Understand the subject of study from the outside in a way that can be explained to “anyone”

Ethnography attempts to understand a group or individual phenomenologically

Understand the subject of study as the subject of study understands itself

# Four Ethnographic Principles

Natural settings

Holism

Descriptive

Member point-of-view

# Four Ethnographic Principles

## Natural Settings

Conducted in the setting of the participant

Focus on naturally occurring, everyday action

Cannot use laboratory, experimental settings, or a phone call to gather this type of data

You really do have to go out there and see it

# Four Ethnographic Principles

## Holism

Behavior can only be understood in its larger social context; that is, holistically.

### HOLISTIC

Particular behaviors understood in relation to how they are embedded in the social and historical fabric of everyday life.

Focus on relationship between the parts

# Four Ethnographic Principles

## Descriptive

Study how people actually behave, not how they ought to behave.

Defer judgment.

### DESCRIPTIVE

Judgements of the efficacy of behaviors observed are withheld

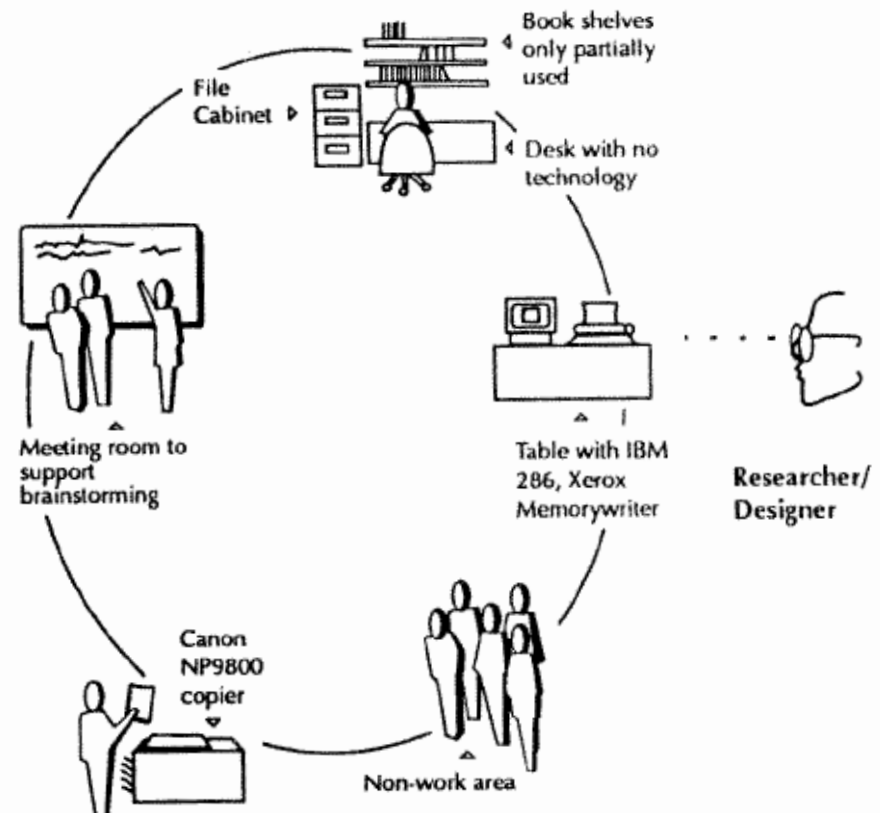

# Four Ethnographic Principles

Contrasted With \_\_\_\_\_

Member  
Point-of-View

See through  
participant eyes in  
order to grasp how  
they interpret and  
act in their world.

Descriptive categories are  
those of the researcher

# Four Ethnographic Principles

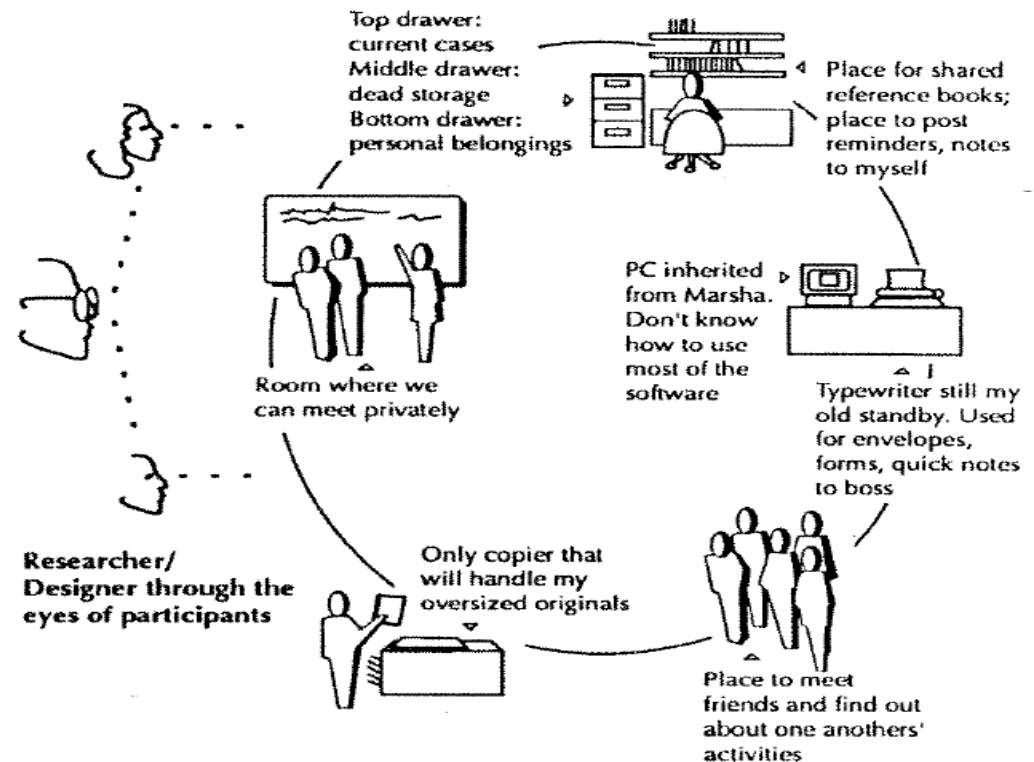

## Member Point-of-View

See through participant eyes in order to grasp how they interpret and act in their world.

### MEMBERS' POINT OF VIEW

Understand other peoples' behavior from their point of view

Descriptive categories are those of the community of practice

# Design Ethnography

Quicker than traditional ethnography

Days, weeks, or months, not years

Sometimes “concurrent ethnography”

The ethnography is being done  
at the same time that design is under way

Goal is to generate insights informing design

Sometimes “ethnographically inspired methods”

Translating from raw field observation  
to design ideas can be a difficult process

# Today

## Contextual Inquiry and Design Research

Ethnographic Principles

Contextual Inquiry Principles and Practice

Additional Design Research Methods

## Project Team Formation

# Contextual Inquiry

Applied design ethnography

“The core premise of Contextual Inquiry is very simple: go where the customer works, observe the customer as he or she works, and talk to the customer about the work. Do that, and you can’t help but gain a better understanding of your customer.”

Hugh Beyer and  
Karen Holtzblatt

# User, Subject, or Participant?

Only two groups refer to their customers as “users”

In traditional science, “subjects” are “subjected to” experiments as researcher develops understanding

In ethnographically-oriented design methods, “participants” instead “participate” in helping the researcher develop understanding

This is not simple correctness, nor only about respect, it is a mindset that matters for being open

# What is your relationship?

In a scientist/subject relationship:

The scientist does stuff

The subject responds in some way

The scientist collects data, goes back to their office, and analyzes the data to gain understanding

This is not very appropriate for gaining phenomenological understanding

# What is your relationship?

In an interviewer/interviewee relationship:

The interviewer asks a question

The interviewee responds immediately

At a pause, the interviewer asks the next question from their list

When all the questions are answered, the interview is complete

This would support gaining phenomenological understanding if you knew what questions to ask

Implying you have phenomenological understanding

# What is your relationship?

In a master/apprentice relationship:

The master is doing stuff

The master explains what they are doing

The apprentice asks clarification questions

The master answers

This relationship is at the heart of contextual inquiry

# Master/Apprentice Relationship

Seeing the work reveals structure

Many instances and interviews reveal the picture

Every current activity recalls past instances

A customer describing how she learned a feature told us, “I looked it up in the documentation.” But when we asked her to look it up again, she was able to show us: “I looked the function up in the index and scanned the section. I saw this icon in the margin that I recognized from the screen, so I read just this paragraph next to it. It told me all I needed to know.” The documentation provided the context she needed to recover a detailed story, and the detail revealed aspects that had been overlooked—that the icon was her visual cue to the relevant part of the page.

# Unique or One of Many?

“Take the attitude that nothing any person does is done for no reason; if you think it’s for no reason, you don’t yet understand the point of view from which it makes sense. Take the attitude that nothing any person does is unique to them, it always represents an important class of customers whose needs will not be met if you don’t figure out what’s going on.”

(p. 63, Contextual Design)

# Not Quite Master/Apprentice

The goal is not to learn to do the task

Instead, the goal is to learn how the participant does the task in order to learn how to support it

And for the researcher to enlist the participant's active assistance in understanding the task

# Not Quite Master/Apprentice

In a contextual inquiry relationship:

The participant is doing stuff

The participant explains what they are doing

The researcher offers an interpretation

The participant agrees or corrects

## Partners

Not really an interview

Not really an apprentice

# Principles of Contextual Inquiry

## Context

Must be done in the setting of the participant.

## Partnership

Master/apprentice model; investigator is humble.

## Interpretation

Observed facts must be regarded for their design implications. Raw facts without interpretation are not very useful.

## Focus

Themes that emerge during the inquiry.  
You cannot pay attention to all facets of someone's work at all times.

# Context

Go to the workplace & see the work as it unfolds

People summarize, but we want details

Keep it concrete when people start to abstract

“Do you have one? May I see it?”

# Context

Imagine studying how a student writes a paper

Why not just ask?

# Context

Imagine studying how a student writes a paper

Why not just ask?

May not remember details

Getting roommate to read drafts

May skip critical difficulties

Trouble locating references on the Web

# Context

## Avoid summary data by watching work unfold

We once asked a secretary how she started her day. Her answer was, “I guess I just come in and check my messages and get started.” She wasn’t able to go beyond this brief summary overview. It was the first thing in the morning and she had just arrived at the office, so we asked her to go ahead and do as she would any other morning. She unhesitatingly started her morning routine, telling us about it as she went: “First I hang up my coat, then I start my computer. Actually, even before that I’ll see if my boss has left something on my chair. If he has, that’s first priority. While the computer’s coming up, I check the answering machine for urgent messages. There aren’t any. Then I look to see if there’s a fax that has to be handled right away. Nope, none today. If there were, I’d take it right in and put it on the desk of whoever was responsible. Then I go in the back room and start coffee. Now I’ll check the counters on the copier and postage meter. I’m only doing that because today’s the first of the month. . . .”

Have them think aloud..

# Context

“One customer said he would not use a manual’s index to find the solution to a problem: ‘It’s never in the index.’ He could not say what led him to this conclusion, what he had looked up and failed to find. All his bad experiences were rolled up into one simple abstraction: it’s not there. But when we watched him looking things up, we could see that he was using terms from his work domain, but the index listed parts of the system.”

# Context

“A customer was unable to describe how she made her monthly report. When asked to create it, she pulled out her last report and started filling in the parts.”

# Context

If cannot observe,  
ground in an instance

Span time by replaying  
past events in detail

Look for holes

Ask questions to fill them

Use artifacts for context

If story has not yet ended,  
go back to a story that did

**Customer:** *When I got this problem report I gave it to Word Processing to enter online—*

(Why did she decide to give it to Word Processing? Did she do anything first?)

**Interviewer:** *So you just handed it on automatically as soon as you got it?*

**C:** *No, it was high priority, so I read it and decided to send a copy to the Claims department.*

(How did she decide it was high priority? Is it her decision?)

**I:** *How did you know it was high priority?*

**C:** *It has this green sticker on it.*

(Someone else made the decision before the report ever got here. Who and when?)

**I:** *Who put on the green sticker?*

**C:** *That's put on by the reporting agency. They make the decision about whether it's high priority and mark the report.*

(We can better pursue how the reporting agency makes the decision with them; we'll only get secondhand information from this user. Instead of trying to go further backward, look for the next missing step forward: doesn't Claims get a more personal communication than just the report?)

**I:** *Did you just send it on to Claims, or did you write them a note about why they needed to see it?*

**C:** *Oh, I always call Claims whenever I send them one of these reports.*

# Partnership

Traditionally, interviewer has too much power

You do not know what will turn out to be important

Apprenticeship model tilts power back too far

You are not there to learn the skill

Interviewer should create a partnership

Alternate between watching and probing

# Withdrawal and Return

Key in partnership

Researcher observes  
action that indicates  
something meaningful

The researcher asks  
about this, and the pair  
withdraw from the task

Discuss the question

Then return to the task

In one interview with a user of page layout software, the user was positioning text on the page, entering the text and moving it around. Then he created a box around a line of text, moved it down until the top of the box butted the bottom of the line of text, and moved another line of text up until it butted the bottom of the box. Then he deleted the box.

**Interviewer:** *Could I see that again?*

**Customer:** *What?*

**I:** *What you just did with the box.*

**C:** *Oh, I'm just using it to position this text here. The box doesn't matter.*

**I:** *But why are you using a box?*

**C:** *See, I want the white space to be exactly the same height as a line of text. So I draw the box to get the height. (He repeats the actions to illustrate, going more slowly.) Then I drag it down, and it shows where the next line of text should go.*

**I:** *Why do you want to get the spacing exact?*

**C:** *It's to make the appearance of the page more even. You want all the lines to have some regular relationship to the other things on the page.*

# Partnership

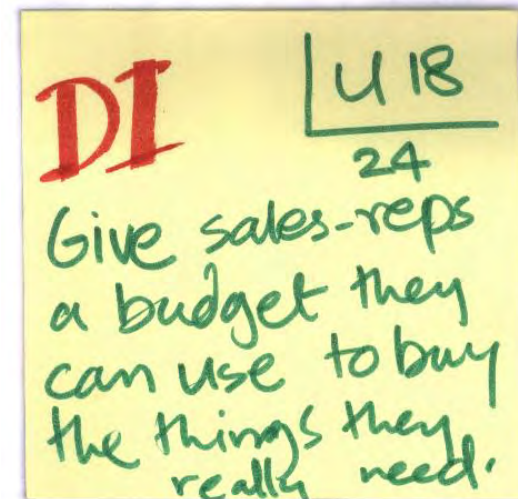

Do not squash design ideas if they arise  
This is design, not dispassionate science

Get instant feedback

If it works, you understand the  
work practice and have a solution

If it fails, you can improve  
your understanding of the work

Find the issues behind design ideas

# Partnership

Avoiding Other Relationship Models

Interviewer / Interviewee

You are not there to  
get a list of questions answered

Expert / Novice

You are not there to answer questions

Guest / Host

Move closer, ask questions, be nosy

# Interpretation

## Chain of Reasoning

Fact, Hypothesis,  
Implication for Design, Design Idea

Design is built upon interpretation of facts

Design ideas are  
end products of a chain of reasoning

So interpretation had better be right

Share interpretations with users to validate

Will not bias the data

Teaches participant to see structure in the work

# Interpretation

Instead of asking open ended questions...

“Do you have a strategy to start the day?”

“Not particularly.”

... give participants a starting point

“Do you check urgent messages first, no matter where they are from?”

“Actually, things from my boss are important, because they are for me to do. Messages or faxes may be for anybody.”

Participants fine-tune interpretations

Probe contradictions until assumptions fit

# Interpretation

Non-verbal cues can confirm or negate

Yes and Nos

“Huh?” – way off

“Umm, could be” – probably no, just being polite

“Yes, but...” or “Yes, and” – depends what follows

Commit to hearing what people actually say

Most have not ever had people actually  
pay careful attention to what they are doing

# Focus

Everybody has a focus, you cannot prevent it

Entering focus

Project focus

Because you will have a focus, be mindful of that focus and use it to your advantage

Brainstorm and define your focus

# Focus

Focus defines the point of view

Clear focus steers the conversation

Everyone in the team has an entering focus

Focus lets the interviewer see more

Focus reveals detail

Focus conceals the unexpected

Focus on one, and lose the other

Start with a focus and then expand

# Focus

Opportunities to expand focus:

Surprises, contradictions, idiosyncrasies

Nothing any person does is for no reason

Nods

Question assumptions even if they match

“Do they really do that? Why would they do that?”

What you do not know

Treat interview as an opportunity to learn new stuff

Even if the participant is not knowledgeable, extent of their knowledge / misinformation can be useful

# The Stages of a Contextual Inquiry

# Explain the Rules

Be sure you explain “the rules” of how you’ll be interacting during the contextual inquiry

If this isn’t completely clear, the encounter may devolve into a traditional interview (since this relationship is more familiar to people)

# How to Screw it Up

## Slipping into abstraction

Keep it concrete, in the work, in the details

## Not being inquisitive or nosy enough

If you have the impulse to ask, do it right away

## Being too pushy with interpretation

If you ignore corrections, participant will shut down

# How to Screw it Up

## With the wrong person

They need to be willing to partner with you

## Turning it into a regular interview

If you could have done it in a coffee shop,  
then you did not do a contextual inquiry

## Multiple people present

Can be good if they talk, surface their thoughts  
Bad if they do not talk, are not forthright

# How to Screw it Up

## Overly disrupting the task

If you change the task, your data is less useful

Withdrawal and return, maybe on a schedule

Retrospective methods might be necessary

(e.g., going through artifacts, prior critical incident)

## Being stuck in your focus

Important to have a focus,

expectations of what you expect to be important

But you learn by attending to misconceptions

# When All Else Fails

Remember Master/Apprentice

Remember Context

Remember Withdraw & Return

# Affinity Diagrams

Generated during  
group session

Each observation,  
idea, note to a post-it

Notes are hierarchically  
organized into themes,  
based on project focus

# Today

## Administrative

Project Status

Denny 303 on Tuesday 10/10

## Contextual Inquiry and Design Research

Ethnographic Principles

Contextual Inquiry Principles and Practice

Additional Design Research Methods

## Project Team Formation

# Many Design Research Methods

Many other design research methods are available, with different strengths

Often apply multiple methods for complementary perspectives

Fundamental goal remains to gain design insight through improved understanding of problems

# Interviews

Method 48

Similar to contextual inquiry,  
but lacking context of direct observation

Set a focus, record, take notes, have two people

Can be Structured / Semi-Structured

Avoid leading questions

Interpret responses

Repeat and rephrase, probe terms and concepts

“can you give an example”, “tell me more”,

“what do you mean”, “why was that important”

Ask when it did not happen as expected

Pair with questionnaires for depth / to humanize

# Focus Groups

Method 43

Moderated conversation among peers

Moderator helps establish this,  
participants share experiences, wants/needs

Researcher benefits from their conversations

Prompts discussion topics

Explanations of problems in status quo

Underlying emotions in a process

Desires / disagreements for new designs

# Diary Study

Method 30

Participants keep a diary

Possibly as primary data

Possibly to create mindfulness before interview

Need						
Mon	Tue	Wed	Thu	Fri	Sat	Sun
12am-3am	3am-6am	6am-12pm	12pm-3pm	3pm-6pm	6pm-12am	
You needed: <input checked="" type="checkbox"/> Info. <input checked="" type="checkbox"/> Assist. <input type="checkbox"/> Other						
What did you need? <i>to know if stroller could be used on Dev Valley trail</i>						
Why did you need it? <i>wanted to take baby for walk in park but it must be ice-free</i>						
Where were you? <i>at home</i>						
What were you doing? <i>planning activity</i>						
When did you need it? <i>5-10 mins</i>						
What I needed was very important.						
<input type="checkbox"/> Strongly Disagree	<input type="checkbox"/> Disagree	<input type="checkbox"/> Neutral	<input checked="" type="checkbox"/> Agree	<input type="checkbox"/> Strongly Agree		

# Diary Study

Method 30

Participants keep a diary

Possibly as primary data

Possibly to create mindfulness before interview

# Diary Study

Method 30

Participants keep a diary

Possibly as primary data

Possibly to create mindfulness before interview

# Experience Sampling

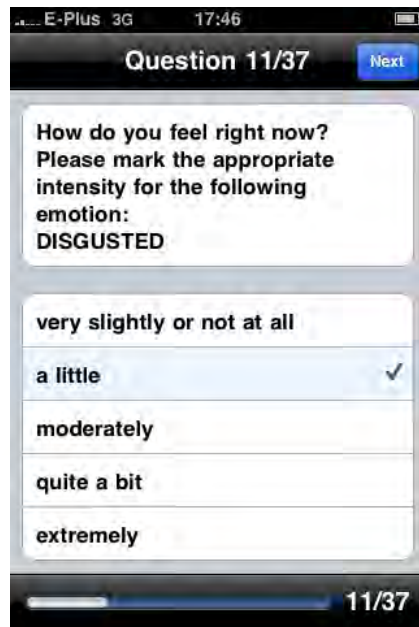

Method 37

Emerges from “beeper study” method

Can be random, can be context-aware

Can gather self-report, photos, sensor data

# Many Design Research Methods

## Personal Inventories

“collections of artifacts selected by the participant”

Method 62

## Cultural Probes

“materials designed to inspire people to thoughtfully consider personal context and circumstance”

Method 24

“maps ... asked the elderly to mark zones for meeting others, being alone, dreaming...”

# Many Design Research Methods

## Behavior Mapping

Method 06

“place-centered mapping”

“individual-centered mapping / traces”

## Graffiti Wall

Method 45

“candid feedback on behaviors and perceptions of current spaces”

# Shadowing

Method 76

“observational method that involves tracking somebody in their role”

“not intended to be covert ... however subtle instances might be completed in public spaces ...”

Useful reminder to be thoughtful and safe

multiple groups have been asked to leave  
be safe, be mindful of people

# Value Sensitive Design

To be useful or usable is not the same as supporting important human values

Examples?

# Value Sensitive Design

To be useful or usable is not the same as supporting important human values

Examples?

Independence

Privacy

Trust

Accountability

Ownership and Property

Fairness

Freedom from Bias

Human Safety

Universal Access

Sustainability

# Value Suitabilities

Value Sensitive Design is an interactional theory

Values are not inherent in a given technology

But a technology is not value neutral

Some technologies are more suitable than others for supporting given values

Value Sensitive Design investigates stakeholders, values, and value suitabilities

Direct and indirect stakeholders

# Tripartite Method

## Conceptual Investigations

Analyses of the values involved in a system

## Technical Investigations

Identify or develop technical mechanisms

Investigate suitability to support values

## Empirical Investigations

Investigate who the stakeholders are,  
which values are important to them,  
and how they prioritize these values

# Functional Fixedness

# Functional Fixedness

# \$5 Challenge

Teams of students “funded” with \$5

Allowed several days to plan

After they open the envelope, allowed two hours

Make as much money as possible

# \$5 Challenge

Teams of students “funded” with \$5

Allowed several days to plan

After they open the envelope, allowed two hours

Make as much money as possible

Lottery tickets, car washes

# \$5 Challenge

Teams of students “funded” with \$5

Allowed several days to plan

After they open the envelope, allowed two hours

Make as much money as possible

Lottery tickets, car washes

Line waiting service, bicycle tire pressure check

Evolved with experience (e.g., pagers, donations)

# \$5 Challenge

Teams of students “funded” with \$5

Allowed several days to plan

After they open the envelope, allowed two hours

Make as much money as possible

Lottery tickets, car washes

Line waiting service, bicycle tire pressure check

Evolved with experience (e.g., pagers, donations)

Winner made \$650...

# Why Critique?

Critique helps evaluate early, often, and cheaply

Applicable to artifacts of many types

Compare to other expert inspection methods

You are not your own worst critic

We collectively know more than any one of us

It is hard to see past your own decisions

Design requires getting past our own infatuation

A design can feel like  
our love, our baby...

# Learning to Give and Receive Critique

You will learn to both give and receive critique

- Each is important

- Each is a skill developed through practice

Many activities will consist of group critiques

- Each group will present an artifact

- Other class members and staff will offer critique

Starting today with critique of  
Assignment 2b: Design Research Plan

# Why Critique?

Critique is not just for design

It applies to many artifacts and domains

Examples?

# Why Critique?

Critique is not just for design

It applies to many artifacts and domains

Examples?

visual art, writing, design, code (i.e., code review)

Over time, you should gather people who can give you high-quality critique in everything you do

You may meet some of those people in this class

We do not insist on  
deploying flawed code...

# Critique is About Improvement

# What is Critique?

Critique is a method for feedback

It is not just a list of complaints

1. Presenters sit down with critics
2. Quickly explain their artifacts  
(e.g., less than 2 minutes)
3. Critics give feedback, ask questions
4. Presenters respond,  
take notes on what is discussed

# Critique is Neither Criticism nor Design

Seriously, not just a list of complaints

Critics offer honest feedback

Both positive and negative

Presenters should be able to learn

*what works well* and

*what is problematic* about their artifact

It is then presenter's responsibility to sort through feedback, decide what is important, how to act

You must take notes for later review

# Tips for Presenters

Critique can be hard, especially at first

Try to avoid being defensive

You are not your work, separate yourself

Remember the expertise you bring

Even if “the room” knows more about design, you know more about your problem / artifact and your rationale for the current design

# Tips for Presenters

Taking advice is not giving up authorship

You still make the final decisions

A half-baked suggestion does not contain all the details of a finished solution

Design your critique

What you show invites different forms of feedback

Verbally indicate what kind of feedback you want, but also provide an artifact of appropriate form

This course will guide you in a variety of forms

# Tips for Presenters

Design your critique:

## 1) establish clear roles

Presenter: presenting, not convincing

Audience: understand problem and context,  
ask lots of questions

Facilitator: watch schedule, stay on agenda,  
take notes to help presenter,  
ask key steps for moving forward

# Tips for Presenters

Design your critique:

2) ensure agreement on the problem

State the problem and context for feedback

I am showing [early/mid/late] work

Around [the problem]

Because [why it's a problem]

And am looking for feedback around [specific focus for feedback]

State what is not the current focus

Ensure understanding and check for clarity

# Tips for Presenters

Design your critique:

3) focus on feedback, not criticism

## Criticism

passes judgement

finds fault

is personal

is vague

tears down

is ego-centric

is adversarial

belittles the designer

## Critique

poses questions

uncovers opportunity

is objective

is concrete

builds up

is altruistic

is cooperative

improves the design

# Tips for Presenters

Design your critique:

4) keep laptops and phones put away

Exception for the presenter,  
but prefer paper whenever possible

Exception for the facilitator / note taker

# Tips for Presenters

## Keep an eye out for design rationale

You probably made some decisions without thinking through good reasons at the time

Critique can help give a rationalization for past decisions as you explain the artifact to others

## Exploit failure

A “failed” artifact should teach you about the design space, what won’t work, and why

The goal is to improve, this requires failure

# Tips for Critics

There are many strategies for giving critique

Hamburger method

I like, I wish, what if

Socratic method

These provide ways to give critique that can help the conversation go smoothly

Can give you a question to ask when you do not have one, provide a way to ask that is productive and less likely to create defensive reaction

# Tips for Critics: Hamburger Method

“Bun, meat, bun”

**Bun:**

Something fluffy and nice

**Meat:**

How to improve

**Bun:**

Something fluffy and nice

Not a “shit sandwich”

Positives need to be genuine, enable learning from both positive and negative aspects of the artifact

# Tips for Critics: I Like, I Wish, What If

## I Like:

Lead with something nice

## I Wish:

Often leading from what you like

## What If:

An idea to spark further conversation, better than:  
“I think you should have...” or “Why didn’t you ...”

Gives the presenter benefit of the doubt if they did  
already think of your idea, can present rationale

# Tips for Critics: Socratic Method

Identify an aspect of the design and ask “Why?”

Can be good if unsure what else to say

Forces presenter to give, or develop, explanations for design decisions, which can help build up the design rationale

Not fundamentally negative, hard to get defensive

# Tips for Critics

Limit your use of personal pronouns (e.g., “you”)

Critique is about the artifact, not the designer

A designer deserves honest feedback

Both positive and negative

Including clarity and rationale

Help with actionable suggestions

But it is not your design

Perhaps several possible ways of thinking

# Summary

Fall out of love with the things you build

Let others help you see past the infatuation

Get feedback early, often, and cheaply

Focus on improvement

In brainstorming, we were not *criticizing*

In critique, we are not *defending*

You will learn to both give and receive critique

If you are having difficulty, please come talk to us

# Design Research Plan Critique

With your group, find another group

Decide which group will present first

Swap half the audience group to another table

Present your Design Research Plan

Decide who is taking notes

Remind project context

Present proposed methods

Present details via design research artifact

# Design Research Plan Critique

Some things to look for:

Are questions open enough,  
avoiding the presumption of a particular design?

Are questions specific enough,  
offering a potential to gain new insights?

Are there other participants to consider?

Are there other methods to consider?

Is the proposal feasible for 1 to 2 weeks?

# Considering an Effective Critique

Is there a set agenda for work being shown?

Are there clearly defined roles in each session?

Has the facilitator kept conversation focused?

Have presenters accurately shared the scope of their problem?

Did everyone in the room understand the problem framework, enough where each person felt equipped to ask questions?

Was feedback provided in the form of questions or criticism?

Did the critique feel like a cooperated effort to improve a design, problem outline, or individual process?

# Resources

## Guidelines for design research interviews

Structured in a format to use for critique of the interview process itself

Welcome		
#	Concept	Description
W1	Set appropriate expectations	Review context of interview, purpose of interview, roles of moderator, note taker and participant, estimated duration, moderator is not the designer
W2	Reassure participant	Not to host of the participant, here to learn about the strengths/weaknesses of design. Participant should not speak for others unless specifically asked

Questioning		
#	Concept	Example
Q1	Avoid leading questions	Bad: How did you like the login screen? Good: What did you think about the login screen?
Q2	Where possible, ask open-ended questions instead of binary or limited choices	Bad: Does this make sense? Good: What are your impressions of this?
Q3	Ask opinion questions using balanced emphasis on different options	Bad: Is the feature helpful to you? Good: Is the feature helpful to you or is the feature not helpful to you? Why?
Q4	Ask about actual behavior for the individual, avoid hypothetical predictions for larger groups	Bad: Would this be a good idea? Good: How valuable would this be to you in your job?
Q5	Don't assign blame in probing questions	Bad: Why did you do that? Good: I noticed you did X. Talk me through your thought process.
Q6	Ask for specific examples and encourage storytelling	Bad: Do you have trouble with the search function? Good: Tell me about a time when you couldn't find what you were searching for.
Q7	Avoid overly complex questions that require lengthy descriptions	Bad: When this site was designed, there was discussion whether... Good: How could this site best meet your needs?
Q8	Don't ask participant to design solutions, ask for opinions on experience	Bad: What would be the best way to design this? Good: In your experience what other applications have done this well?
Q9	Ask curious questions to explore, but avoid argumentative probes	Bad: Do you have anything else to say about...? Good: Can you tell me more about...?
Q10	Ask "Why" to understand reasons for certain actions.	Bad: How would you rate your experience with the site? Good: How would you rate your experience with the site? Why?

Interacting		
#	Concept	Description
I1	Let the participant talk	Pause to let them finish a thought - don't talk over them.
I2	React to body language	Pick up on participant body language of frustration or annoyance and adjust interaction accordingly.
I3	Don't defend a design	Act as a neutral party outside of the design team - moderator is there for research, not to defend designs.
I4	Watch for self-censoring	Probe further when participant censors themselves by trying to be too nice, or blaming themselves.
I5	Develop friendly rapport	Be welcoming and helpful to participant without being too empathetic if participant is negative toward a design.
I6	Provide neutral encouragement	Offer fair assessment of participant's responses - don't overly praise positive or negative comments.
I7	Repeat answers	State responses back to participant to ensure accuracy on complex points and to encourage elaboration.
I8	Minimize moderator distractions	Be aware of annoying or repetitive gestures and phrases from the moderator and minimize them.
I9	Encourage think-aloud	For task-based questions, remind participant to think-aloud.
I10	Don't force opinions	Ask about participant opinions where appropriate, but don't force opinion if participant doesn't feel strongly

Closing		
#	Concept	Example
C1	Ask for overall assessment of subject	"Can you summarize your experience with X today?" or "From your perspective, what is the most important thing to consider in the design of X?"
C2	Request comments regarding topics not raised by moderator	"What comments do you have on topics we didn't cover today?" or "What else should I have asked?"

## Design at Large: real-world, large scale, and sometimes disruptive

Scott Klemmer (UCSD)

Host: Froehlich

Paul G. Allen School Distinguished Lecture

Thursday, October 12, 2017, 3:30 pm

EEB-105

[Maps and directions](#)

## Abstract

In recent years, my group--and probably many of you--have experienced a dramatically-increased ability to do Design at Large: creating research that is widely-used by real people and learning a ton from the experience. When moving from designing artifacts in the lab to designing experiences at large we inevitably shift to studying complex sociotechnical systems. A lot of the behavior is emergent, and sometimes completely unexpected. The successes in this new world are tremendously exciting, but like all creative endeavors, there are lots of flops. One source of failure is that designers often receive guidance that's based on faith rather than insight. This leads to designs that 'solve' nonexistent problems, miss important needs, hold onto misguided assumptions for too long, or waste time relearning known insights. To help sketch where a shift to Design at Large may take us, I'll share insights from our research systems and their real-world usage, experiences with online learning, former students' adventures, and what we're up to in the Design Lab.

## Bio

Scott is a Professor of Cognitive Science and Computer Science & Engineering at UC San Diego, where he co-founded the Design Lab. He previously served as Associate Professor of Computer Science at Stanford, where he co-directed the HCI Group, held the Bredt Faculty Scholar chair, and was a founding participant in the d.school. He has a PhD in CS from Berkeley and a dual BA in Art-Semiotics and Computer Science from Brown (with work at RISD). His former graduate students include leading professors, researchers, & founders. He leads the Interaction Design Specialization on Coursera; it introduced peer assessment to online education. He has been awarded the Katayanagi Emerging Leadership Prize, Sloan Fellowship, NSF CAREER award, Microsoft Research New Faculty Fellowship, and Nine best-paper or honorable mention awards. He is program co-chair of Learning@Scale '18, on the editorial board of HCI and TOCHI; was program co-chair for UIST, the CHI systems area, and HCIC. He advises university design programs globally. Organizations worldwide use his group's open-source design tools and curricula.

# Design Research Reminders

You are not doing science

You seek design insight,  
not knowledge, truth, or generality

Do the best design work you can

May find that self-tracking is not the opportunity

We designed the project sequence, but be flexible

Capture and keep your raw work products

Dedicate a note keeper, consider recording

Our collection is minimal, but you will want them

# Structure of Section and Critique

Focus on peer feedback and learning

Bring your artifacts, be ready to present them

Bring paper, keep the laptops put away

Critique progression

Reminder of your project

What you have done

What you have learned

Your plan going forward

Feedback from peers / staff

Questions you have for peers / staff

# Structure of Section and Critique

With 3 Project Groups:

- 2 groups in peer critique

- 1 group with course staff

Rotate at about 12 minutes

With 4 Project Groups:

- 2 groups in peer critique

- 2 groups each with member of course staff

Rotate at about 17 minutes

Time at end to huddle, follow up with anybody

# Developing Insight Is Hard

Design research yields a lot of data

Does not reduce to a statistical test

Need to get from data to design insight

But this is fundamentally difficult

Data  
????  
Insight

Although project sequence separates research from design ideas, you will be exploring ideas as you do the research

# Objectives

Be able to:

Describe how taking different perspectives on design research data can help to surface design insights.

Given design research data, be able to analyze that data in terms of people and their tasks.

Describe personas, their purpose, how and why we emphasize design research data in their creation.

Define and describe relationships between tasks, personas, and scenarios.

# Affinity Diagrams

Generated during  
group session

Each observation,  
idea, note to a post-it

Notes are hierarchically  
organized into themes,  
based on project focus

# Affinity Diagrams

# Affinity Diagrams

# Developing Models

Distilling models that summarize data

Highlights gaps in understanding

Identify breakdowns and workarounds

Many types of models

e.g., Flow, Sequence, Artifact, Cultural, Physical

None is perfect, they highlight different things

No model is perfect or guarantees insight

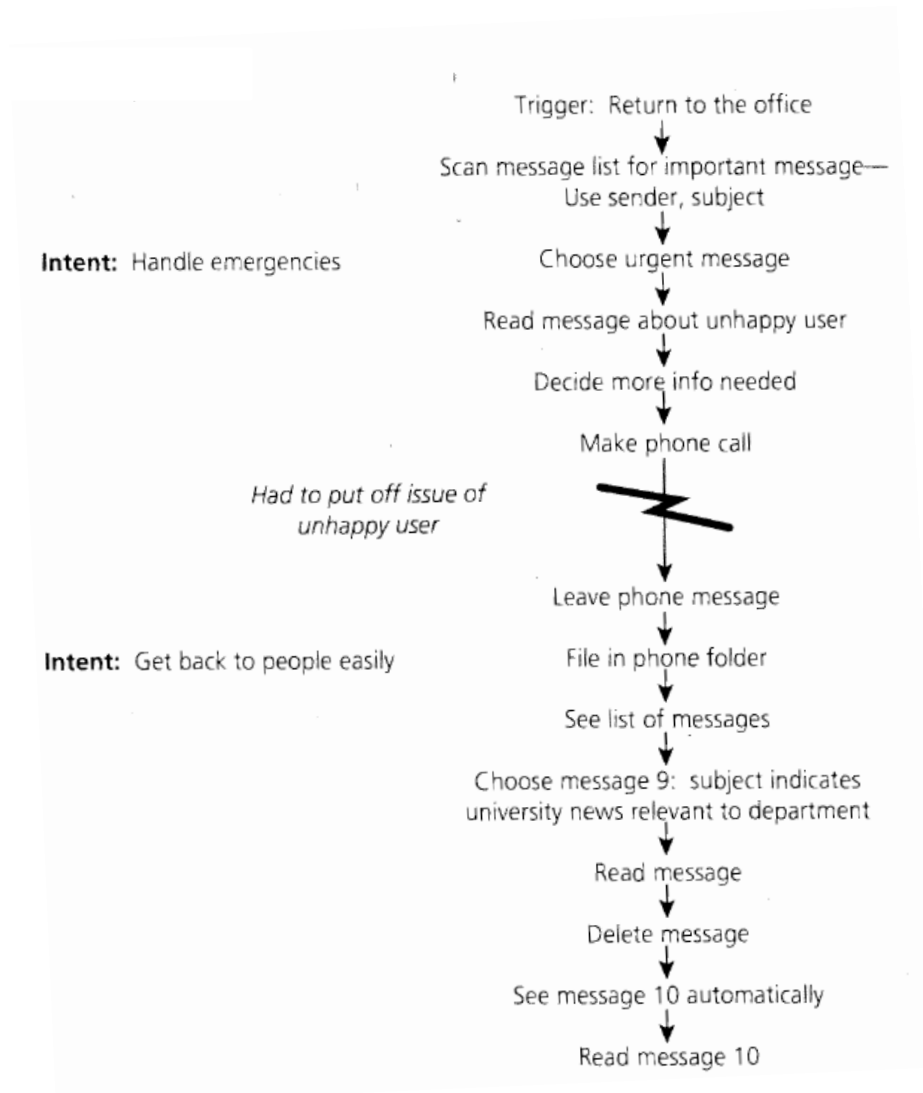

# Flow Model: Secretarial Hub

# Flow Model: Creative Work

# Sequence Model: Doing Email

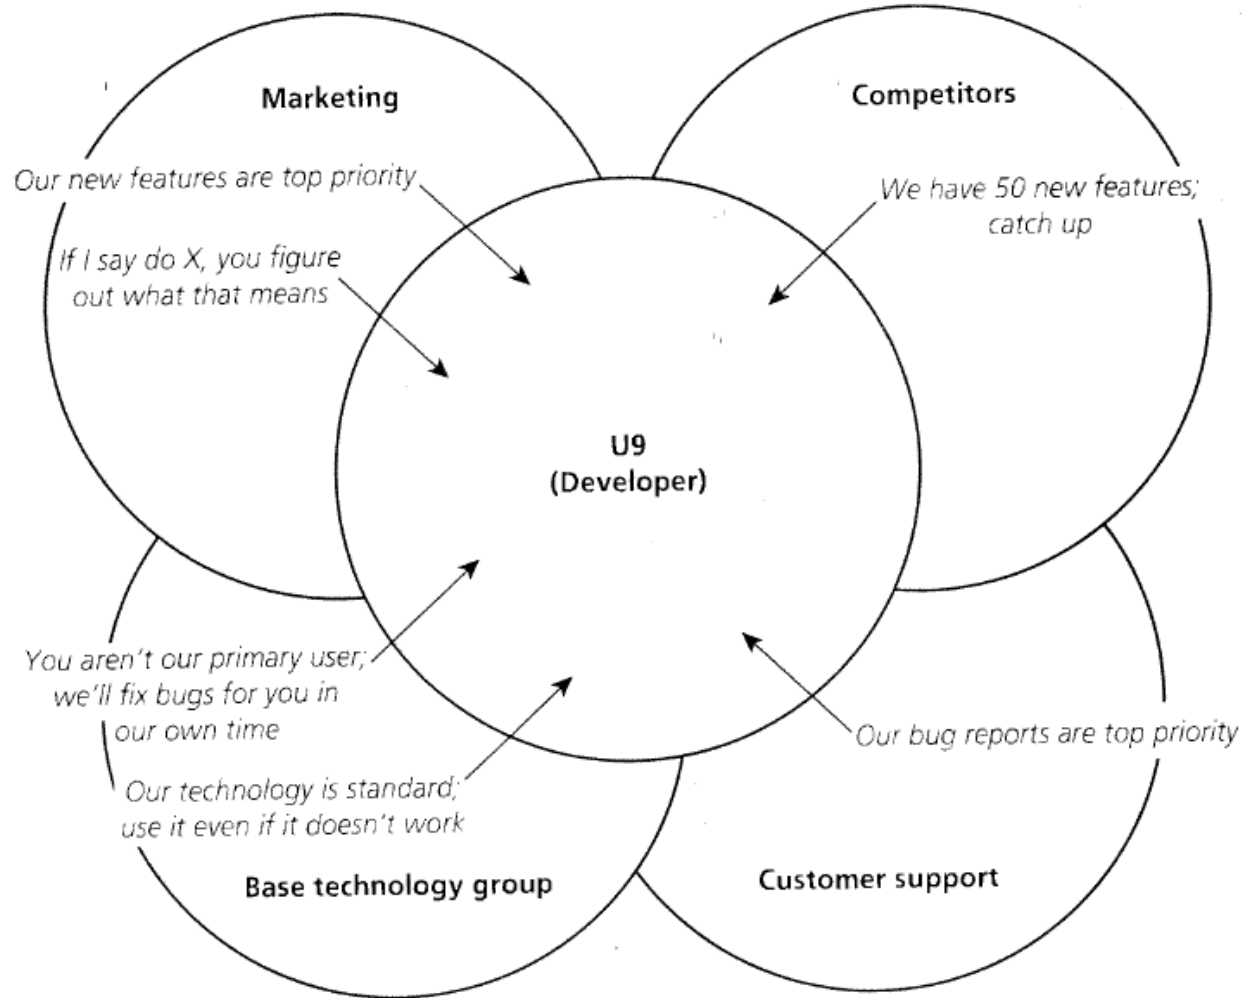

# Sequence Model: Equipment Audit

# Cultural Model: Developer

# Cultural Model: Department Store

# Artifact Model: Calendar

# Physical Model: Work Site

Approximately a 5 minute walk. If doing an audit at a site under construction, then safe path frequently changes and may need to wait for construction equipment to pass.

# Designing with Tasks

We will primarily emphasize designing with tasks

# Tasks Matter

System will fail if:

- It is inappropriate for the person

- It does not meet a person's needs

Your contextual inquiries will emphasize getting to know people and their needs

Can you then just make 'good' interfaces?

# Why Task Analysis?

‘Good’ has to be interpreted in the context of use

Might be acceptable in office, but not for play

Infinite variety of tasks and customers

Guidelines are too vague to be generative

e.g., “give adequate feedback”

Can be used to critique, but not to generate

Design is often about tradeoffs

Example of gestures  
to navigate display

# Why Task Analysis?

Task analysis is a lens on the information you obtain through design research methods

Use what you learned in your research to answer the questions in the task analysis

Project sequence orders the two, but in practice you should iteratively decide how to best draw upon all relevant methods throughout a process

# 11 Task Analysis Questions

Who is going to use the system?

What tasks do they now perform?

What tasks are desired?

How are the tasks learned?

Where are the tasks performed?

What is the relationship between people & data?

What other tools do people have?

How do people communicate with each other?

How often are the tasks performed?

What are the time constraints on the tasks?

What happens when things go wrong?

# Question 1

Who is going to use the system?

## Identity

In-house or specific customer is more defined

Broad products need several typical consumers

## Background

Existing systems, training

## Skills

Work habits and preferences

Physical characteristics and abilities

# Seattle Parking Meter

Who is going to use the system?

Identity?

People who park in Seattle

Business people, students, elderly, tourists

Background?

Have used parking meters before

May have an ATM or credit card

Have used other fare machines before

# Seattle Parking Meter

Who is going to use the system?

Skills?

May know how to put cards into ATM

Work habits and preferences?

Park several times a week, a month, a year

Physical characteristics and abilities?

Varying heights, do not make it too high or too low

Anything else?

Qdoba soda machine

## PARK, PAY & DISPLAY

### Parking Pay Station Instructions

Insert card and push **BLUE** button to buy time **OR** Insert coins to buy time

Push **GREEN** button to print receipt

Remove card quickly wait for receipt and display properly

Display one receipt only to park in any meter or pay station space until your time expires

Use the removable backing to tape receipt to **INSIDE** of a front-seat side window

Questions? Call 684-ROAD (7623)  
paystations@seattle.gov

## 泊車、付款並顯示

### 泊車付費站使用說明

插入卡並按 **藍色** 按鈕購買時間，或投入硬幣購買時間

按綠色按鈕打印收據

迅速將卡取出等候收據並適當顯示

僅限顯示一張收據，以便在任何咪表或付費站的車位泊車，直到您的時間到期

請使用可剝離的背面，將收據貼在前座側車窗內側

有問題嗎？請致電 684-ROAD (7623)  
paystations@seattle.gov

## ĐẬU XE, TRẢ TIỀN & DÁN BIÊN NHẬN

### Hướng Dẫn về Trạm Trả Tiền Đậu Xe

Đút thẻ vào và bấm nút **XANH** để mua giờ **HOẶC** Bỏ tiền các để mua giờ

Bấm nút **XANH** để in biên nhận

Rút nhanh thẻ ra chờ biên nhận và dán đúng cách

Chỉ dán một biên nhận để đậu xe tại bất cứ chỗ nào có đồng hồ hoặc trạm trả tiền cho đến khi hết giờ đậu

Dùng miếng dán mặt sau có thể gỡ ra để dán biên nhận vào **MẶT TRONG** của kính bên trước

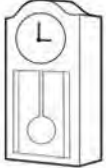

Thắc Mắc? Hãy gọi số 684-ROAD (7623)  
paystations@seattle.gov

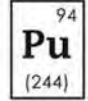

# BILLY

There are limits, a tradeoff in this design

# Question 2 and Question 3

What tasks do they now perform?

What tasks are desired?

Important for both automation and new functionality

Relative importance of tasks?

Observe people, see it from their perspective

## Automated Billing Example

small dentists office had billing automated

assistants were unhappy with new system

old forms contained hand-written margin notes

e.g., patient's insurance takes longer than most

*Yorkshire Pudding*  
*Individual*

MEALS TESTED TASTED AND APPROVED

**POPOVERS**

*beat well*  
*very*  
↓

*3 egg recipe*  
*makes*  
*12*

- 2 cupfuls flour
- 2 eggs
- 1/2 teaspoonful salt
- 2 cupfuls milk
- 2 teaspoonfuls melted fat

Beat eggs slightly. Sift flour and salt, and add alternately with milk to eggs. Add melted fat. Beat with egg beater until smooth and full of bubbles. Fill hot greased cast aluminum or iron gem-pans or glass or earthenware custard cups, 2/3 full of popover batter. Place immediately in a hot oven of 450° F. and bake for 30 min. Then lower temperature to 350° F. and bake for 15 min. longer. Makes 9 popovers.

**CORNBREAD**

- 2 cupfuls cornmeal
- 2 cupfuls sour milk
- 1 teaspoonful soda
- 2 eggs, beaten
- 1 1/2 teaspoonfuls salt
- 2 tablespoonfuls melted fat
- 3 tablespoonfuls sugar

Sift dry ingredients together. Mix milk with beaten eggs and add to dry ingredients. Stir well together and add melted fat. Pour into a hot greased baking pan or muffin tins and bake in hot oven of 400° F. for 20-25 min. Makes 24 pieces.

**CRIDDLE CAKES**

PROVED

poonful salt  
beaten  
1 milk

beaten egg and add  
melted fat. Bake in  
25 min. Makes 11

cup. flour, add 4  
baking powder to  
g and bake same as

sp. baking powder,  
same as for Plain  
and adding to other  
14.

to 1 cup. chopped  
fruit with 2 tbsp.  
lates, figs, apples,

# Question 4

How are the tasks learned?

What does a person need to know?

Do they need training?

academic

general knowledge / skills

special instruction / training

# Question 5

Where are the tasks performed?

Office, laboratory, point of sale?

Effects of environment on customers?

Are people under stress?

Confidentiality required?

Do they have wet, dirty, or slippery hands?

Soft drinks?

Lighting?

Noise?

# Question 6

What is the relationship between people & data?

## Personal data

Always accessed at same machine?

Do people move between machines?

## Common data

Used concurrently?

Passed sequentially between customers?

Remote access required?

Access to data restricted?

Does this relationship change over time?

Patient-provider curation example, Fitbit example

# Question 7

What other tools does a person have?

More than just compatibility

How customer works with collection of tools

Automating lab data collection example:

how is data collected now?

by what instruments and manual procedures?

how is the information analyzed?

are the results transcribed for records or publication?

what media/forms are used and how are they handled?

Enhanced Field Biologist Notebooks, Navigating by Sextant

# Question 8

How do people communicate with each other?

Who communicates with whom?

About what?

Follow lines of the organization? Against it?

Old Email Adoption Example, Contrasted to Current Expectations

# Question 9

How often are the tasks performed?

Frequent use likely remember more details

Infrequent use may need more help

Even for simple operations

Make these tasks possible to accomplish

Which function is performed

Most frequently?

By which people?

Optimizing for these will improve perception of performance

Careful about initial use scenario

# Question 10

What are the time constraints on the tasks?

What functions will people be in a hurry for?

Which can wait?

Is there a timing relationship between tasks?

Target example, versus Pregnancy in Web Search

# Question 11

What happens when things go wrong?

How do people deal with

task-related errors?

practical difficulties?

catastrophes?

Is there a backup strategy?

What are the consequences?

# Plantr Task Analysis

Example abbreviated task analysis

Be sure to see other examples on website

As with models, no question promises insight

# Plantr Task Analysis

## 1. Who is going to use the system?

Anyone who owns indoor plants is a potential user of Plantr. All of the plant owners that we interviewed forgot to water their plants at some point regardless of age, experience, and background. Even Lucy, who spent most of her time at home because she worked from home, struggled with timely watering.

# Plant Task Analysis

## 2. What are the currently possible tasks?

When people purchase a plant, they often look up information about the proper lighting and temperature conditions for their plants. Additionally, people must find out how much and how frequently to water and fertilize their plants.

# Plantr Task Analysis

## 3. What are currently unavailable, desired tasks?

People want a way to remember to water and care for their plants. Forgetting to water plants was the most cited reason for plant death, and the only task that participants in our inquiries mentioned completing on a regular basis.

# Plant Task Analysis

## 4. How are tasks learned?

Most people learned how to take care of their plants through trial and error. Some consulted the Internet, nursery staff, or friends for more information on plant care.

# Plant Task Analysis

## 5. Where are the tasks performed?

Tasks like watering and fertilizing are performed at the plant's location. People keep plants in their workplace, like Jack, or at home, like Lucy and Caroline. Getting information about plant care was performed in a variety of places. People who consult the Internet could be anywhere with a platform that supports web browsing. Those who go to the nursery to talk to plant experts are required to go to a specific location to talk to someone in person.

# Plant Task Analysis

## 6. What is the relationship between a person and data?

We identified three different types of data: a plant's current state, information about plants, and data that reflects the person's plant care history.

A plant's current state is data on the moisture level of its soil and the general appearance of the plant (e.g., color, stiffness/limpness of leaves). People use this information to determine the plant's needs. Caroline and Lucy watered their plants when the soil felt dry or the leaves began to droop.

# Plant Task Analysis

## 6. What is the relationship between a person and data?

People consulted various plant care information databases when they wanted to know how to care for their plants.

People used their personal history of plant care to determine how to take care of plants. Caroline said that she used to underwater plants, but she learned from her mistake and now tries to water them more often. People also base their buying decisions based upon their plant care history. Caroline noted that she tries to buy plants that require minimal water.

# Plantr Task Analysis

## 7. What other tools do people have?

Caroline, Lucy, Jack, and Kacy all have phones and computers. People also have a water source, pots, and soil for their plants. Most people probably have access to a nursery or library.

# Plant Task Analysis

8. How do people communicate with each other?

Plant owners communicate on online forums and message boards. People who happen to be in the nursery at the same time might talk to each other about plant care. Likewise, people who have friends with indoor plants may share plant care tips.

# Plantr Task Analysis

## 9. How often are the tasks performed?

Watering is performed with a frequency between twice a week (Jack) and twice a month (Caroline). Fertilizing is performed less frequently, between once every two weeks to once every three months. Plants do not become sick often enough to make a good estimate about how often people try to get help.

# Plant Task Analysis

## 10. What are time constraints on the tasks?

Plants must be watered with some regularity, so if people do not water their plants for long enough, the plants will start to die. Likewise, if plants are in need of attention for other reasons - pH imbalance, environment too dry - and they do not receive attention within some amount of time, they will die. Watering, caring, and learning how to care for a plant takes time. People who are very busy might not have the time or attention required for plant care.

# Plant Task Analysis

## 11. What happens when things go wrong?

When plants become "sick", people take action, seek help, or ignore the problem until the plant dies. When people forget to water plants, they usually notice that the plant needs water and give it water. Sometimes people may not realize that a plant needs water until it is too late.

# Combine with Other Methods

Personas

Concept Mapping

Competitive Analysis

“If you want to create a product that satisfies a broad audience ..., logic will tell you to make it as broad in its functionality as possible to accommodate the most people. Logic is Wrong.”

Method 63

# Personas

Archetypal character meant to represent a group of people in a role who share common goals, attitudes, and behaviors when interacting with a particular product or service

*"This is what I need in order to do my job."*

**NAME:** Vivica Parker

**AGE:** 32

**OCCUPATION:** Journalist

**PROFILE:**

Born in Washington, DC

Lives and works in New York City  
(far from family)

Lives by herself in a small apartment

Has a driver's license

Calls parents and older brother on weekends

Works for an online art magazine and is currently in charge of writing a blog about graffiti. In order to do that she needs to do the following tasks:

- Walk/drive around the city
- Take pictures
- Talk with artists and keep record of that info (place, time, people)
- Work day/night
- Share the collected information with editor and magazine's readers

To do her job, usually carries notebooks, camera and cell phone to keep in touch with her editor.

**INTERESTS:**

Amateur theater actress since she was 23

Travel and merge in different cultures

Architecture

**ACTIVITIES:**

Did research on ancient Egyptian architecture

Member of the Art Society of NY

**TECH EXPERIENCE:**

Basic knowledge about operating systems

Uses the Internet frequently either for personal or business purposes

**TECH ATTITUDE:**

Always open to new technology, but she feels annoyed with complex applications and discards them very often

Tends to feel numb using the latest high-tech gadgets and needs time to get used to them

**GOALS & SITUATED BLOGGING NEED:**

Needs to keep track of her location and time when she (a) finds and photographs graffiti and street art for her blog and (b) conducts audio interviews of artists and enthusiasts

Needs to have a quick way of keeping track of content gathered from separate locations in order to post articles before editorial deadlines

# Personas

## Purpose

Empathy: characters to engage and relate to

Focus: can focus on specific people and needs, versus always attempting to design for everybody

Communication: conveys range of data, can help make assumptions more explicit

## Multiple Types

Primary, Secondary, Supplemental,  
Customer, Served, Negative

# Personas

## Goals

Life Goals: personal aspirations

e.g., to retire before the age of 50

Experience Goals: how to feel with a product

e.g., to be competent while using the product

End Goals: tangible outcomes with a design

e.g., to be updated about finances over last month

# Personas

## Roles

Personas do not necessarily equal roles

e.g., parent, doctor, programmer, actor

People can have multiple roles

People in a role can have different needs and goals

e.g., new programmer vs. experienced programmer

e.g., parent of 1 vs. parent of 8

e.g., oncologist vs. podiatrist

# Personas

Critical to avoid using stereotypes as personas

“The whole point in creating personas is to get past our personal opinions and presuppositions.”

Goodwin, 2002

Not a substitute for design research, but a tool for summarizing and conveying that research

Collect design research data

Segment people

Create personas for segments

# Personas

## Parxat Practical

### Primary Motivation to acquire phone:

I got my mobile phone to make calls when I am away from work or home

### Associated motivations:

I got a good price on my phone and mobile phones are cheaper than landlines

## Personal Profile

*"Mobile phones are part of your communications its like eyes and ears"*

For Parxat, mobile phones have provided a key way to stay in contact with work, family and friends.

He owns and manages a small computer game club with eight computers. His club does not yet have internet or a landline; however, he would like to add the internet and more computers when he can afford them.

Currently, Parxat maintains all of the computers but knows he may need help with some computer problems in the future. Other club owners that he has known have had to shut down after two to three years because the equipment has broken down and the owners cannot get the old equipment fixed or afford new. Right now he is not sure who he would ask for help if one of his computers needed maintenance that he could not perform himself.

Parxat has always relied heavily on a system of personal recommendations when looking for professional services. He feels that one should *"trust the advice of friends because they are to be trusted."*

## Parxat's Goals for MoSoSo Directory

- Would seek recommendations for professional help such as plumbers and computer maintenance
- Would like to create a public recommendation for his computer club
- Groups he would join or create
  - Family
  - Clients from his computer club
  - Friends through work

## Key Significant Differences

Uses the phone for work calls

Bought his mobile phone (not a gift)

Tech savvy compared to other groups

## Personal Information

**Age:** 43 years

**Profession:** Owns and manages computer game club with eight computers

**Lives:** In the capital city of Bishkek

**Home Life:** Lives with his wife and two sons

**Russian:** Can speak and read fluently

**Primary Home Language:** Kyrgyz

**Primary Work Language:** Russian

**Schooling:** He has a degree in economics focused on finance and credit from Kyrgyzstan Slavonic University

**Income:** 5200 soms a month (approx \$140.00)

## Technical Information

**Internet Use:** Yes, at least occasionally

**Length of use:** 36 months

**Use how often:** 1-2 days a week

**Where use:** Most often at a friend's internet cafe

**Computer User:** Yes

**How often:** Several times a day at work

**Cable or Satellite TV:** Yes

**Home Landline:** Yes

## Mobile Phone Use

**Length of use:** 28 months

**How acquired:** Bought his phone new

**Use how often:** Usually a few times a day

**For:** 60% personal calls, 40% work calls

**SMS:** Yes: 70% voice, 30% text

## Feelings and concerns:

Concerned that mobile phone activity is monitored

Would miss his phone very much if he did not have it (rated 4 on a scale of 1-4)

Feels mobile phone access is too expensive

Primary persona: represents 55% of survey respondents who own mobile phones

# Personas

## Parxat Persona Data Detail

**Photo:** Older male participant from interview KG\_R1. The participant is actually a field worker from Kara Baita. His personal data was actually used for Roza's husband.

**Motivation:** We placed the 460 survey participants with mobile phones in one of three groups based on their responses. We found that 352 of these respondents claimed motivations that fell into one of the three final motivation groups without overlap.

There were 194 individuals in the practical motivation group. Almost all members of this group (99%) gave a need to make calls when away from home or work as the motivation for acquiring a mobile phone, 2% were also motivated by mobile phones being cheaper than land lines and 2% by getting a good price for the phone.

**Name:** Parxat is the name of a top party member in the Krygyz parliament.

**Parxat Practical**

**Primary Motivation to acquire phone:**  
I got my mobile phone to make calls when I am away from work or home.

**Additional comments:**  
I got my phone to make calls when I am away from work or home.

**Personal Profile**

**Age:** 43 years

**Profession:** Owns and manages computer game club with 400 computers

**Place of residence:** Lives in the capital city of Bishkek

**Work Life:** Lives with his wife and two sons

**Primary Home Language:** Kyrgyz

**Primary Work Language:** Russian

**Schooling:** He has a degree in economics located at Kyrgistan State University

**Income:** 2000 soms a month (approx. \$200)

**Technical Information**

**Internet Use:** Yes, at least occasionally

**Length of use:** 20 months

**Use how often:** 2-3 times a week

**When use:** Most often at a friend's internet cafe

**Computer User:** Yes

**Home or Satellite TV:** Yes

**Cable or Satellite TV:** Yes

**Home Landline:** Yes

**Mobile Phone Use**

**Length of use:** 20 months

**How acquired:** Bought his phone new

**Use how often:** Mostly a few times a day

**For:** 80% personal calls, 80% work calls

**SMS:** No, 30% voice, 30% text

**Feelings and concerns:**  
Concerned that mobile phone activity is monitored  
Would miss the phone very much if he did not have it (scale of 1-4)  
Feels mobile phone access is too expensive

**Status:** Parxat represents the most important persons with 55% of the survey respondents with mobile phones in this group.

**Goals:** The father and oldest son from KG\_UF1, the father from KG\_R1 and the second friend from KG\_R1 best fit the practically motivated group. These goals were based on stories they conveyed about difficulties they had encountered when looking for professional help especially descriptions given by the male friend in KG\_R1 from his computer club business.

**Profile:** This profile description was based on one of the male friend participants from interview KG\_R1. The last advice quote was a direct quote from the father in the KG\_UF1 interview.

**Mobile Phone description:** 91% of the practical group use their phones for personal calls; 41% for work - the most of any group. This description also reinforces the primary motivation of the group, "I got my phones to make calls when I am away from home or work". It is notable that this primary motivation is significantly negatively associated with the primary motivations in the other two groups.

**Quote:** This is a direct quote from the father participant in Interview KG\_UF1.

- Key Difference:** 41% of the practical motivation group used their phones for work - this was significantly more than the other two groups.
- Key Difference:** 41% of the practical motivation group bought their phones new - more than any other group (most survey respondents received their phones as gifts).
- Key Difference:** The practical group had more experience with computers and internet than any of the other two groups: 49% used computers, 39% owned a computer (significant difference), 29% used the internet.
- Age:** Actual mean age of the group was 35.9. This was the oldest mean age, but was skewed higher here to emphasize the difference with the other groups.
- Profession:** This profession is based on one of the male friends from Interview KG\_R1. 30% of the practical group was employed which was significantly higher than any other groups.
- Lives:** 66% of practical users live in an urban environment - this is also the urban environment location of the interviews.
- Home Life:** Mean family size was 3.5 people for the practical group.
- Russian:** 89% of the practical group speak and read Russian.
- Primary Home Language:** 50% claimed their primary language at home was Kyrgyz. This was the highest of any language.
- Primary Work Language:** 62% of those employed spoke Russian at work.
- Schooling:** This degree is also based on male friend owned the computer club from Interview KG\_R1. Also, the practical group had significantly more education (avg. 12.5 years) than the replacement group (avg. 11.1 years) and the general population (avg. 10.7 years).
- Income:** This is slightly higher than the average income of 4775 soms (\$137.00) based on August 2008 exchange rate and data from <http://enews.ferghana.ru/news>.
- Internet Use:** 29% of this group used the internet - the highest of any group.
- Length of use, Use how often, Where Use:** All mean numbers based directly on survey data.
- Computer Use:** 49% of this group used computers - the highest of any group.
- How Often:** mean number from the survey data.
- Cable or Satellite TV:** 29% of this group had cable or satellite TV - the second most of any group.
- Home Landline:** 51% have home landlines - the second most of any group.
- Mobile Phone:**
  - Length of Use:** mean number from the survey data
  - How acquired:** 41% of the practical motivation group bought their phones new - more than any other group (most survey respondents received their phones as gifts).
- Use how often:** mean number from survey data
- For:** All groups used their phones mostly for personal calls. 41% of the practical motivation group used their phones for work. This was statistically significantly more than the other two groups.
- SMS:** 27% of the practical group used SMS. This split was based on the numbers given by the older son participant from Interview KG\_UF1.
- Feelings and concerns:**
  - 61% felt mobile activity was monitored. This was statistically significantly higher than any other group (no other group was higher than 45%).
  - 57% claimed they would miss their phones "a lot" - this was the most of any group ;
  - 66% felt mobile access was too expensive.

# Personas

## Personal Profile

*"We just talk to our friends...things like did you hear that this or that happened - in our communication rumors are the official news, and gossip works"*

For Shirin, keeping in contact with friends is the most important thing about mobile phones.

She is a full time student (junior) at American University of Central Asia (AUCA), studying business administration. She also works part time as a bartender in a cafe.

Shirin is part of an unregistered student association at school that organizes cultural and historical meetings at a local cafe. She also enjoys arranging parties for her friends.

She is interested in social networking applications on the internet, but has found it boring, stating *"the first time is interesting then you get bored because you already know everybody."*

## Shirin's Goals for MoSoSo Directory

- Would use the service most to create groups of friends
- Would like to broadcast messages to particular groups or to tell people where there will be social gatherings
- Would like to retrieve messages from other members of a group
- Groups she would join or create
  - Family
  - Friends from work and school
  - Associations through her unregistered student organization

## Key Significant Differences

Uses the phone to primarily to call friends  
Least likely to feel mobile access is too expensive  
Somewhat tech savvy

## Personal Information

**Age:** 20 years  
**Profession:** Student and works part time as a bartender in a local cafe  
**Lives:** In the capital city of Bishkek  
**Home Life:** Lives with her dad and an older brother. She also has around 30 cousins in towns.  
**Russian:** Can speak and read fluently  
**Primary Home Language:** Kyrgyz  
**Primary Work Language:** Kyrgyz  
**Schooling:** She is a full time student (junior) at the American University of Central Asia studying business administration  
**Income:** 2000 soms a month (approx \$55.00)

## Technical Information

**Internet Use:** Yes, at least occasionally  
**Length of use:** 33 months  
**Use how often:** About once a week  
**Where use:** Most often at an internet cafe  
**Computer User:** Yes  
**How often:** A few times a week at school  
**Cable or Satellite TV:** Yes  
**Home Landline:** Yes

## Mobile Phone Use

**Length of use:** 25 months  
**How acquired:** Was given the phone by a cousin  
**Use how often:** Several times a day  
**For:** 80% personal calls, 20% work calls  
**SMS:** Yes: 65% voice, 35% text

## Feelings and concerns:

The least likely of any group to feel that mobile phones are too expensive  
Feels that mobile phones are important to her future career

# Personas

## Shirin Persona Data Detail

**Photo:** Younger female participant from the interview with three urban young friends (KG\_UY1). The participant actually lives in Bishkek, is eighteen years old and is a student at the American University of Central Asia.

**Motivation:** We placed the 460 survey participants with mobile phones in one of three groups based on their responses. We found that 352 of these respondents claimed motivations that fell into one of the three final motivation groups without overlap.

There were 113 individuals in the social motivation group. A majority (85%) wanted people to reach them at all times, 19% of this group got their mobile phone because their friends all had them, and 4% wanted to receive voicemail.

**Name:** Shirin is a somewhat common female name in Kyrgyzstan. It is of Persian origin.

**Shirin Social**

Primary Motivation to acquire phone:  
I like people to reach me at all times.

Additional motivation:  
My friends all have mobile phones.

**Personal Profile**

The user will be female, single, 18-24 years old, and lives in Bishkek. It is an urban environment with good internet access and mobile phone use.

For Shirin, keeping in contact with friends is the most important thing mobile phones do.

She is a full-time student at American University of Central Asia (AUCA), attending business administration. She works part-time as a bartender in a local cafe.

She is a member of an underground student organization on the internet, but has been in Bishkek, attending the forum or otherwise that has just been closed because she attended from Bishkek.

**Shirin's Goals for MoSo Directory**

- What are the primary goals or objectives of Shirin?
- What are the secondary goals or objectives of Shirin?
- What are the tertiary goals or objectives of Shirin?
- What are the quaternary goals or objectives of Shirin?

Friends from work and school communicate through her underground student organization.

**Key Significant Differences**

- Uses the phone to primarily to call friends
- Less likely to feel mobile access is too expensive
- Sometimes text users

**Personal Information**

- Age: 20 years
- Profession: Student and works part-time as a bartender in a local cafe
- Lives in: the capital city of Bishkek
- Home Life: Lives with her dad and another brother. She also has several cousins in Bishkek.
- Russian: Can speak and read fluently
- Primary Home Language: Kyrgyz
- Primary Work Language: Kyrgyz
- Schooling: She is a full-time student (junior) at the American University of Central Asia, studying business administration.
- Income: 2000 soms a month (approx. \$50 US)

**Technical Information**

- Internet Use: Yes, at least occasionally
- Length of use: 20 minutes
- Use how often: About once a week
- Where use: Most often at an internet cafe
- Computer Use: Yes
- New often: A few times a week at school
- Cable or Satellite TV: Yes
- Home Landline: Yes

**Mobile Phone Use**

- Length of use: 20 minutes
- How acquired: Was given the phone by a cousin
- Use how often: Several times a day
- Use for: 80% personal calls, 20% work calls
- SMS: Yes, 10% voice, 35% text
- Feelings and concerns: The least likely of any group to feel that mobile phones are too expensive. Feels that mobile phones are important to her future career.

Primary personal represents 32% of survey respondents with own mobile phones.

**Status:** Shirin represents the second most important persona with 32% of the survey respondents with mobile phones in this group.

**Goals:** Since the youngest son from the KG\_UF1, and five of the younger participants from KG\_UY1 and KG\_RY1 best fit the socially motivated group, these goals were based on how mobile phone use could have helped them in stories they conveyed about their lives. These stories were also used to create the scenarios for Shirin.

**Profile:** This profile description was an amalgamation of participants from two interviews: one with a group of three young friends in Bishkek (urban) and the other with a group of three young friends in Kara Balta (rural). The last quote was a direct quote from one of the participants in Bishkek from the KG\_UY1 interview.

**Mobile Phone description:** 93% of the social group use their phones for personal calls - the most of any group; 38% for work.

**Quote:** This is a direct quote from one of the participants in when asked about where they looked for news and information.

- Key Difference:** 93% of the social motivation group used their phones for work - this slightly more than the other two groups
- Key Difference:** Only 50% of the social motivation group felt that mobile phone access was too expensive while the other two groups over 64% felt it was too expensive. This was a statistically significant difference.
- Key Difference:** The social group had the second most experience with computers and internet: 43% used computers, 28% owned a computer, 25% used the internet.
- Age:** Actual mean age of the group was 33.6. This was the youngest mean age, but was skewed lower here to emphasize the difference with the other groups.
- Profession:** This profession is based on three interviews that included a total of seven younger people under the age of 27. Four were students. This part time job was based the profile of an urban male student in KG\_UY1.
- Lives:** 64% of social users live in an urban environment - this is also the urban environment location of the interviews.
- Home Life:** Mean family size was 3.8 people for the social group. The multiple cousins reference was based on information from a female interview participant.
- Russian:** 77% of the social group speak and read Russian.
- Primary Home Language:** 62% claimed their primary language at home was Kyrgyz.
- Primary Work Language:** 56% of those employed spoke Kyrgyz at work.
- Schooling:** The degree and university are based on the male friend from the KG\_UY1 interview - the same participant that we based the part-time job upon. Members of the social group on average have 12.6 years of schooling - the most of any group.
- Income:** This is lower than the average income of 4775 soms (\$137.00) based on August 2008 exchange rate and data from <http://enews.farghana.nu/news>. Since our persona was a student working part time we assumed a lower than average income.
- Internet Use:** 26% of this group used the internet - the second highest of any group.
- Length of use, Use how often, Where Use:** All mean numbers based directly on survey data.
- Computer Use:** 43% of this group used computers - the second highest of any group.
- How Often:** mean number from the survey data.
- Cable or Satellite TV:** 32% of this group had cable or satellite TV - the most of any group.
- Home Landline:** 54% have home landlines - the most of any group.
- Mobile Phone:**
  - Length of Use:** mean number from the survey data
  - How acquired:** 42% of the social motivation group received their phones as gifts from family members - this was the most common way to acquire a phone for this group.
  - Use how often:** mean number from survey data
  - For:** While all groups used their phones mostly for personal calls, 93% of the social motivation group used their phones for personal calls - the most of any group.
  - SMS:** 27% of the social group used SMS. This split was based on the numbers given by the young rural participants in KG\_RY1
  - Feelings and concerns:**
    - 51% felt that mobiles phones were too expensive which was significantly less than the other two groups where over 64% felt they were too expensive.
    - 83% felt mobile phones were important to their future career - the most of any group.

# Personas

## Roza Replacement

**Primary Motivation to acquire phone:**  
I have no home phone

**Associated motivations:**  
It takes too long to get a home phone

### Personal Profile

*"There are only so many services provided, but not enough for middle class people... it would be nice if there was the one server that gave the information about everything that was needed for marshukas (buses) and other things."*

For Roza, who does not have a landline at home, a mobile phone is a very important device that allows her to stay in contact with her friends and family; however, she would like to see more affordable mobile phone services for "middle class" people like her.

There is only one landline in a community building in her village that closes at 5 PM every day.

While Roza herself is not tech savvy, she does not use the internet or computers. However, she recognizes the importance of technology for her daughters, and would like to have a computer at home while they are in school.

Roza and her husband rely on their friends and family to find specialist to complete services they need. Recently, she needed to find a mechanic and used her social network, stating "...it's better to find someone through your friends."

### Roza's Goals for MoSoSo Directory

- Would be more likely to seek a recommendation for services than to make one
- Would want to access the service without using text
- Would like to find recommendations for professional services from other members of a group
- Groups she would join
  - Family
  - Neighbors
  - May look in the public area for professional services

### Key Significant Differences

Least likely to use the phone for work  
Lives in a rural area  
Not tech savvy

### Personal Information

**Age:** 35 years  
**Profession:** Housewife - her husband is a driver for an agricultural corporation (for 23 years)  
**Lives:** In Ceragulak, a rural village  
**Home Life:** Lives with her husband, son and two daughters  
**Russian:** Can speak and read Russian  
**Primary Home Language:** Kyrgyz  
**Primary (Husband's) Work Language:** Kyrgyz  
**Schooling:** Completed secondary school  
**Income:** (Husband's income) 4200 soms a month (approx \$110.00)

### Technical Information

**Internet Use?:** No  
**Computer User?:** No, but she would like to get a computer for her two daughters who are still in school  
**Cable or Satellite TV:** No  
**Home Landline:** No

### Mobile Phone Use

**Length of use:** 17 months  
**How acquired:** Was given the phone by her brother  
**Use how often:** Three to five days a week  
**For:** Primarily for personal calls  
**SMS:** No, but has considered it  
**Feelings and concerns:**

She feels it is difficult to use a mobile phone when you do not know English  
She is concerned that mobile phones represent a threat to local culture and ways

She feels strongly that mobile phones allow her access to important and relevant information

# Personas

## Roza Persona Data Detail

**Photo:** Middle age female participant from interview KG\_RF1. The participant was one of three participants in the interview which included her husband and a younger brother. She lives in Kara Balta, an rural area outside of Bishkek.

**Motivation:** We placed the 460 survey participants with mobile phones in one of three groups based on their responses. We found that 352 of these respondents claimed motivations that fell into one of the three final motivation groups without overlap.

There were 45 individuals in the replacement motivation group. A large majority (84%) of this group claimed to not have a phone at home, 7% said their home phone line was bad quality and 9% felt that home phones took too long to install.

**Name:** Roza, from the same derivative as Rose, is somewhat common in Kyrgyzstan. The -z spelling reflects the French, Slavic, or Yiddish influence.

### Personal Profile

"I have a mobile phone but I don't use it often. It's hard to get a home phone. I have a mobile phone but I don't use it often. It's hard to get a home phone. I have a mobile phone but I don't use it often. It's hard to get a home phone."

"I don't have a home phone. I have a mobile phone but I don't use it often. It's hard to get a home phone. I have a mobile phone but I don't use it often. It's hard to get a home phone."

"I don't have a home phone. I have a mobile phone but I don't use it often. It's hard to get a home phone. I have a mobile phone but I don't use it often. It's hard to get a home phone."

"I don't have a home phone. I have a mobile phone but I don't use it often. It's hard to get a home phone. I have a mobile phone but I don't use it often. It's hard to get a home phone."

**Roza's Goals for Mobile Directory**

- Would like to use mobile phone to contact family members.
- Would like to use mobile phone to contact family members.
- Would like to use mobile phone to contact family members.

**Secondary persona: represents 13% of survey respondents with non mobile phones**

### Key Significant Differences

Lives in a rural area  
Not tech savvy

### Personal Information

Age: 35 years  
Profession: Housewife  
Home Life: Lives with her husband, son and two daughters  
Primary Home Language: Kyrgyz  
Primary Husband's Work Language: Kyrgyz  
Income: Household's income 4200 euros a month (approx \$110.00)

### Technical Information

Computer Use? No  
Cable or Satellite TV? No  
Home Location: Yes

### Mobile Phone Use

Length of use: 17 months  
How acquired: Was given the phone by her brother  
Use how often: Twice to five times a week  
SMS: Yes, but has cancelled it  
Feelings and concerns: She finds it difficult to use a mobile phone when you do not know English... She is concerned that mobile phones represent a threat to local culture and news. She finds strongly that mobile phones allow her access to much needed relevant information.

- Key Difference:** Only 18% of the replacement motivation group used their phones for work - this is the lowest of any group.
- Key Difference:** 82% of the replacement motivation group lives in a rural area. This is statistically significantly more than any other group.
- Key Difference:** The replacement group is the least tech savvy of all groups: 33% used computers, 7% owned a computer, 20% used the internet.
- Age:** Actual mean age of the group was 35.6. This was the middle mean age when compared to the other two groups.
- Profession:** This group is the least likely to be employed: only 13% of respondents in this group were employed full time (self-employment was not counted). The husbands job was based on the father participant's job from the KG\_RF1 (rural family) interview.
- Lives:** 82% of replacement users live in a rural environment. This is statistically significantly more than any other group.
- Home Life:** Mean family size was 4.4 people for the replacement group. This is statistically significantly larger than any other group.
- Russian:** 78% of the replacement group speak and read Russian.
- Primary Home Language:** 65% of this group claimed their primary language at home was Kyrgyz.
- Primary Work Language:** 62% of those employed spoke Kyrgyz at work.
- Schooling:** 65% of the replacement group claimed secondary school as their highest level of education. Members of the replacement group on average have 11.1 years of schooling which is statistically significantly lower than the other two groups (but still more than non-mobile phone users at 10.7 years).
- Income:** This is lower than the average income of 4775 soms (\$137.00) based on August 2008 exchange rate and data from <http://enews.ferghana.ru/news>. Since replacement users tend to live in a rural area we made them less affluent than the average.
- Internet Use:** 20% of this group used the internet - the lowest of any group.
- Computer Use:** 33% of this group used computers - the lowest of any group. The additional information about the desire for a computer is from the mother from the rural family interview (KG\_RF1).
- Cable or Satellite TV:** 9% of this group had cable or satellite TV. This is statistically significantly lower than any other group.
- Home Landline:** 2% have home landlines, which makes sense since a lack of a landline is the primary motivation for the group. Not surprisingly, this is statistically significantly lower than any other group.
- Mobile Phone:**
  - Length of Use:** mean number from the survey data
  - How acquired:** 56% of the replacement motivation received their phones as gifts from family members. This was the most of any group.
  - Use how often:** mean number from survey data
  - For:** 91% of the replacement motivation group used their phones for personal calls.
  - SMS:** Only 13% of the replacement group used SMS. This was the lowest of any group.
  - Feelings and concerns:**
    - 70% expressed concerns that one needs to know English to use a mobile phone. This was statistically significantly higher than any other group.
    - 32% were concerned that mobile phones represented a threat to local culture and ways. This was higher than the other two groups.
    - 93% expressed that mobiles allowed access to relevant information. This was the highest of any group.

- Status:** Roza represents the third most important persona with 13% of the survey respondents with mobile phones in this group, as such, she is a secondary persona.
- Goals:** These goals were based on how mobile phone use could have helped in stories conveyed by the family participants: KG\_UF1 and KG\_RF1. This group would be the least likely to use text to access the service.
- Profile:** This profile description was based primarily from the father in the interview with the rural family (KG\_RF1). The last quote was from the father in the urban family interview, but reflected the scenario from the rural family of trying to connect a gas line. (See scenarios). The village phone line story is directly from the rural family interview.
- Mobile Phone description:** 91% of the replacement group use their phones for personal calls; and only 18% for work - this represents the lowest use for work of any group.
- Quote:** This is a direct quote from the father participant from the urban family interview (KG\_UF1) when asked about where he found a mechanic. The statement emphasizes the importance of social networks when finding services.

2c: Design Research Check-In due Tonight

2d: Design Research Review due Monday 10/16

2e: Task Review due Thursday 10/19

2f: Design Check-In (3x4) Due Monday 10/23

2g: Design Review (1x2) Due Thursday 10/26

# Selecting Tasks

Real tasks people have faced or requested

as supported by your design research

collect any necessary materials

Should provide reasonable coverage

compare check list of functions to tasks

Mixture of simple and complex tasks

easy tasks (common or introductory)

moderate tasks

difficult tasks (infrequent or for power use)

# What Should Tasks Look Like?

Say what person wants to do, but not how  
allows comparing different design alternatives

Be specific, stories based in concrete facts

say who person is (e.g., using personas or profiles)

design can really differ depending on who

give 'names' (allows referring back with more info later)

characteristics of person (e.g., job, expertise)

story forces us to fill in description with details

Sometimes describe a complete “accomplishment”

forces us to consider how features work together

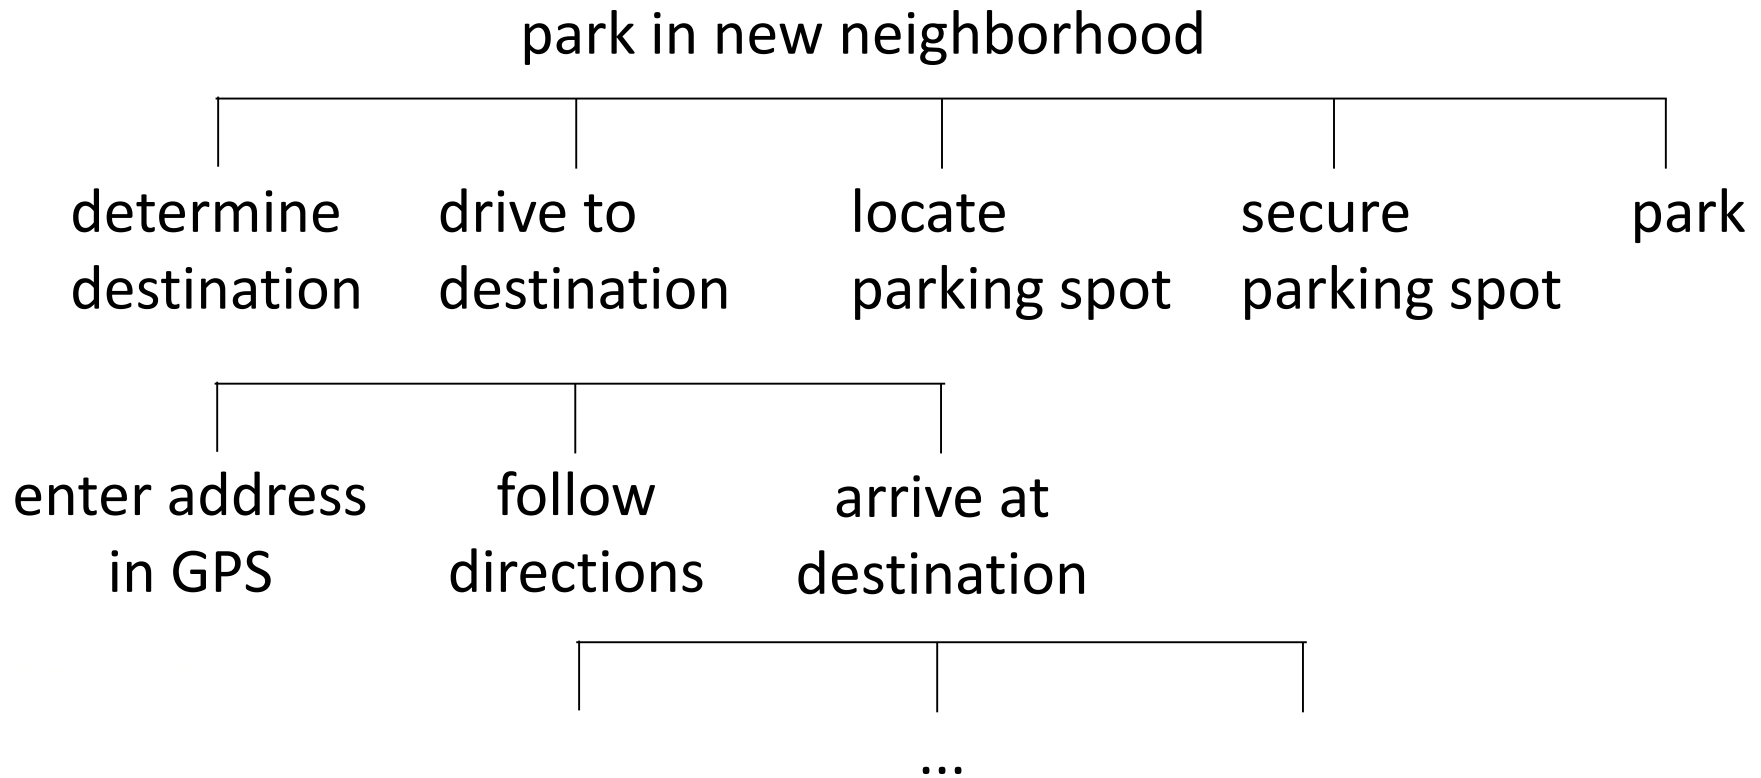

filename task example

# Task: Park in a New Neighborhood

Peter is going to brunch on a Sunday with his roommates. He is trying a new place he found on Yelp. He has the address for the place and he is using his phone's GPS for directions. He leaves the apartment with his roommates at 8:30am and he wants to beat the crowd so they won't have to wait in line. He is driving a Toyota Corolla that he has owned for five years. It is a rainy day and he doesn't have an umbrella.

# Hierarchical Task Analysis

Steps of the task execution (detailed in a hierarchy)

# Hierarchical Task Analysis

Steps of the task execution (detailed in a hierarchy)

... Or step back a level and motivate ridesharing

# Using Tasks in Design

Write up a description of tasks

formally or informally

run by people and rest of the design team

get more information where needed

Manny is in the city at a restaurant and would like to call his friend **Sherry to see when she will be arriving. She called from a friend's** house while he was in the bus tunnel, so he missed her call. He would like to check his missed calls and find the number to call her back.

# Using Tasks in Design

Rough out an interface design

discard features that do not support your tasks  
or add a real task that exercises that feature  
major elements and functions, not too detailed  
hand sketched

Produce scenarios for each task

what person does and what they see  
step-by-step performance of task  
illustrate using storyboards

# Scenarios

Scenarios are design specific, tasks are not

Scenarios force us to show how things work together settle arguments with examples but these are only examples, and may need to look beyond flaws

Show people storyboards topic for next Thursday

# Tasks, Personas, and Scenarios

**Task:** a design-agnostic objective

**Persona:** a fictional person with a backstory

**Scenario:** narrative that demonstrates a persona completing a task using a particular design

**Use Case:** in software engineering, describes requirements using one or more scenarios

# Tasks in Your Projects

Say what is accomplished, not how

Real tasks that people currently encounter,  
or new tasks your design will enable

Reasonable coverage of the interesting aspects  
of your problem and your design space

Range of difficulty and complexity

Park at the zoo

Park Friday night in Ballard

Park at the airport

The screenshot shows the website for the Computing Research Consortium (CCC) event titled "Computing Research: Addressing National Priorities and Societal Needs 2017". The page features a navigation menu with links for ABOUT, VISIONING, LEADERSHIP DEVELOPMENT, TASK FORCES, RESOURCES, EVENTS, and BLOG. The main header includes the CCC logo and the tagline "Catalyzing the computing research community and enabling the pursuit of innovative, high-impact research." Below the header is a large banner with the event title and a graphic of people icons connected by lines. The event details section specifies the dates "October 23-24, 2017" and the location "The InterContinental Washington, D.C. at the Wharf, 801 Wharf Street, SW, Washington, D.C. 20024". A map of the Washington D.C. area is provided. The "Event Contact" section lists Ann Orbinis as the contact person. The "Event Type" is "2017 Events, Special Event" and the "Event Category" is "CCC". The "Tags" section includes "grand challenges, research, symposium". The "Overview" section provides a detailed description of the event's purpose and themes, including "Intelligent Infrastructure for our Cities and Communities", "Security and Privacy for Democracy", "AI and Amplifying Human Abilities", and "Data, Algorithms, and Fairness". A "Livestream" button is visible at the bottom of the page.

Overview

Over the past several decades, computing and information technologies have shaped our lives, our society, and our physical world in ways we never would have imagined. An increasing number of jobs depend on IT, IT shrinks time and distance in our social lives, agriculture and transportation are rapidly becoming IT-based, and IT holds the promise of revolutionizing education and healthcare. Although many of the IT-powered innovations that are reshaping our society can be traced to fundamental computing-related research, their impact has been magnified through powerful applications in areas of broad societal need and opportunity.

Over the past 11 years, the Computing Community Consortium has hosted dozens of research visioning workshops to imagine, discuss, and debate the future of computing and its role in addressing societal needs. The second CCC Computing Research symposium draws these topics into a program designed to illuminate current and future trends in computing and the potential for computing to address national challenges.

The two days are organized around four main themes:

Intelligent Infrastructure for our Cities and Communities

- Intelligent infrastructure is already transforming our nation's cities and communities, but the technological revolution is just now beginning. The potential for major improvements in public health and safety, efficient use of our resources, and a higher quality of life for all citizens are enormous. At the same time, new risks arise as we attempt to integrate large scale data collection, advanced cyberphysical systems, and autonomous vehicles into our daily lives. This session will highlight some of the major advances now taking place, while at the same time emphasizing the substantial body of research, much of it crossing disciplinary boundaries, that still needs to be done.

Security and Privacy for Democracy

- Computing research enables new technology to help society cope with information security and privacy risks. Learn about how differential privacy will enable new understanding of the population while protecting privacy and about technologies used to help journalists and human rights workers to communicate safely in oppressive regimes.

AI and Amplifying Human Abilities

- This panel will examine the emerging role of AI in augmenting human abilities in new and powerful ways. In particular, this session will examine the spectrum of human and machine capabilities and how we develop systems that provide a seamless interface between the two. Speakers will also ground their remarks in application areas ranging from health, transportation, universal access, data analysis, and education.

Data, Algorithms, and Fairness

- Data-driven and algorithmic decision making increasingly determine how businesses target advertisements to consumers, how police departments monitor individuals or groups, how banks decide who gets a loan and who does not, how employers hire, how colleges and universities make admissions and financial aid decisions, and much more. As data-driven decisions increasingly affect every corner of our lives, there is an urgent need to ensure they do not become instruments of discrimination, barriers to equality, and threats to social justice.

**Task:** a design-agnostic objective

**Persona:** a fictional person with a backstory

**Scenario:** narrative that demonstrates a persona completing a task using a particular design

**Use Case:** in software engineering, describes requirements using one or more scenarios

# Tasks in Your Projects

Say what is accomplished, not how

Real tasks that people currently encounter,  
or new tasks your design will enable

Reasonable coverage of the interesting aspects  
of your problem and your design space

Range of difficulty and complexity

Park at the zoo

Park Friday night in Ballard

Park at the airport

# Today

Finish with tasks, personas, and scenarios

Review core design terminology

# Design Terminology

Design of Everyday Things reviews a common and useful vocabulary of design

We will use these in feedback and conversations without even realizing that we are doing it

You should know these terms and recognize them in practice

# Objectives

Be able to:

Describe Norman's execution-evaluation cycle, including the Gulfs of Execution and Evaluation.

Define implementation, manifest, and mental models, describe their relationships and how they are created.

Describe and identify examples of affordances, including false and hidden affordances.

Describe and identify examples of metaphors.

# Objectives

Be able to:

In terms of mental models, describe and differentiate affordances, metaphors, and idioms.

Describe and identify examples of visibility, constraints, and mappings.

In terms of mental models, describe and identify examples of consistency, including internal and external consistency.

In terms of mental models, describe the effect of modes.

# Norman's Execution-Evaluation Cycle

1. Establish the goal.
2. Form the intention.
3. Specify the action sequence.
4. Execute the action sequence.
5. Perceive the system state.
6. Interpret the system state.
7. Evaluate the system state with respect to the goals and intentions.

Revise  
Goals

# Turning on the Light

1. Establish the goal

Increase light in the room

2. Form the intention

To turn on the lamp

3. Specify the action sequence

Walk to the lamp, reach for the knob, twist the knob

4. Execute the action sequence

[walk, reach, twist]

5. Perceive the system state

[hear “click” sound, see light from lamp]

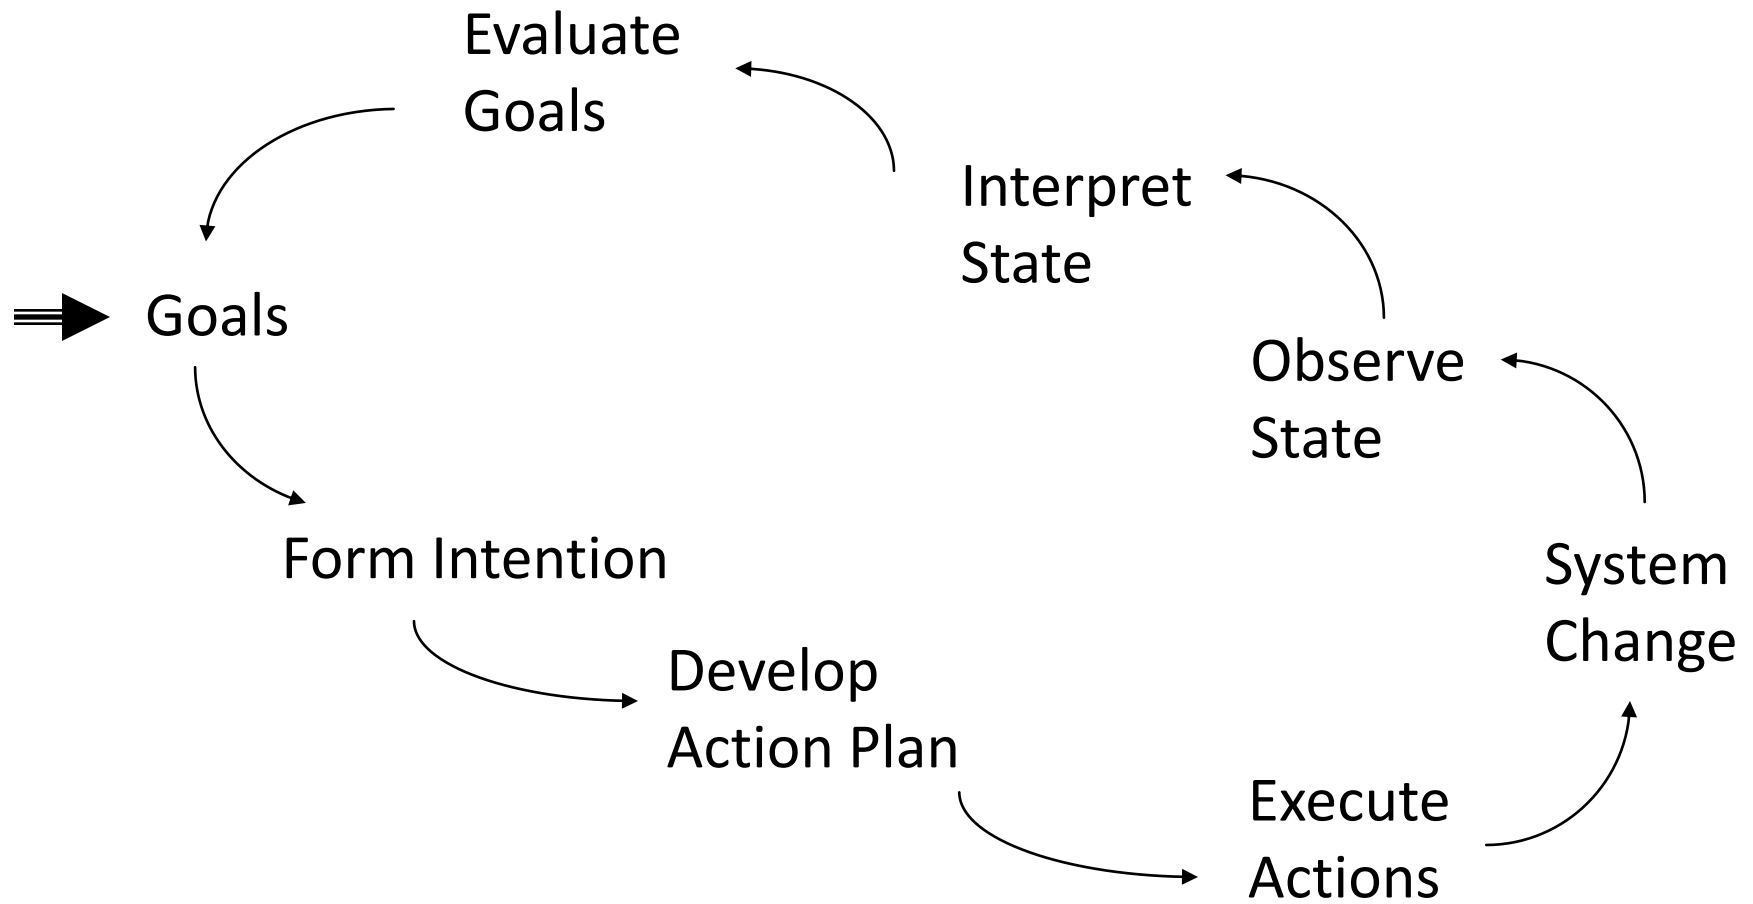

6. Interpret the system state

The knob rotated. The lamp is emitting light. The lamp seems to work

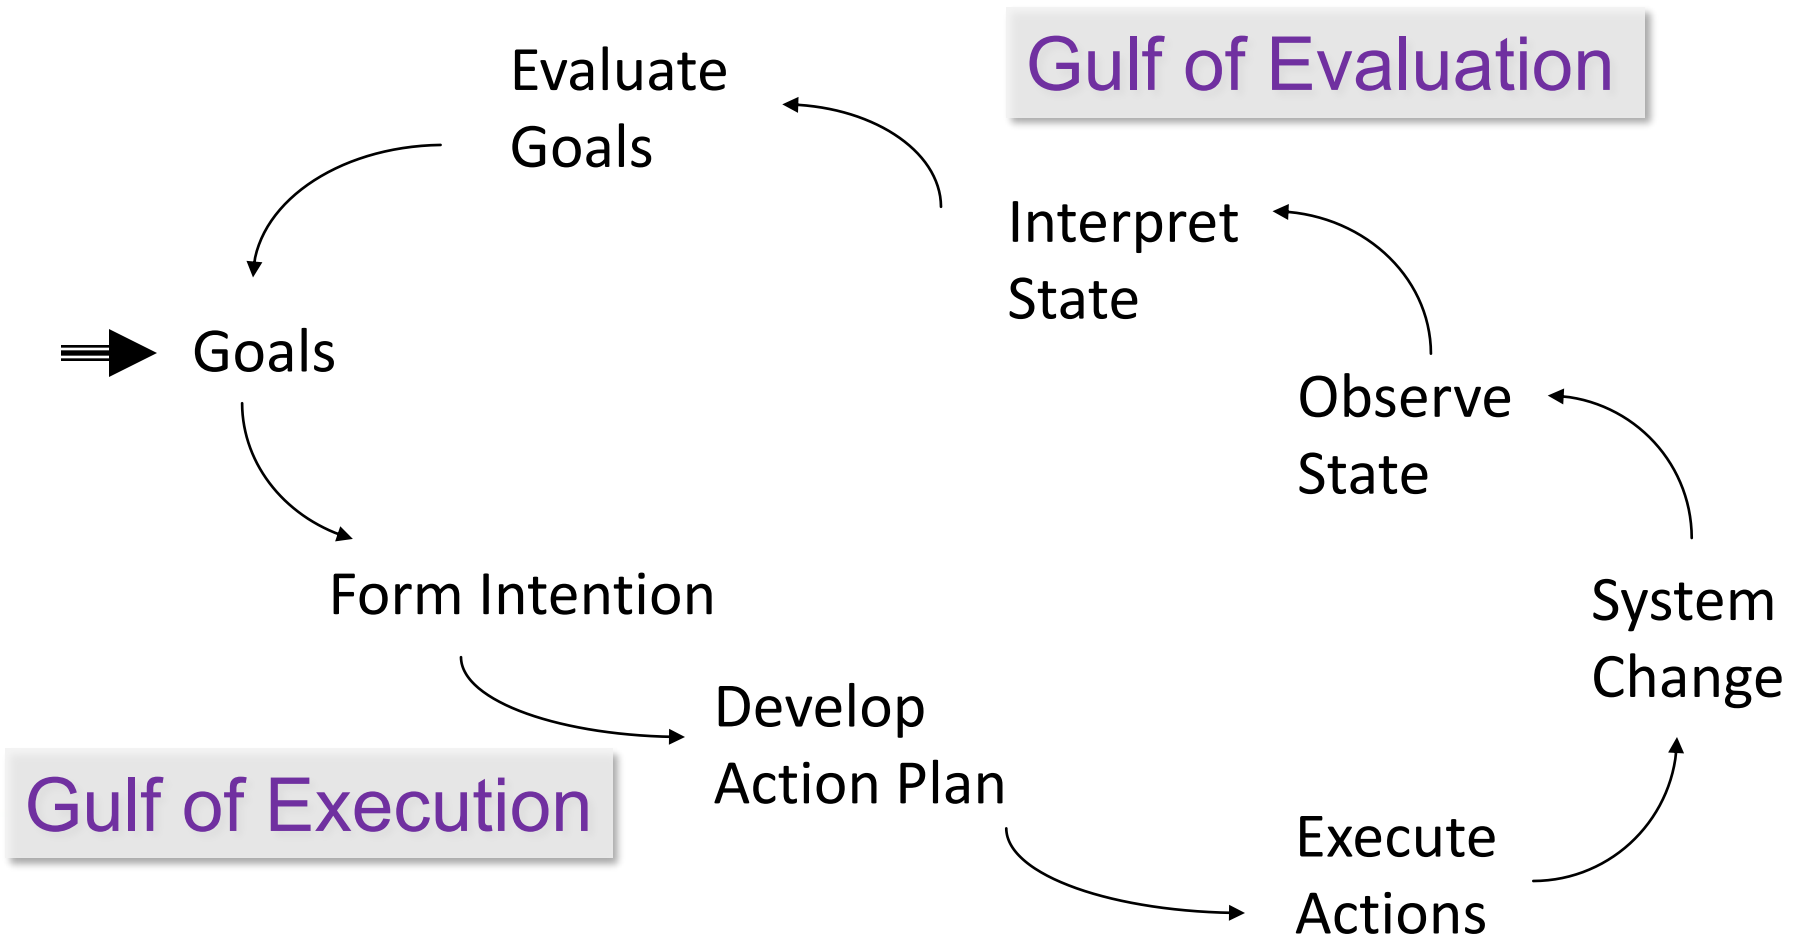

7. Evaluate the system state with respect to the goals and intentions

The lamp did indeed increase the light in the room [goal satisfied]

# Norman's Execution-Evaluation Cycle

# Norman's Execution-Evaluation Cycle

# Bridging the Gulfs

Gulf of Execution: “How do I do it?”

Commands and mechanisms need to match the goals, thoughts, and expectations of a person

Gulf of Evaluation: “What does it mean?”

Output needs to present a view of the system that is readily perceived, interpreted, and evaluated

People build mental models to anticipate and interpret system response to their actions

What can I do?

How do I do it?

What result will it have?

What is it telling me?

# Cooper's Mental Model Terminology

## Implementation Model

How it works

(Design Model, Designer's Conceptual Model)

## Manifest Model

How it presents itself

(System Image)

## Mental Model

How a person thinks it works

(User Model, User's Conceptual Model)

# Cooper's Mental Model Terminology

## Implementation Model

How it works

(Design Model, Designer's Conceptual Model)

## Manifest Model

How it presents itself

(System Image)

## Mental Model

How a person thinks it works

(User Model, User's Conceptual Model)

These terms  
are sloppy and  
ambiguous out  
in the world

# Manifest and Mental Models

Designer projects their model into an artifact

Person forms their model based on interaction

People struggle until model matches manifest model

Update mental model in response to breakdowns

Matching the implementation model is not necessary

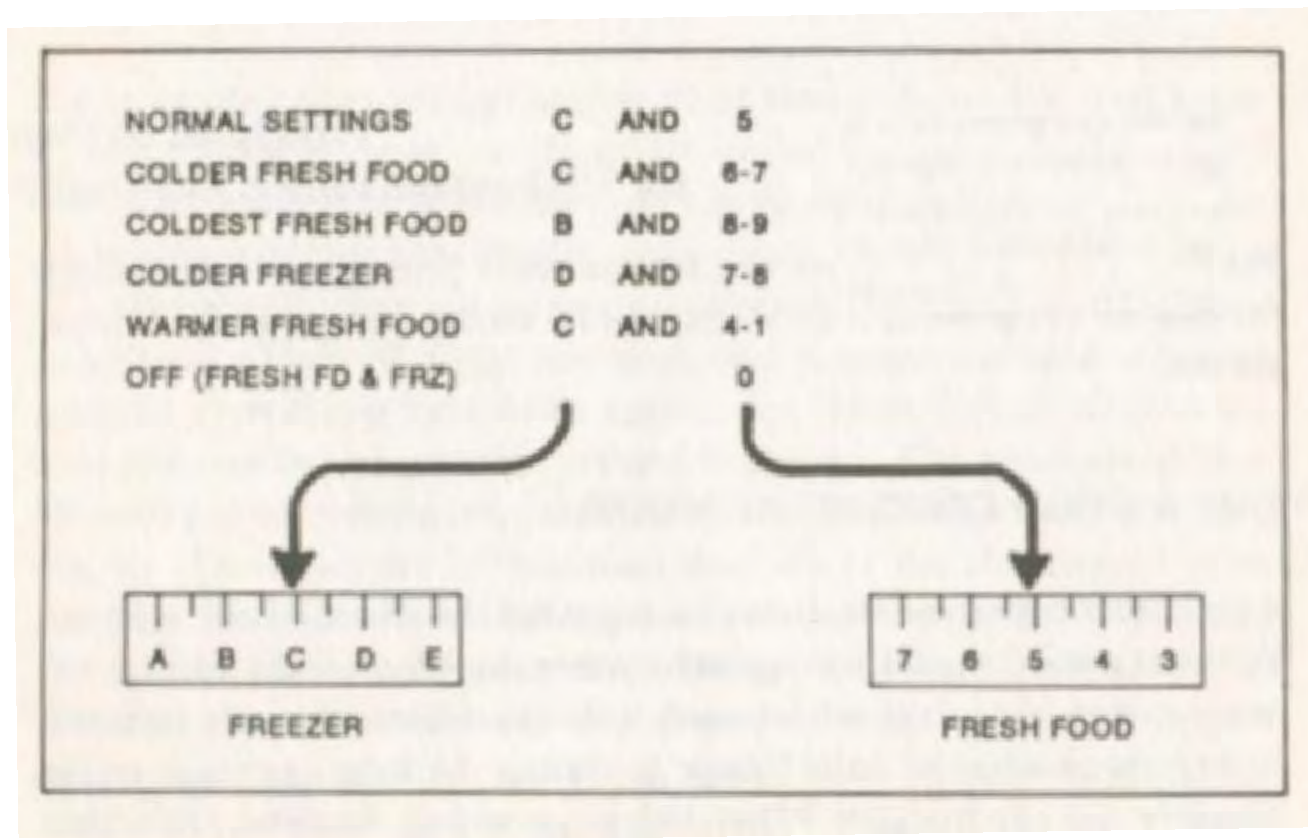

# Mental Models

Problem: freezer too cold, fresh food just right

# Manifest Model

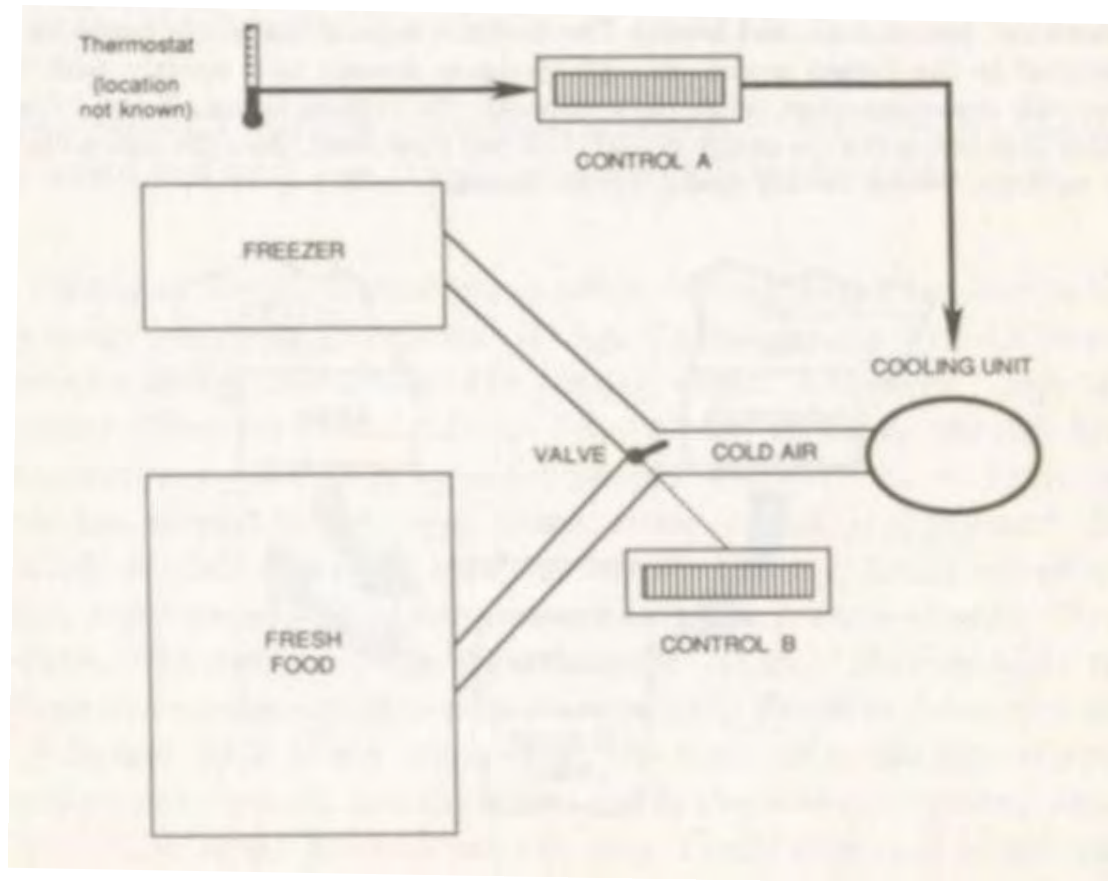

What if I want to make just the freezer warmer?

# A Sensible Mental Model

“The Freezer Control controls the freezer temperature and the Fresh Food Control controls the fresh food temperature”

# The Implementation Model

# A Problem with Feedback

# The Implementation Model

Why is there a problem?

Can you fix the problem?

# The Implementation Model

“Design depends largely on constraints.”  
Charles Eames

Why is there a problem?

Cost constraints

Can you fix the problem?

Make controls correspond to a person's mental model

Make controls correspond to the implementation model

# Building the Right Model

Having the right model helps people bridge the Gulf of Execution and the Gulf of Evaluation

How can we help people build the right models:

Affordances

Metaphors

Visibility

Knowledge in the World

Constraints

Mapping

Consistency

Modes

# Affordances

Visual clue to interaction

knobs afford turning

levers afford moving

buttons afford pushing

# Affordances

“The affordances of the environment are what it offers animals, what it provides or furnishes, for good or ill.”

Gibson, ecological approach to psychology

“The term ‘affordance’ refers to the perceived and actual properties of the thing, primarily those fundamental properties that determine just how the thing could possibly be used.”

Norman

# What's the Affordance?

# Affordances

# Affordances

Technology affordances are often based in affordances from the physical world

# Affordances

What is the affordance here?

Where does it come from?

# Affordances

What is the affordance here?

Where does it come from?

Knurling

# Sequential Affordance

Acting on a perceptible affordance leads to information indicating new affordances

*Figure 4. Sequential affordances: one affordance leads to another. Visual information indicates grasping (A & B); tactile information indicates turning (B & C).*

# Sequential Affordance

Acting on a perceptible affordance leads to information indicating new affordances

*Figure 4. Sequential affordances: one affordance leads to another. Visual information indicates grasping (A & B); tactile information indicates turning (B & C).*

# Nested Affordances

Affordances due to spatial relationships revealing what actions can be done

Proximate to, contained in, part of

Copies:

# In Other Words

An affordance is what a thing communicates about how it can be used, often by its appearance

“In general, when the apparent affordances of an artifact matches its intended use, the artifact is easy to operate. When apparent affordances suggest different actions than those for which the object is designed, errors are common.”

Gaver

Challenges arise if there is a mismatch between implied use versus intended use

# False Affordances

When there is perceptual information suggesting an implied use that does not exist

(Just an image of a button, not one that responds)

# False Affordances

# False Affordances

# False Affordances

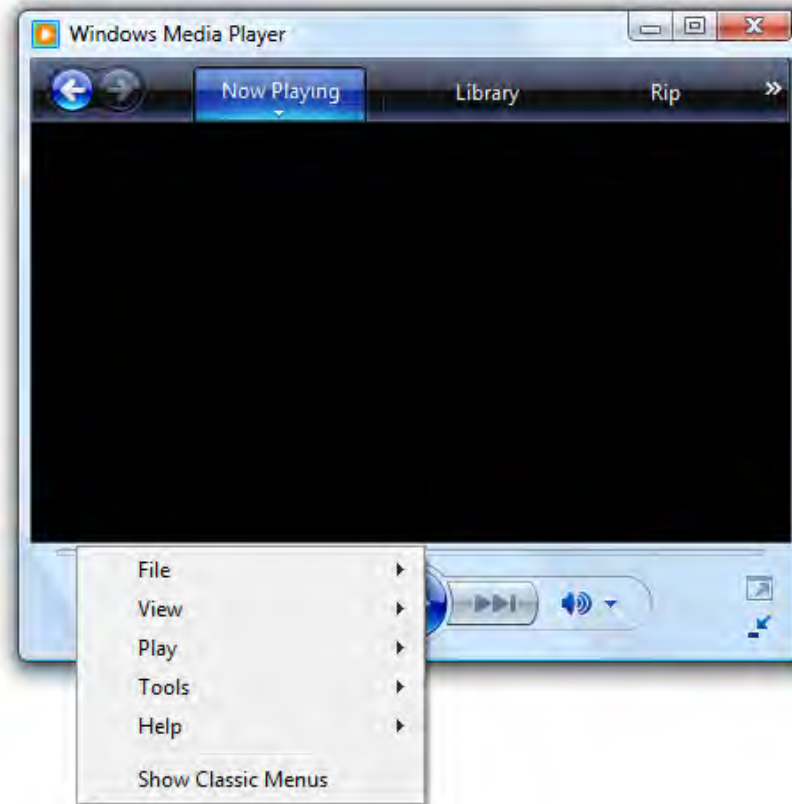

# False Affordances

# Hidden Affordances

When there is no perceptual information suggesting an actual intended use

# Hidden Affordances

# Hidden Affordances

Logos linking to home is a convention, but not afforded by the page

# Confusion of the Term

“Note also that affordances are not intrinsic, but depend on the background and culture of users. Most computer-literate user will click on an icon. This is not because they go around pushing pictures in art galleries, but because they have learned that this is an affordance of such objects in a computer domain...”

Dix

I disagree. Icons do not afford “pushability” or “clickability” by their attributes. They do not give an indication of their intended use, except by convention.

# Clarification on Convention

“Designers sometimes will say that when they put an icon, cursor, or other target on the screen, they have added an ‘affordance’ to the system. This is a misuse of the concept. ... It is wrong to claim that the design of a graphical object on the screen ‘affords clicking.’ ... Yes, the object provides a target and it helps the user know where to click and maybe even what to expect in return, but those aren’t affordances, those are conventions, and feedback, and the like. ... Don’t confuse affordances with conventions.”

Norman

# Metaphors

Suggest an existing mental model

“horseless carriages”, “iron horses”, “wireless”

Desktop metaphor

Not an attempt to simulate a real desktop

Leverages knowledge of files, folders, trash

Explains why some windows seem hidden

# Metaphors

Suggest an existing mental model

“horseless carriages”, “iron horses”, “wireless”

Desktop metaphor

Not an attempt to simulate a real desktop

Leverages knowledge of files, folders, trash

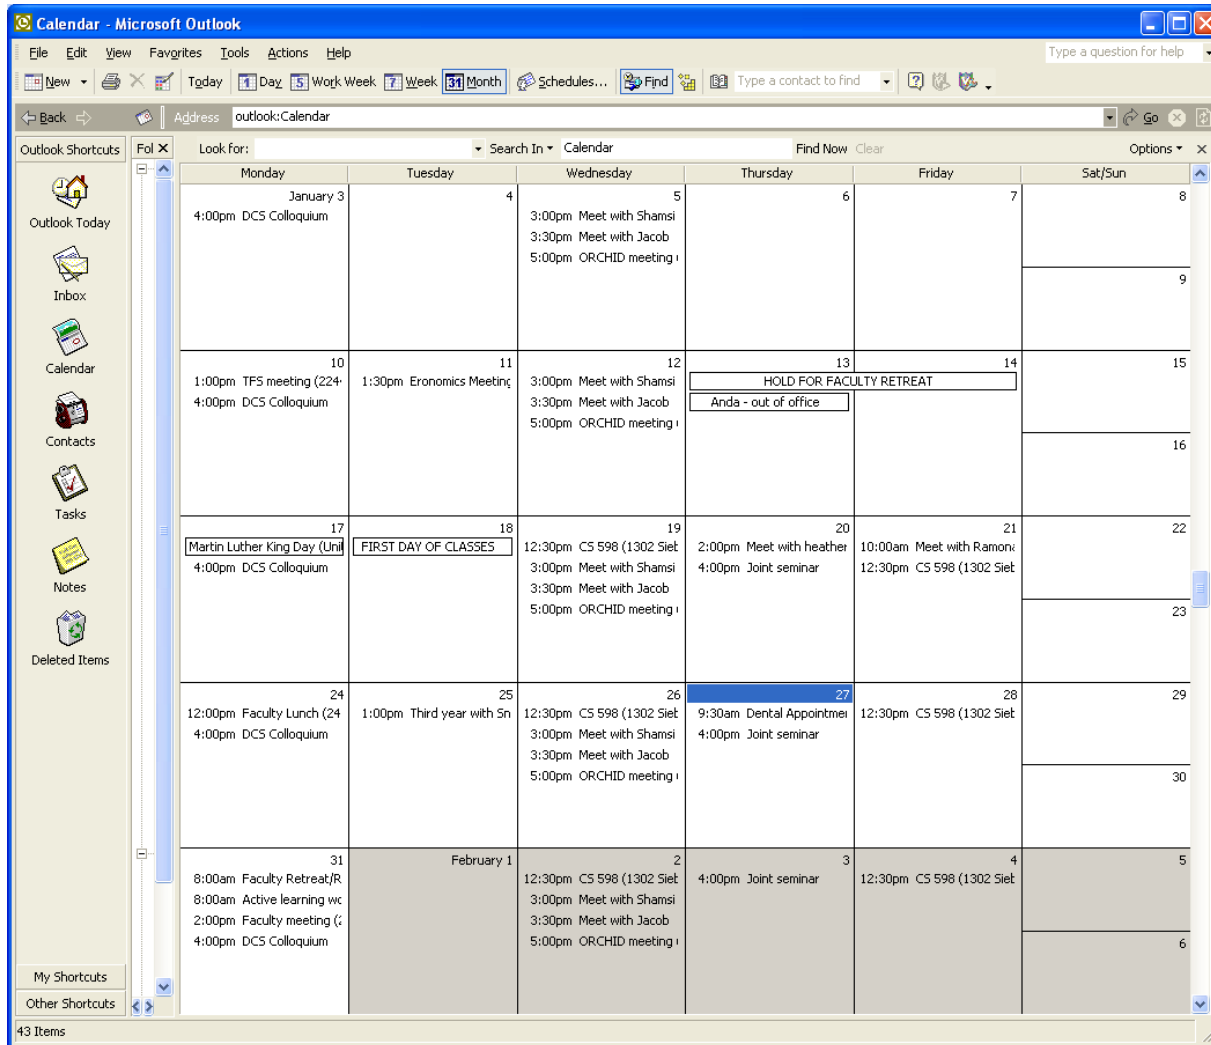

Explains

# Mail Metaphor

# Calendar Metaphor

# Health Metaphor

# Shallow or Inappropriate Metaphors

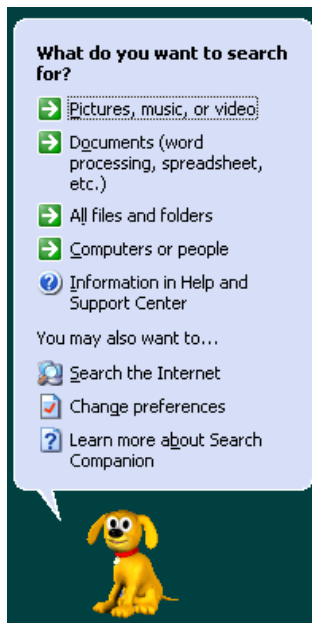

Informs a small range of possibilities, or none at all

Magic Cap

Microsoft Bob

It is just a menu and a dialog box?

What does the living room add?

# Mixed Metaphors

Two or more different metaphors coexist with some supposed relation

The desktop metaphor  
Windows into content

Good? Bad?  
Neither? Both?

Windows are views into larger content regions

No desktop has windows

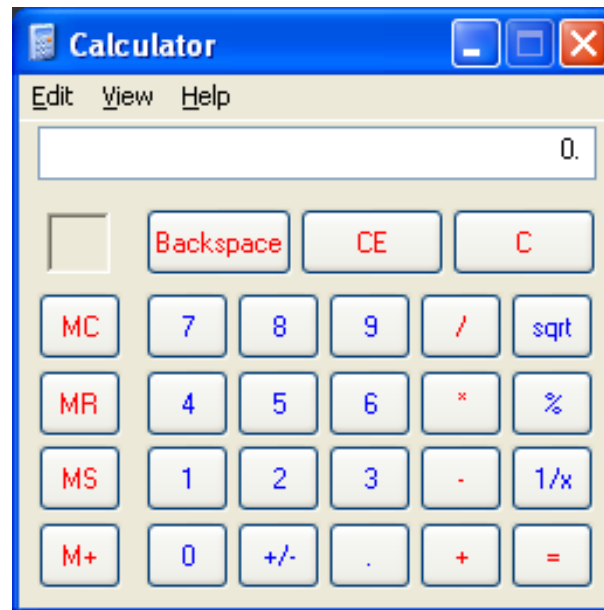

# Broken Metaphors

Are not consistent, do not operate in every circumstance, or do not uphold things consistent with what the metaphor would suggest

# Mechanical-Age Metaphors

Operate as their mechanical-age counterparts did, not taking advantage of the digital domain to escape the limitations of the original

# Dead Metaphors

Lost the original imagery of their meaning

- Milk
- Butter
- Cheese

- 
- Water
  - Beer
  - Wine

# Metaphors versus Idioms

## Idioms

rely on shared experience or custom

are learned, often early in life

are supported or revealed by context

become conventions

do not rely on metaphors

Idiomatic widgets  
(e.g., screen splitter,  
dragable title bar)

Single click to  
select, double  
click to open

Hyperlinks

# Idioms

## Star Trek IV: Scotty Uses a Mouse

# Idioms

## Star Trek IV: Scotty Uses a Mouse

# Metaphors and Affordances

Affordances “jump start” a model for interaction

Metaphors “jump start” a model of a system

But if designed poorly, both can be damaging

- Lead to an incorrect model, undermine interaction

- Can limit designer creativity

- Can reduce the advantages of software

- Can be “cute” at the expense of functional

# Signifiers

“There are trails. There are behaviors. We know how to behave by watching the behavior of others, or if others are not there, by the trails they have left behind.”

“I call any physically perceivable cue a signifier, whether it is incidental or deliberate. A social signifier is one that is either created or interpreted by people or society, signifying social activity or appropriate social behavior.”

“Social signifiers replace affordances, for they are broader and richer, allowing for accidental signifiers as well as deliberate ones, and even for items that signify by their absence, as the lack of crowds on a train platform. The perceivable part of an affordance is a signifier, and if deliberately placed by a designer, it is a social signifier.”

Norman

# Visibility

## Phones

How do you

put somebody on hold

change volume

# Visibility

## Location of Controls

## Display

(This display shows all of the possible configurations.)

0 15-30 During a conversation, the call duration is displayed. (Example: 15 minutes, 30 seconds)

- The unit is in the programming mode (p. 9, 16, 20).
- \* The AUTO button was pressed while dialing or storing phone numbers for the Speed Dialer (p. 16, 19).
- ↵ The LOWER button was pressed (p. 21, 23).
- ⊗ The ringer is set to OFF (p. 10).
- ⊗ The MUTE button was pressed during a conversation (p. 24).
- ⊖ The dial lock mode is set. To cancel the mode, see page 27.
- F The FLASH button was pressed while storing phone numbers.
- P The PAUSE button was pressed while dialing or storing phone numbers.
- ⌂ You pressed [\*] while dialing or storing phone numbers in the TONE mode.
- # You pressed [#] while dialing or storing phone numbers in the TONE mode.
- While storing a phone number in an UPPER memory location for the One-Touch Dialer, "□" will appear when you press a one-touch auto dial button (p. 20).
- While storing a phone number in a LOWER memory location for the One-Touch Dialer, "□" will appear when you press a one-touch auto dial button (p. 21).
- [ - ] The MUTE button was pressed as a secret button while storing phone numbers (p. 18, 22).
- ⌂ While programming function items, such as the dialing mode, "⌂" will flash as a cursor.

# Visibility

## Changing Ringer Volume

Press “Program”

Press “6”

Set Volume

Low - Press “1”

Medium - Press “2”

High - Press “3”

Press “Program”

# Visibility

Controls available on watch with 3 buttons?

Too many and they are not visible

Compare to controls on simple car radio

Number of controls  $\approx$  Number of functions

Controls are labeled and grouped together

# Knowledge in the World

# Constraints

Prevent some actions while allowing others

Original focus on consistency,  
later design for mobile form

# Is Consistency Always Better?

# Is Consistency Always Better?

# Is Consistency Always Better?

# Modes

Modes force people to divide their model

# Active versus Passive Modes

Active modes require constant action to maintain

When that action has ended, so does the mode

e.g., Shift

Passive modes require action to set, and a separate action to unset, or to set again

e.g., CAPS LOCK

Active modes are generally preferred

# Standardization

If all else fails, standardize

Fewer things to memorize

Reduced learning time

Adapt to new situations faster

e.g., keyboard layout not optimal, but standard

# Norman's Seven Principles for Design

Use knowledge in the head and in the world

Simplify the structure of tasks

Making things visible

Get the mappings right

Exploit the power of constraints

Design for error

When all else fails, standardize

**Overview** Agenda

Over the past several decades, computing and information technologies have shaped our lives, our society, and our physical world in ways we never would have imagined. An increasing number of jobs depend on IT, IT shrinks time and distance in our social lives, agriculture and transportation are rapidly becoming IT-based, and IT holds the promise of revolutionizing education and healthcare. Although many of the IT-powered innovations that are reshaping our society can be traced to fundamental computing-related research, their impact has been magnified through powerful applications in areas of broad societal need and opportunity.

Over the past 11 years, the Computing Community Consortium has hosted dozens of research visioning workshops to imagine, discuss, and debate the future of computing and its role in addressing societal needs. The second CCC Computing Research symposium draws these topics into a program designed to illuminate current and future trends in computing and the potential for computing to address national challenges.

The two days are organized around four main themes:

**Intelligent Infrastructure for our Cities and Communities**

- Intelligent infrastructure is already transforming our nation's cities and communities, but the technological revolution is just now beginning. The potential for major improvements in public health and safety, efficient use of our resources, and a higher quality of life for all citizens are enormous. At the same time, new risks arise as we attempt to integrate large scale data collection, advanced cyberphysical systems, and autonomous vehicles into our daily lives. This session will highlight some of the major advances now taking place, while at the same time emphasizing the substantial body of research, much of it crossing disciplinary boundaries, that still needs to be done.

**Security and Privacy for Democracy**

- Computing research enables new technology to help society cope with information security and privacy risks. Learn about how differential privacy will enable new understanding of the population while protecting privacy and about technologies used to help journalists and human rights workers to communicate safely in oppressive regimes.

**AI and Amplifying Human Abilities**

- This panel will examine the emerging role of AI in augmenting human abilities in new and powerful ways. In particular, this session will examine the spectrum of human and machine capabilities and how we develop systems that provide a seamless interface between the two. Speakers will also ground their remarks in application areas ranging from health, transportation, universal access, data analysis, and education.

**Data, Algorithms, and Fairness**

- Data-driven and algorithmic decision making increasingly determine how businesses target advertisements to consumers, how police departments monitor individuals or groups, how banks decide who gets a loan and who does not, how employers hire, how colleges and universities make admissions and financial aid decisions, and much more. As data-driven decisions increasingly affect every corner of our lives, there is an urgent need to ensure they do not become instruments of discrimination, barriers to equality, and threats to social justice.

**Livestream**

# Design Research Review in Critique

In addition to current milestone, bring your design research review to next three critiques

Helpful for “what in you research motivated this”

Helpful for brainstorming other ideas with staff

Look back at design research in defining tasks

For example, tensions you saw in research might suggest different design approaches

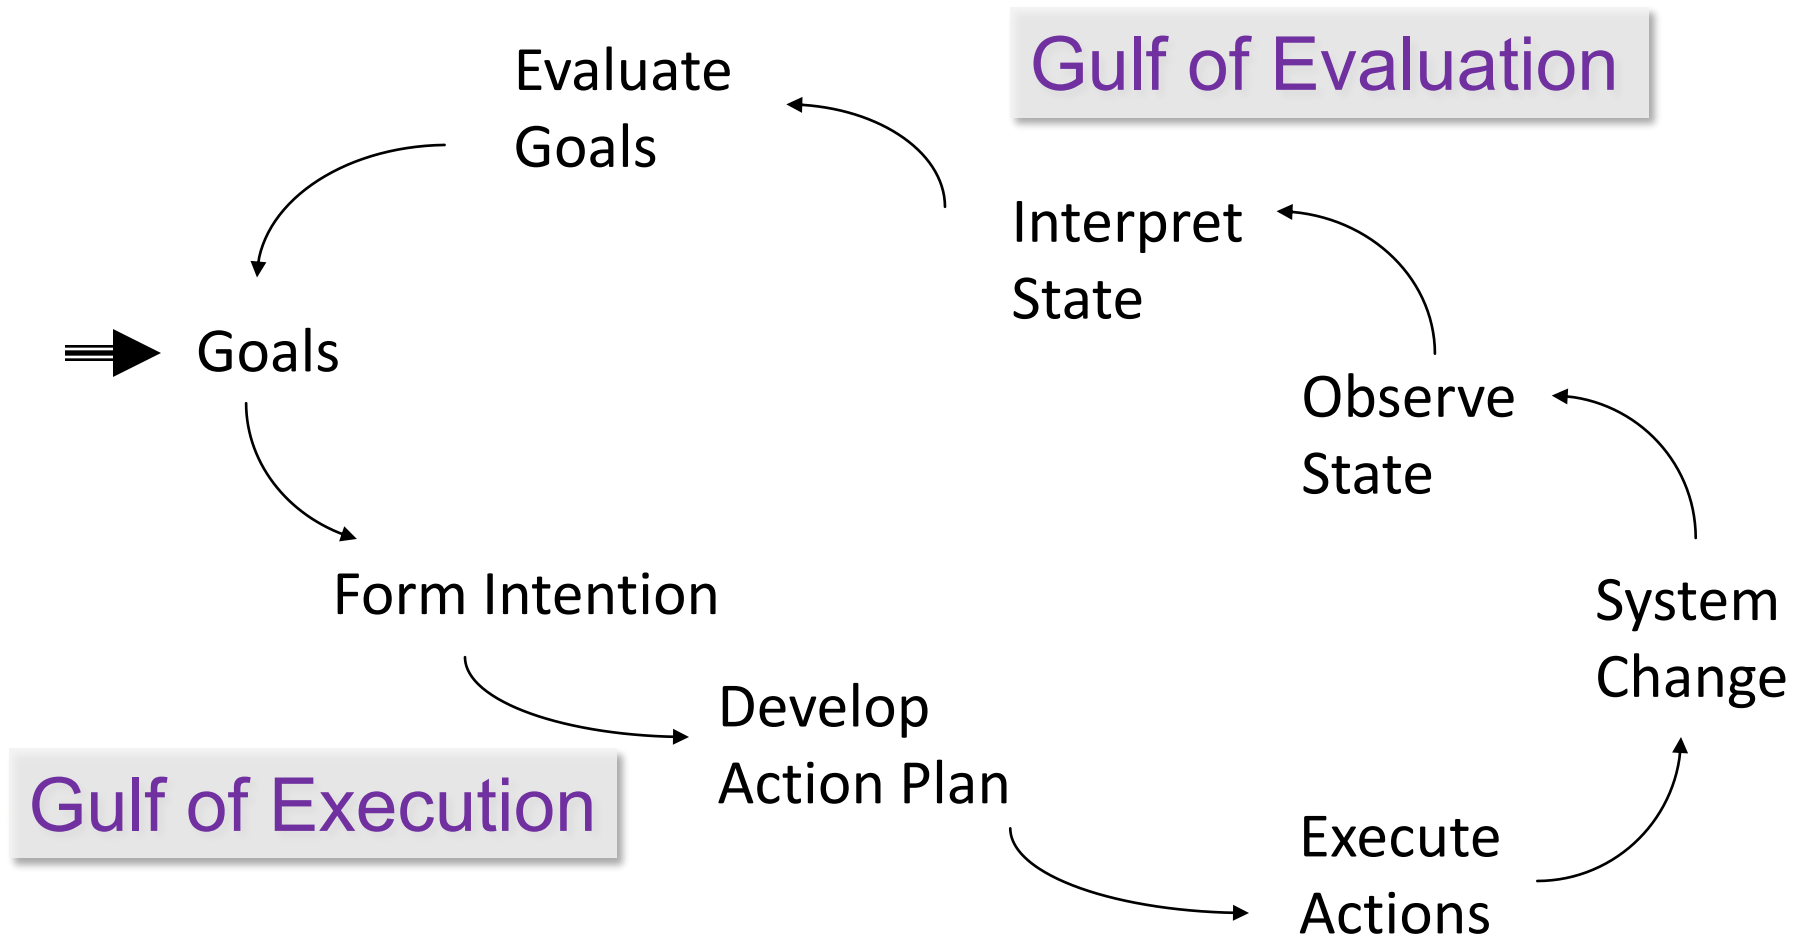

A common task might be found in those approaches, with designs exploring different tradeoffs relative to that tension

# Sketching and Tasks

SCENARIO 1 "I want to listen to alternative music"

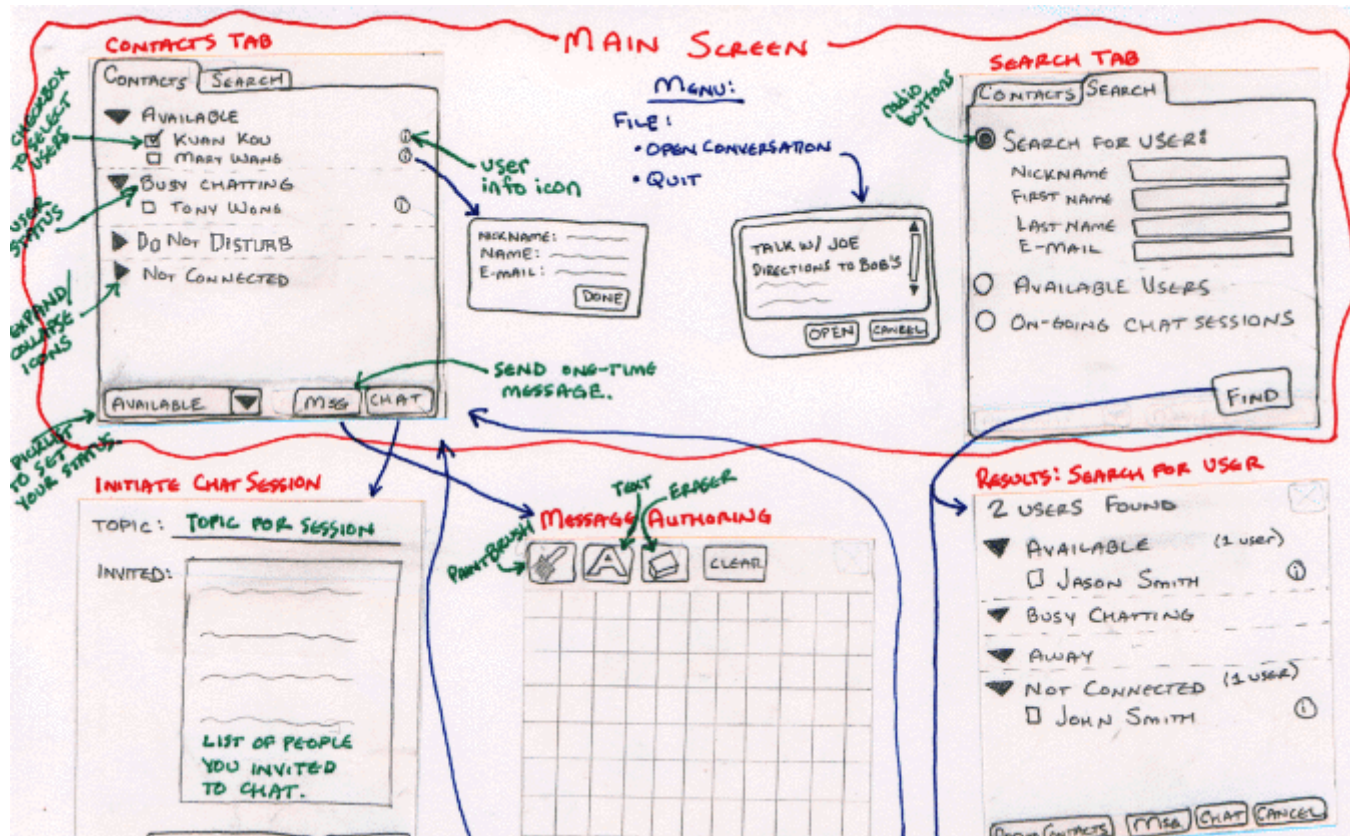

# Sketching and Tasks

# Sketching and Tasks

# Sketching and Tasks

# Illustrating Time

Storyboards come from film and animation

Give a “script” of important events

leave out the details

concentrate on the important interactions

# Storyboards

Can be used to explore

Much faster and less expensive to produce

Can therefore explore more potential approaches

Notes help fill in missing pieces of the proposal

Relative to film, these function as sketches

# Storyboards

Can be used to convey

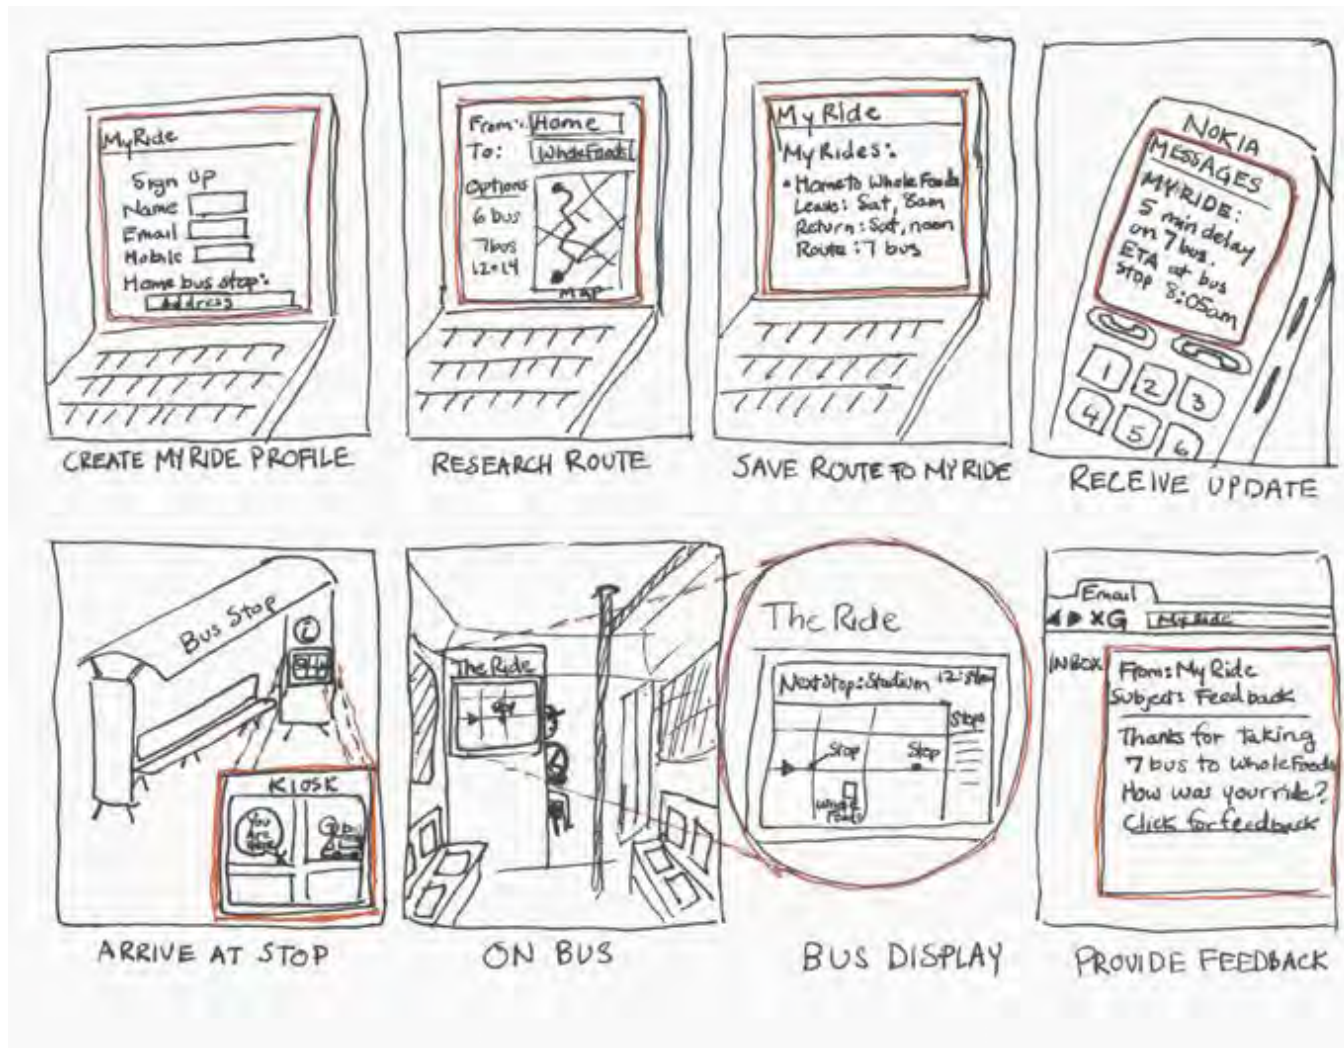

Effective storyboards can quickly convey information that would be difficult to understand in text

Imagine explaining this in text, for various audiences

# Basic Storyboard

# Storytelling

## Stories have an audience

Other designers, clients, potential end-users, stakeholders, managers, funding agencies

Stories need to match audience and purpose

# Potential Purpose of a Story

Purpose allows choosing effective details

## Stories have a purpose

Share information about people, tasks, goals

Giving insight into people who are not like us,  
convey details that might be lost in generalities

Put a human face on analytic data

Spark design concepts and encourage innovation

Share ideas and persuade on potential value

# Stories Provide Context

## Characters

Who is involved

## Setting

Environment

## Sequence

What task is illustrated

What leads a person to use a design

What steps are involved

## Satisfaction

What is the motivation

What is the end result

What need is satisfied

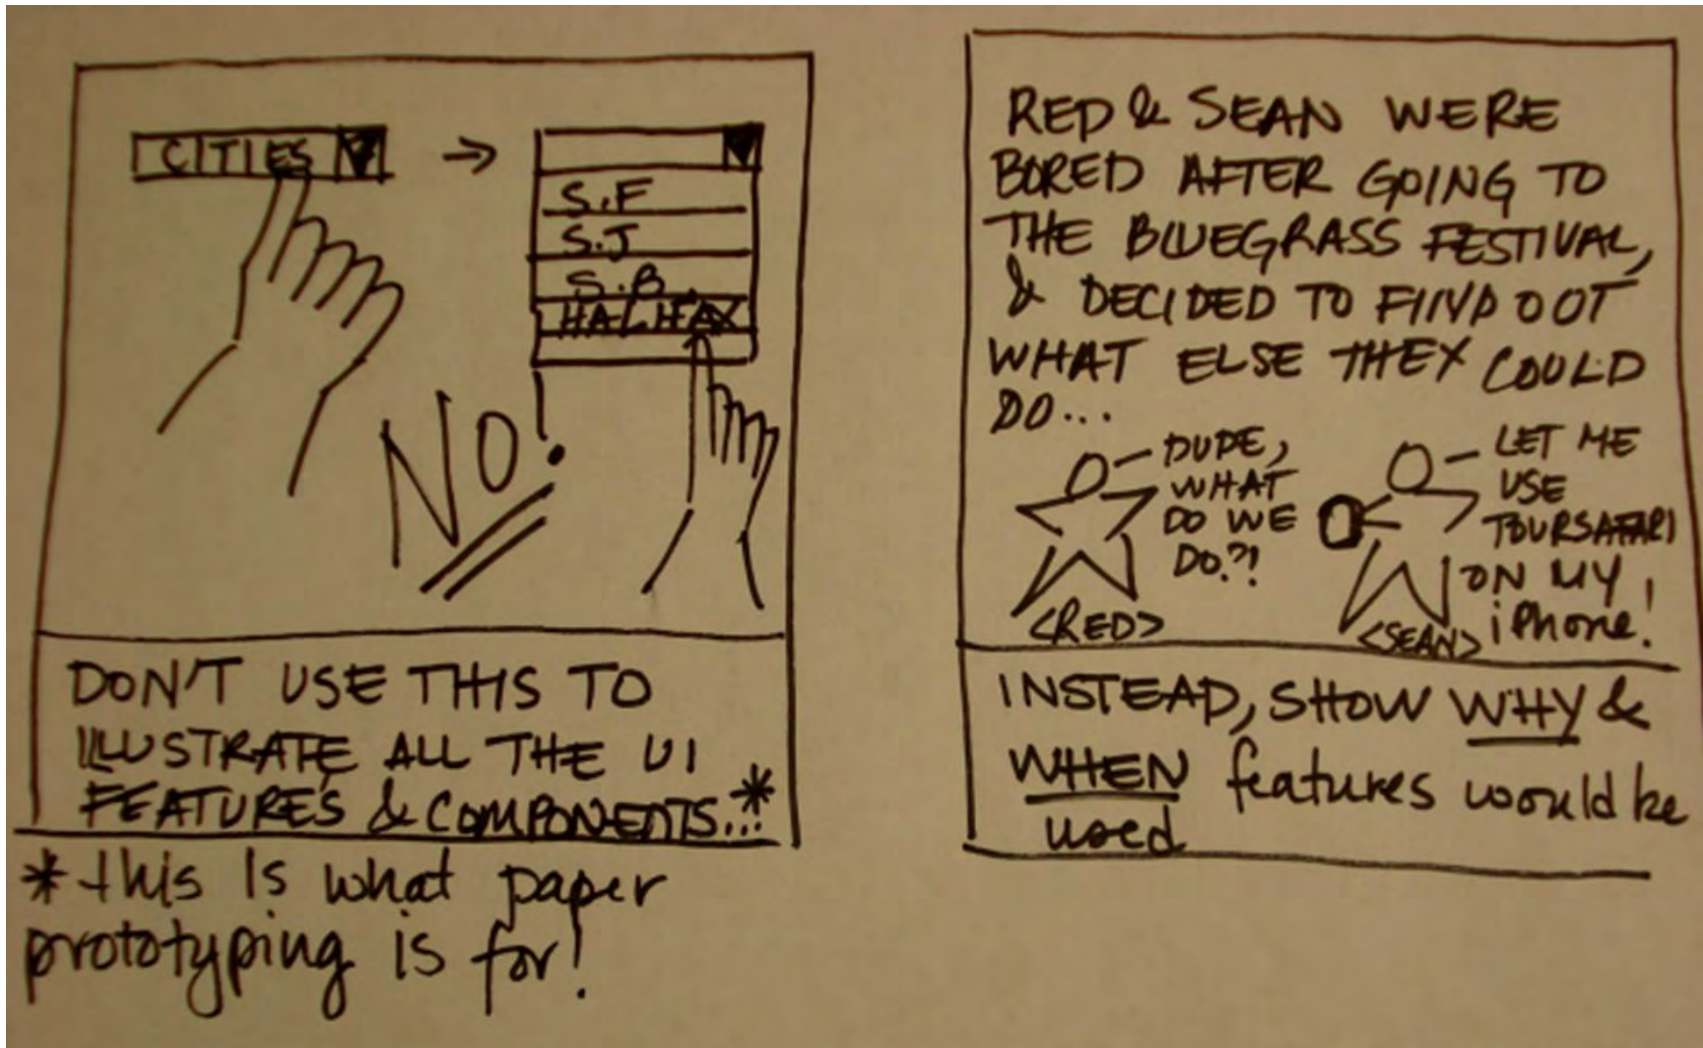

Minor interface features and components are not necessarily surfaced, they can often be developed and conveyed more effectively with other methods

Can help surface details that might otherwise be ignored

Grocery store application:

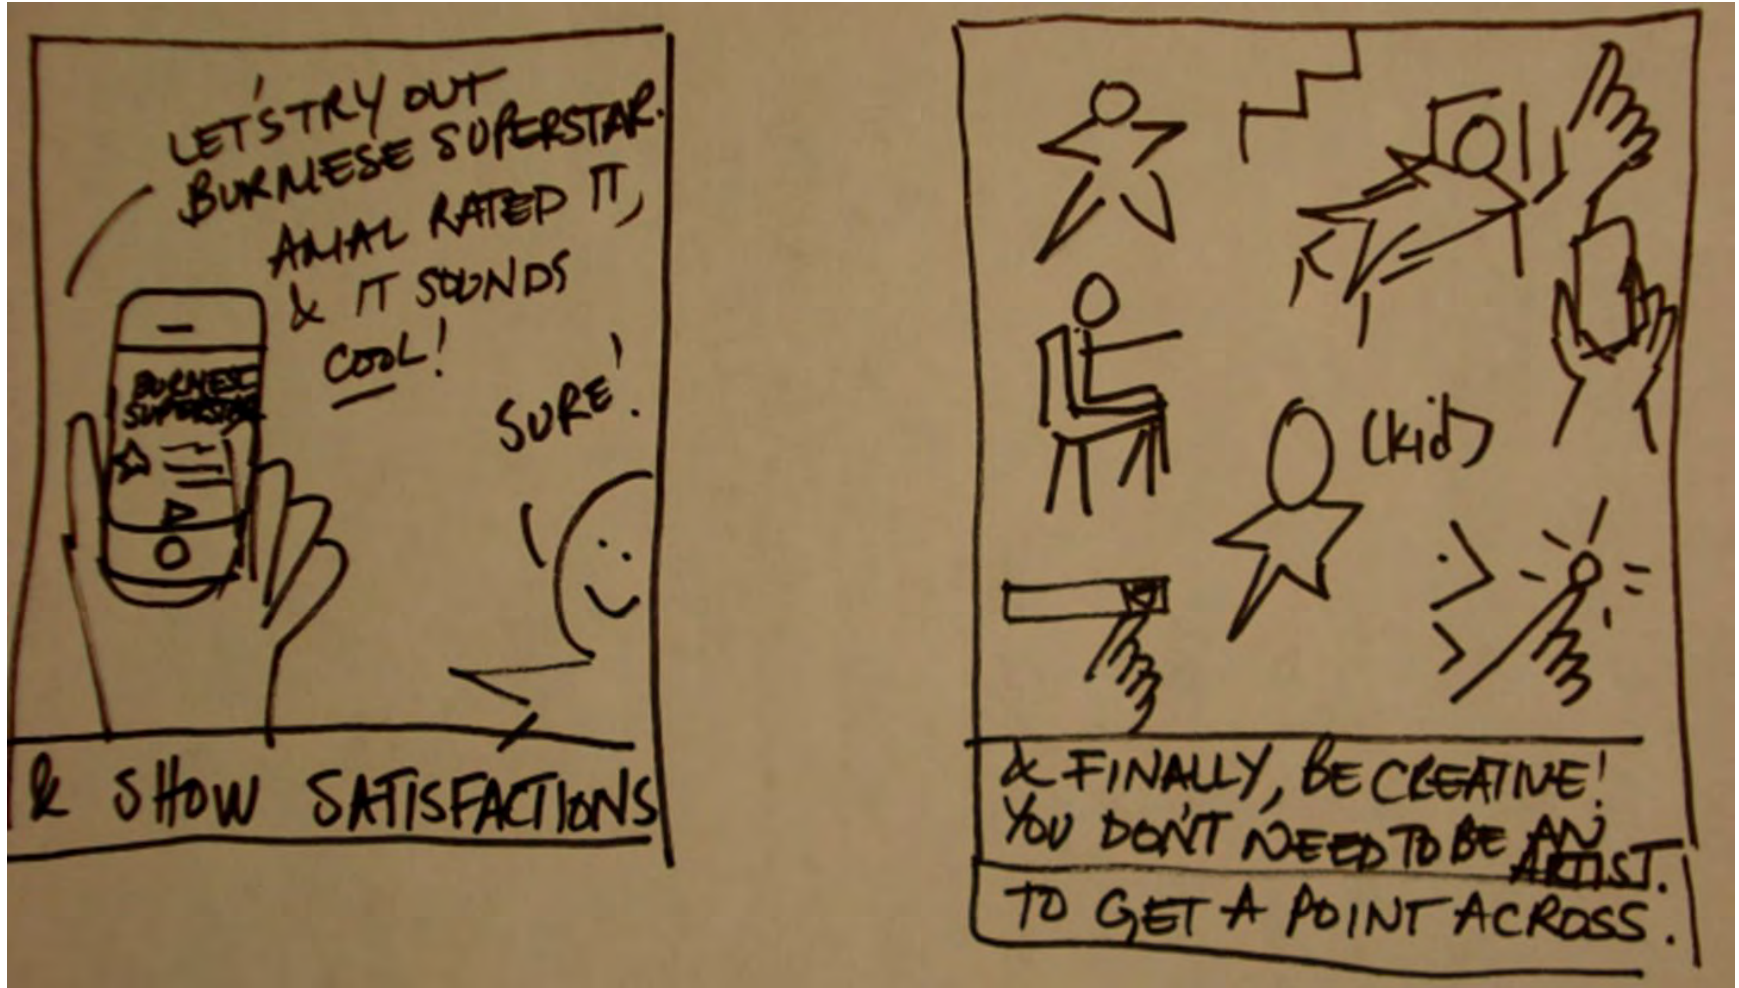

- use with one hand while pushing a shopping cart
- privacy of speech input
- split attention

# Amal's Guide to Storyboarding

# Amal's Guide to Storyboarding

# Storytelling

## Good stories

- Understand audience
- Provide context of use
- Are well-motivated
- Memorable
- Evokes a reaction
- Evokes empathy
- Illustrate experience
- Convey emotions
- Short and to-the-point

## Bad stories

- Do not account for audience
- Boring or un-engaging
- Fantastical or unrealistic
- Wrong story for purpose
- Too long to hold attention
- tl;dr

# Elements of a Storyboard

Visual storytelling

5 visual elements

Level of detail

Inclusion of text

Inclusion of people  
and emotions

Number of frames

Portrayal of time

To better characterize design intuitions:  
gather and analyze artifacts  
semi-structured interviews  
survey focused on identified elements

# 1. How Much Detail?

Guideline: too much detail can lose universality

Scott McCloud

# 1. How Much Detail?

## Sketching People

PERSON

Star people  
by Bill Verplank

(c) 2009 SACHA CHUA

# 1. How Much Detail?

# 1. How Much Detail?

Unnecessary details distract from the story

## 2. Use of Text

Guideline: It is often necessary, but keep it short

## 2. Use of Text

Guideline: It is often necessary, but keep it short

1. At home, Mary checks her blood pressure.

2. After a few simple key presses, her blood pressure readings get sent to a clinic.

3. The information is made available to her doctor.

Short text is more effective, less likely to over-explain

Watch for cases where text induces weird biases

# 3. Include People and Emotions

Guideline: Include people experiencing the design and their reactions to it (good or bad)

Remember, the point of storyboards is to convey the experience of using the system

# 4. How Many Frames?

Guideline: 4-6 frames is ideal for end-users

- Less work to illustrate

- Must be able to succinctly tell story

- Potentially longer for design clients

More is not always better

- May lose focus of story

- May lose attention

# 4. How many frames?

# 4. How many frames?

People found the extra panels were not needed

# 5. Passage of Time

Guideline: Only use if necessary to understand

# 5. Passage of Time

Guideline: Only use if necessary to understand

Inclusion of the clock distracts

# Storyboards for Comparing Ideas

## Authoritative

Cell phone is used to keep track of one's fitness goal.

## Supportive

Cell phone is used to keep track of one's fitness goal.

# Storyboards for Comparing Ideas

## Cooperative

## Competitive

# Storyboards for Comparing Ideas

## Negative Reinforcement

## Positive Reinforcement

# Examples and Tricks in Storyboarding

This is also the focus of Reading 2

Due Saturday night

(not needed for Friday section)

Will go over these quickly, especially the videos

You then view them outside of class

# Drawing is Hard

IT IS SO DARK JANE CAN  
HARDLY READ HER BOOK

SHE GESTURES IN FRONT OF HER  
SPECIAL PENDANT TO TURN ON  
THE LIGHTS

THE LIGHTS TURN ON!

FINALLY, SHE CAN  
READ HAPPILY.

Will a picture work instead?

# Existing Images from Other Sources

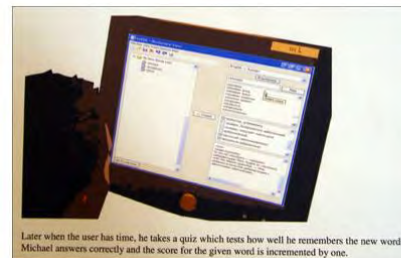

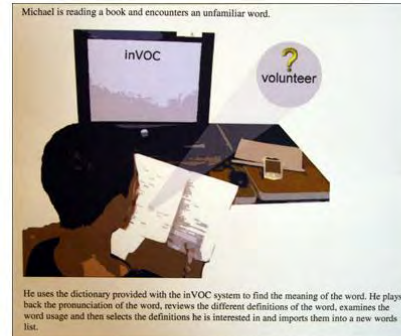

<http://designcomics.org/>

<http://www.pdclipart.org/>

# Blur Out Distracting Details

Using image editing software to simplify photos into sketches

# Tracing Photos

# Comic Presentation

Thought bubbles argue for the design

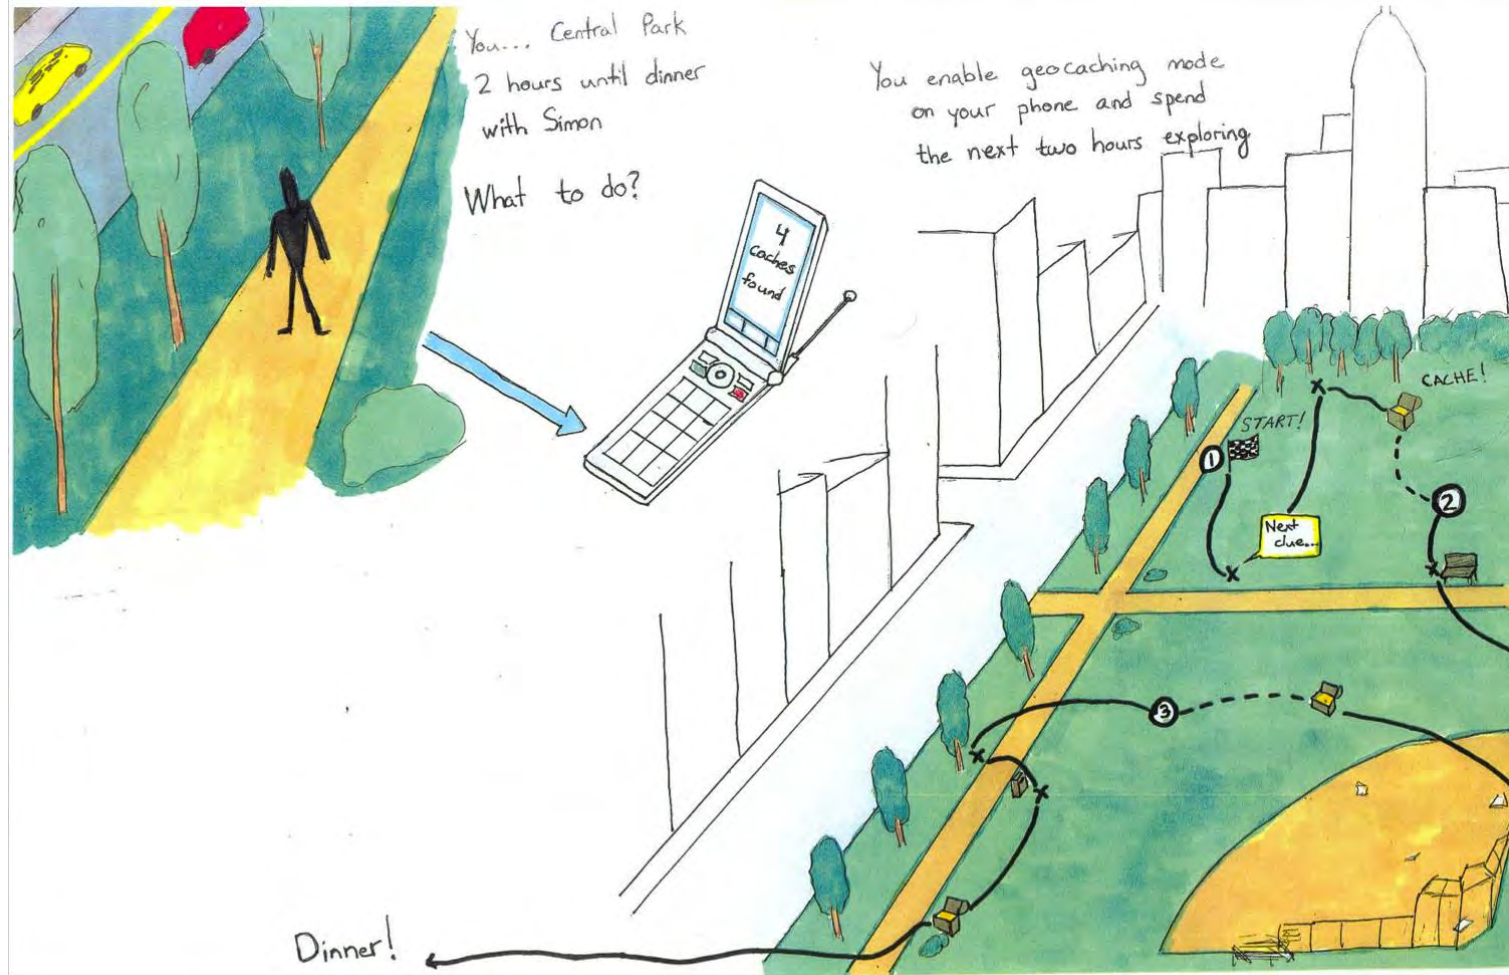

# Selective Use of Color

# Route Maps

# Route Maps

# Route Maps

# Route Maps

the movie is over and  
you are hungry, but you  
don't know the area...

you check your phone for  
a list of places people often  
go from here...

and discuss the  
food options with  
your friends...

... eventually settling on  
a diner and getting directions  
through your phone.

SM  
10/11/200

# Mapping the Space of Interaction

# Value of Animation or Video

Can illustrate critical timing

Can be more engaging than written or storyboard

Can help convey emotion (e.g., voice, music)

Can show interactive elements more clearly

Can be self-explanatory

If done well, can be an effective pitch

But you need to keep it quick and effective

# Most Important Trick: Stop Motion

<http://courses.cs.washington.edu/courses/cse440/videos/videoprototyping/Mackay-StopAction.mp4>

# Most Important Trick: Stop Motion

<http://courses.cs.washington.edu/courses/cse440/videos/videoprototyping/Mackay-StopActionResult.mp4>

# Video Prototypes

May build upon paper prototypes, existing software, and images of real settings

## Narration optional

Narrator explains,  
actors move or illustrate interaction

Actors perform movements and viewer  
expected to understand without voice-over

# Steps to Create a Video Prototype

Review field data

Review ideas from brainstorm

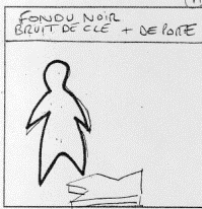

Create text for usage scenarios

Develop storyboard, with each scene on a card, illustrating each action/event with annotations explaining what is happening

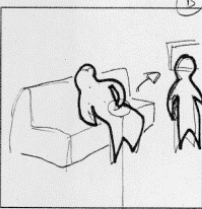

# Steps to Create a Video Prototype

# Steps to Create a Video Prototype

Shoot a video clip for each storyboard card

Avoid editing in the camera, just shoot scenes

Use titles to separate clips

Like a silent movie

Digital changes these tradeoffs, but respect the spirit of doing this quickly to get point across

If you make an error, just reshoot it

# Prototyping Microsoft Surface

<http://courses.cs.washington.edu/courses/cse440/videos/videoprototyping/Surface-Document-Interaction.mp4>

# Prototyping Microsoft Surface

<http://courses.cs.washington.edu/courses/cse440/videos/videoprototyping/Surface-Context-Lens.mp4>

# Lessons from Prior Video Prototypes

Narration, Pace, and Flair

Three versions of “Don’t Forget”

Using Projectors and Simple Props

“Buddy Map”

Watch for Pace and Scene Relevance

“Consumester”

# Narration, Pace, and Flair

**Don't Forget**  
by **Carolyn Holmes and Fred Potter**

<http://courses.cs.washington.edu/courses/cse440/videos/videoprototyping/Don't-Forget-1.mp4>

# Narration, Pace, and Flair

<http://courses.cs.washington.edu/courses/cse440/videos/videoprototyping/Don't-Forget-2.mp4>

# Narration, Pace, and Flair

**"Don't Forget" Video Prototype**  
**Chris Govella - Peter Woodman**

<http://courses.cs.washington.edu/courses/cse440/videos/videoprototyping/Don't-Forget-3.mp4>

# Using Projectors and Simple Props

**Team Buddy Map**

**Backcountry Savior**

Craig Panthen : Philip Kuo : Heidi Tanamulia : Christopher White  
CSE 440F : Professor Landay

<http://courses.cs.washington.edu/courses/cse440/videos/videoprototyping/Buddy-Map-Backcountry.mp4>

# Watch for Pace and Scene Relevance

**Consumester**  
Video Prototype

<http://courses.cs.washington.edu/courses/cse440/videos/videoprototyping/Consumester.mp4>

# Lessons from Prior Video Prototypes

Split Presentation, Simple Effects

“PickUp”

Still-Frame, More Effects

“Graffiti Karma”

# Split Presentation, Simple Effects

Daniel Swisher  
Ian Crofoot

Mitchell Ishimitsu  
Sunil Garg

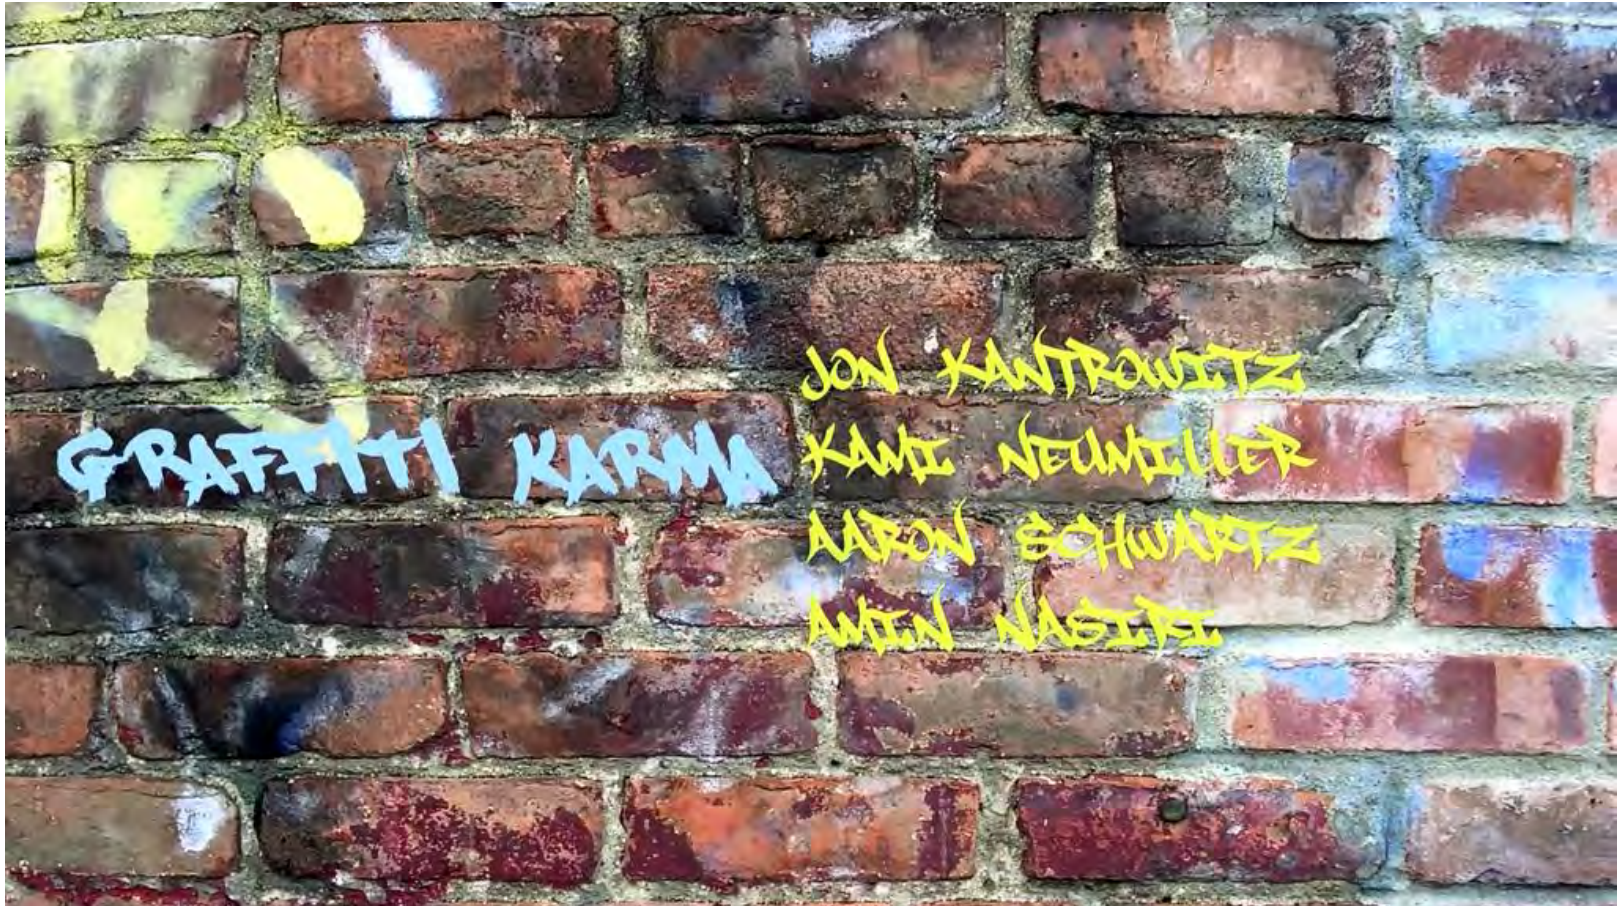

**PickUp**  
It's more than a game it's a community

CSE 440 Video Prototype

<http://courses.cs.washington.edu/courses/cse440/videos/videoprototyping/Pickup.mp4>

# Still-Frame, More Effects

<http://courses.cs.washington.edu/courses/cse440/videos/videoprototyping/Graffiti.mp4>

# Lessons from Prior Video Prototypes

Scenario with a Contrast

“ParkSmart” (note that screens are static images)

Playful while Keeping Pace

“Plantr”

# Scenario with a Contrast

<http://courses.cs.washington.edu/courses/cse440/videos/videoprototyping/Parksmart.mp4>

But watch for pace and scene relevance

ParkSmart

# Playful while Keeping Pace

<http://courses.cs.washington.edu/courses/cse440/videos/videoprototyping/Plantr.mp4>

# Reminder on Fidelity

FLUIDUM

FLUIDUM

<http://courses.cs.washington.edu/courses/cse440/videos/videoprototyping/Mug-Sketch.mp4>  
<http://courses.cs.washington.edu/courses/cse440/videos/videoprototyping/Mug-HiFi.mp4>

# Fidelity Takes Time: Stay Low Fidelity

Completely made-up bar length

But it is probably at least this bad

If you need a video,  
do you really need footage?

If you need an animation,  
do you really need Flash?

If you need a photo,  
do you really need to shoot?

# Range of Purposes

## Illustrating Low-Level Techniques

Microsoft Surface examples convey timing

## Illustrate Designs in Context, Convey Satisfaction

Focus in this course

# Finding

- **Reimbursement is a burden...**
  - More people, more difficult
- **Compiling shopping list**
  - mental note, notepad, or phone
- **Brand and price conscious**

# Task

Typography  
Consistency

- 1. Making list & budgeting**
- 2. Choosing a store & transportation**
- 3. Shopping**
- 4. Purchasing**
- 5. Storing groceries**
- 6. Managing \$\$\$ & requesting reimbursement**

# Summary

Widows  
Orphans  
Process vs. Results

- Iteration is key
- Understand how users think
- Better design ideas came from more out-of-the-box thinking
- Discretionary spending is easy but discretionary spending tracking is hard
- Users crave positive motivation

## Things to Do (Tasks)

1. Ability to record running statistics such as distance run, speed, number of runs, etc.
2. Share statistics with friends
3. Create running events and invite friends
4. Send mass notifications to friends for a spontaneous run
5. Find a SmartMatch (based on various criteria) to run with
6. Write and search for reviews on the route/experience

## Overall Problem: Joint Pain & Activity

- **Target Audience: Athletes**
  - Health conscious
  - Disciplined
- **Problem: Overexertion and aggravation of injury among athletes**

# Running with Friends

Erica Putsche, Heidi So, Luke  
Chang, Linsen Wu

# Contextual Inquiry - Insights

**Johnson** (20, undergraduate, CSE 006 Lab)

- Perception ≠ Observation
- Distracted by people talking and noise
- More focused at CSE Labs than at home

**Steve** (25, graduate, Mercer Court)

- Motivated by seeing people working
- Distracted by people and social media
- Takes breaks often

**George** (25, graduate, Odegaard Library)

- Turns notifications off while studying

**Group** (4 undergraduates, Yunnie Bubble Tea)

- Distracted by each other and apps
- Use headphones (music) to focus

Distraction Sources

## Our three inquiries showed us:

1. People valued the insights acquired from a mood journal.
2. People thought journaling was a hassle.
3. People were interested in what triggers their mood
4. People want to share information with a mental health professional

Design 1: Running separately

May add some motivation but does not provide the full experience of running with a companion

Design 2: Coordinating running events in advance

Tasks can be accomplished using Facebook events or other similar tools

**Design 3: Spontaneous Running**

**Tasks are unique and they also address the concerns raised in our contextual inquiries. Our chosen design also provides us with an interesting opportunity to explore personal informatics**

# Summary

Too Much Text  
“Process” Points Distract

- Iteration is key
- Understand how users think
- Better design ideas came from more out-of-the-box thinking
- Discretionary spending is easy but discretionary spending tracking is hard
- Users crave positive motivation

# Having Too Much Text

If you can read it

you probably will

we probably will

Be conversational, engaged

even when not talking

Notes are fine

but do not read them

placeholders

# Parent Contextual Inquiry

## Participants:

- Two parents whose children formerly had IEPs
- One parent with two children that currently have IEPs
- One guardian of a student with an IEP

## The Process:

- “The lingo and paperwork are confusing, they come with 17 people and you are there by yourself.”

## Communication:

- “right now I come in doing all the communications to get information”

## Tracking

## Overall Problem: Joint Pain & Activity

- **Target Audience: Athletes**
  - Health conscious
  - Disciplined
- **Problem: Overexertion and aggravation of injury among athletes**

# Contextual Inquiry

- Dancers
  - Use of entire body
  - Diverse Injuries
- Observation
  - Warmup
  - Preventative Habits

Pictures  
are Good

# Contextual Inquiry

## 4 Locations

- Odegaard Library
- CSE Undergraduate Labs
- Mercer Court
- Yunnie Bubble Tea (Ave)

## 3+1 Approaches

- Observation + Interview (3x)
- Interview-only (2x)
- In-group Interview (1x4)
- + Online Survey (16x)

# Contextual Inquiry

Pictures  
are Good

- People do not want to be interrupted or distracted
- Most people do not have a liquid intake plan
- People often reach for soda, coffee, or other beverages when they feel thirsty

Pictures  
are Good

# Contextual Inquiry

Professional  
(20-40s)

Family

Undergrad  
Student

## In-Line References Versus Bibliography Slide

**15%** of Americans between the ages of 20 and 69 experience hearing loss that may have been caused by **noise at work or during leisure activities.**

## Motivation of Participants

**Very noisy** work environment

**Some control** over exposure levels

**Moderately noisy** work environment

**Lacks control** of his noise exposure

Dartmouth student who is exposed to **noisy social environments** multiple days per week

**Has control** over exposure levels

Focus on the  
Right Thing

# Contextual Inquiries

Suzzallo Library

Husky Union Building

Paccar Hall

One person still uses food journaling consistently and has a positive experience.  
One person stopped food journaling because she reached her goal and had a nutritionist.  
The third person loves taking pictures of her food and just seeing what she's been eating.  
Had them take us through their process during mealtime, motivations, difficult, benefits

Watch the  
Selling

We can help

# Tasks

- Record mood reflections
- Discover triggers and warning signs
- Discover wellness strategies
- Planning for health
- Quick mood check-ins
- Aid your health professional

# Tasks

1

Engage a  
work session.

2

Record digital and  
non-digital behavior.

3

Prompt for  
taking breaks.

4

Reflect on recorded  
data relative to  
time and location.

5

Find a productive  
work place.

6

Find and implement  
methods/strategies to  
stay focused.

# Tasks

# Speaking of Distractions

Whether correct or not, many things distract

Plural possessive

*a posteriori*

Anything else that might be distracting

Too hilarious

Too close to being inappropriate

# Original Tasks

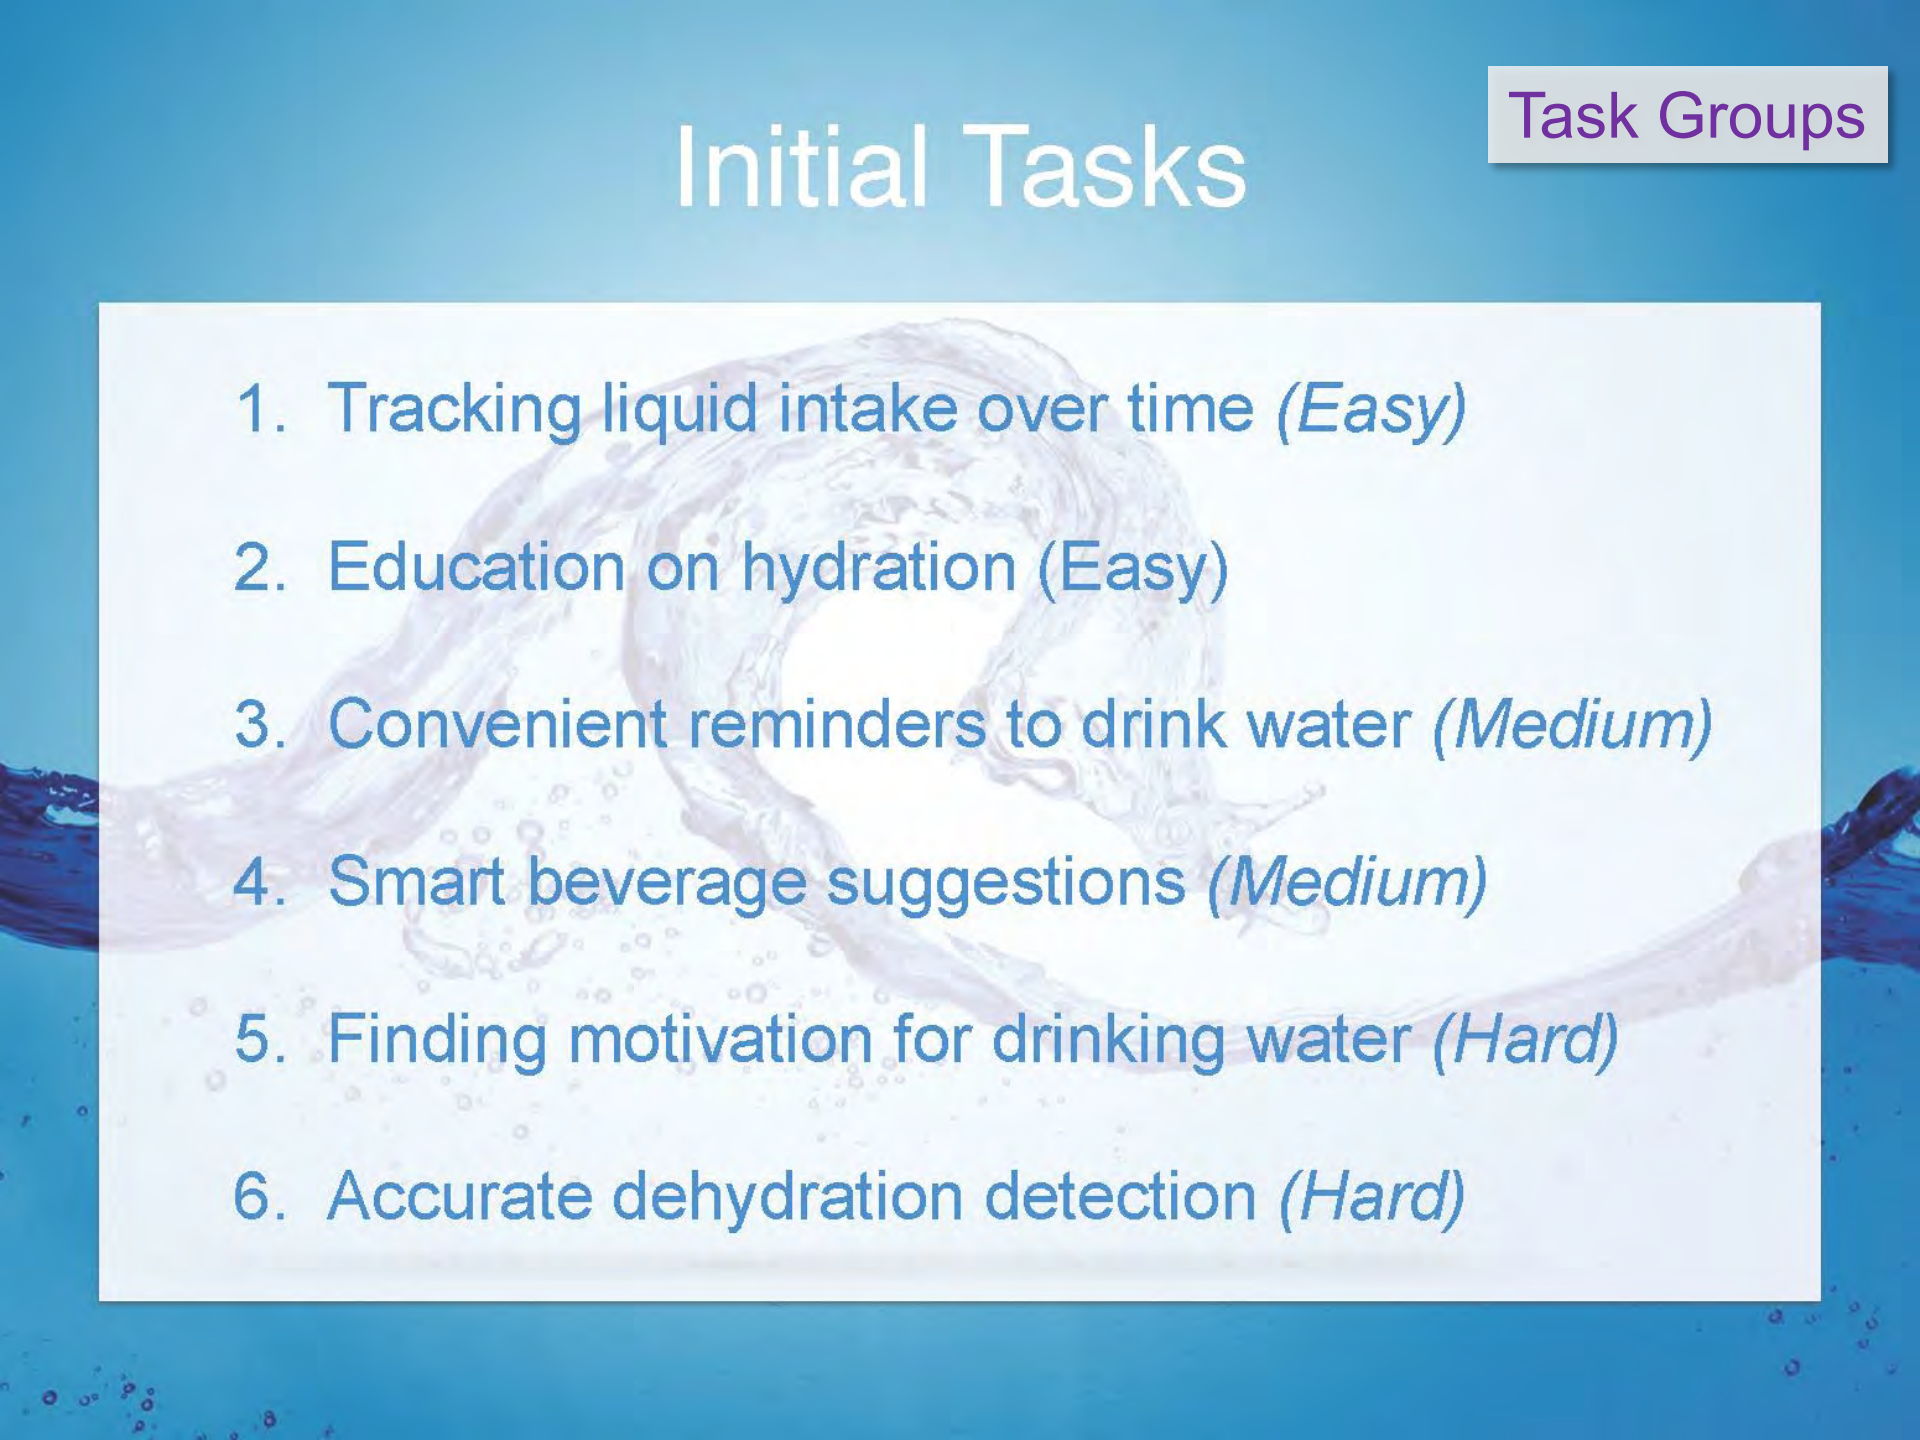

### **Current Tasks:**

- Aggregate and collect all IEP information for continuity and stakeholder accessibility.
- Encourage communication between stakeholders.
- Connect with other parents who have children with similar disabilities.

### **New Tasks:**

- Access mini lessons to support the developmental master of IEP tasks.
- Motivational rewards system to encourage students to be active in their IEP.
- IEP videos for parents to understand how to best advocate for their child.

# Initial Tasks

- 
- A dynamic splash of water in shades of blue and white, with many small droplets and bubbles, serves as the background for the slide.
1. Tracking liquid intake over time (*Easy*)
  2. Education on hydration (*Easy*)
  3. Convenient reminders to drink water (*Medium*)
  4. Smart beverage suggestions (*Medium*)
  5. Finding motivation for drinking water (*Hard*)
  6. Accurate dehydration detection (*Hard*)

**Adjust** budget between different categories.

**Designate** spending as discretionary.

# Verb as Task

Review spending **progress** compared to goals.

Account for **future** spending.

Prevent **unwanted** habitual spending.

Check if a potential purchase **fits the budget**.

Consistency  
of Emphasis

Many people make **general**  
budgeting goals.

**Large** items are monitored.

Small items cumulative impact  
**not considered.**

**Challenging** setting up budgets.

Complicated input leads to **less use.**

# Task: Reflect on recorded data relative to time and location

Task: Find and implement methods/strategies  
to reduce distractions and increase focus

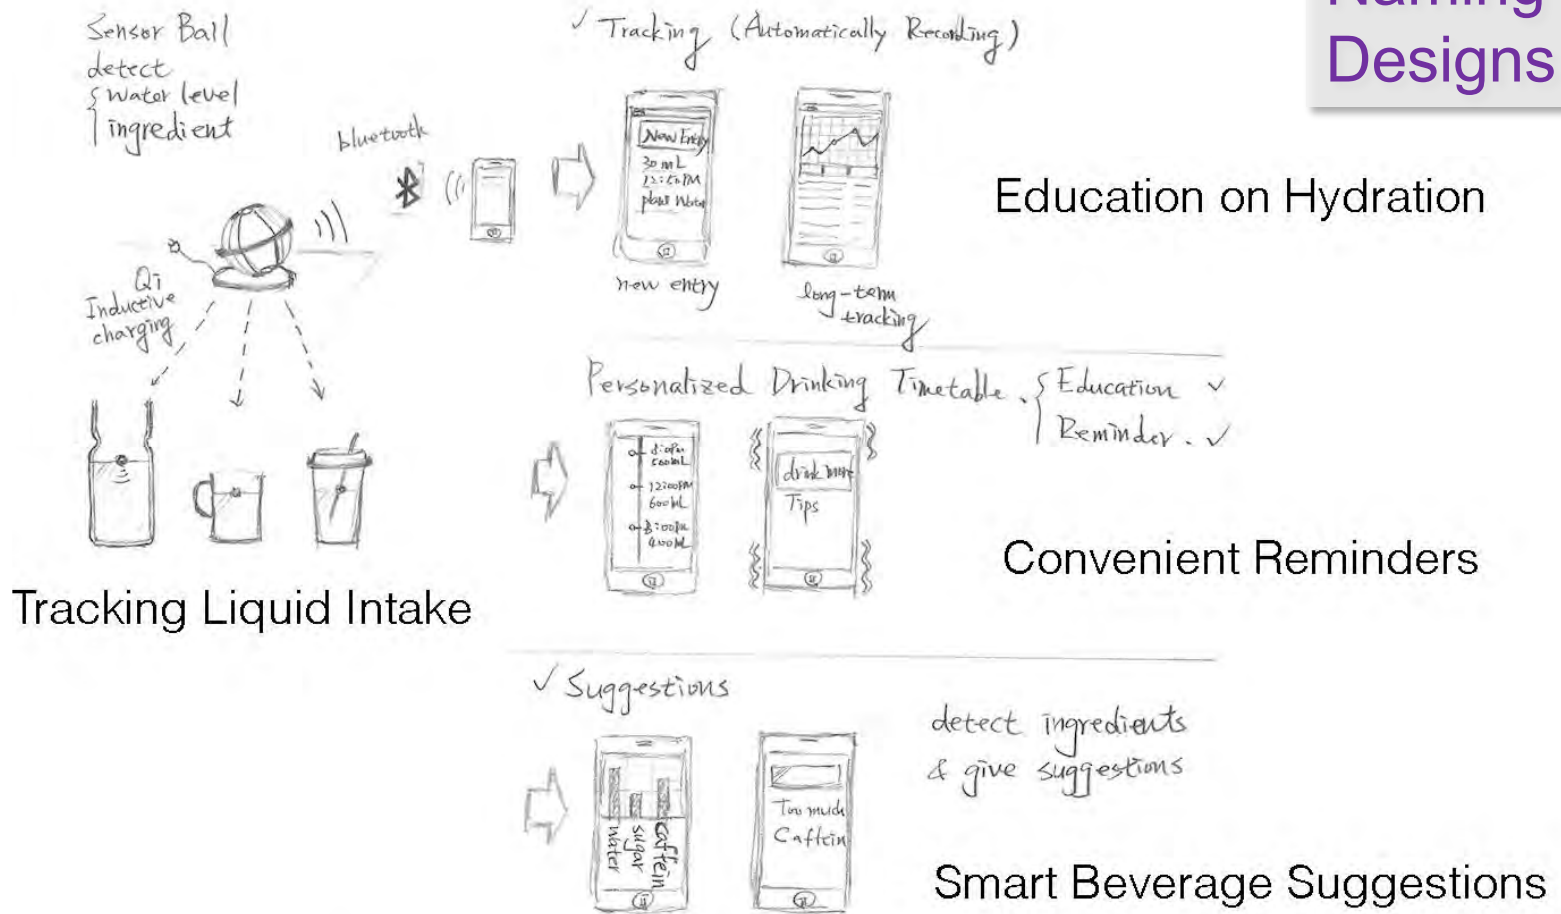

# Design 1

## Naming Designs

### Pre-shopping

# Naming Designs

## Design 1

Sensor Ball with Mobile App

# Naming Designs versus Slide Title Hierarchy of Information

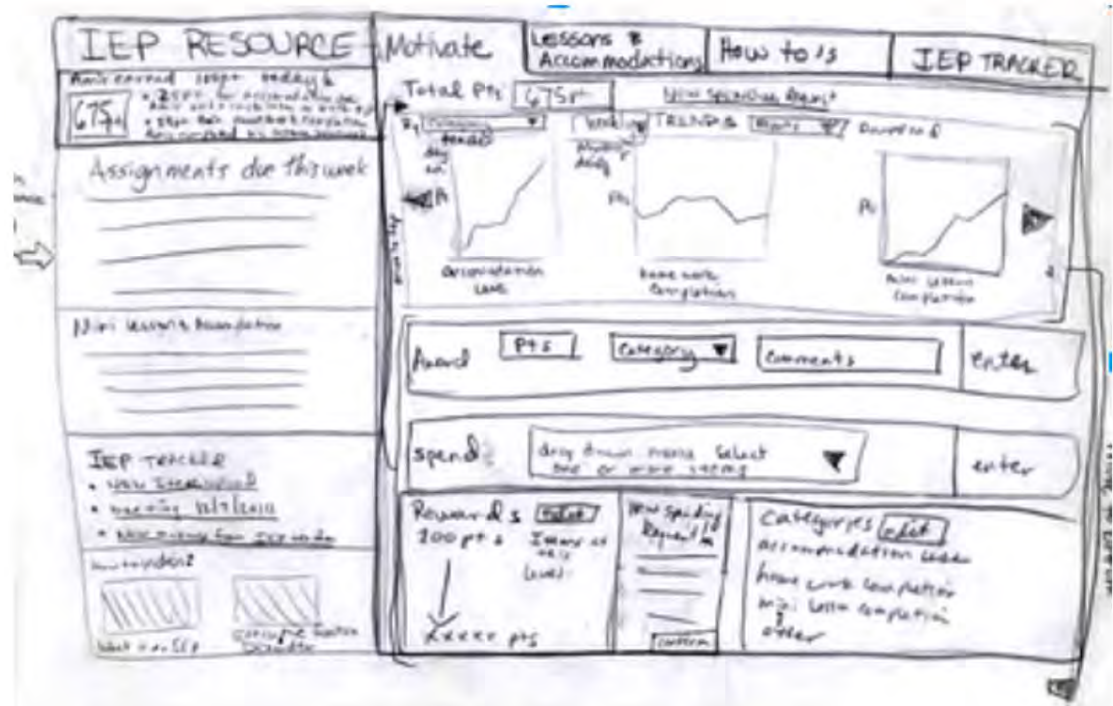

## Sketch 3

Main Focus:

- Student Motivation

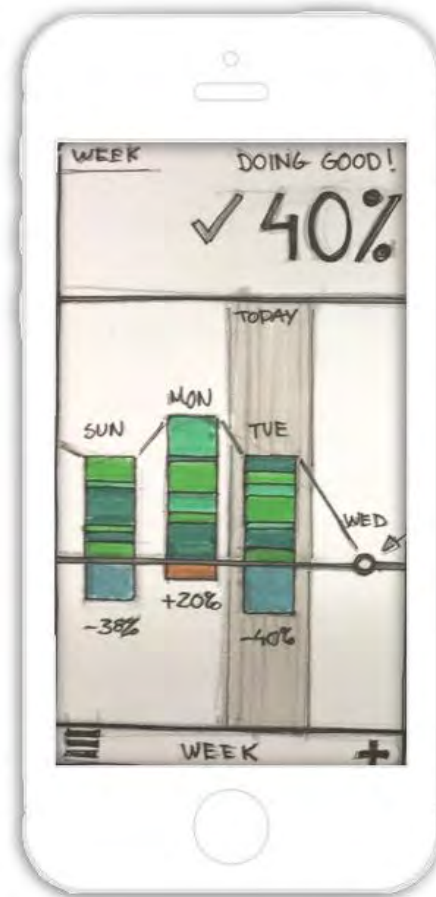

Key Features:

- Mini lessons accessible for the student and parent to work on
- Points awarded for completion of task on the website
- Spending points for various rewards

# Design 1

Legibility  
of Sketches

Design 3

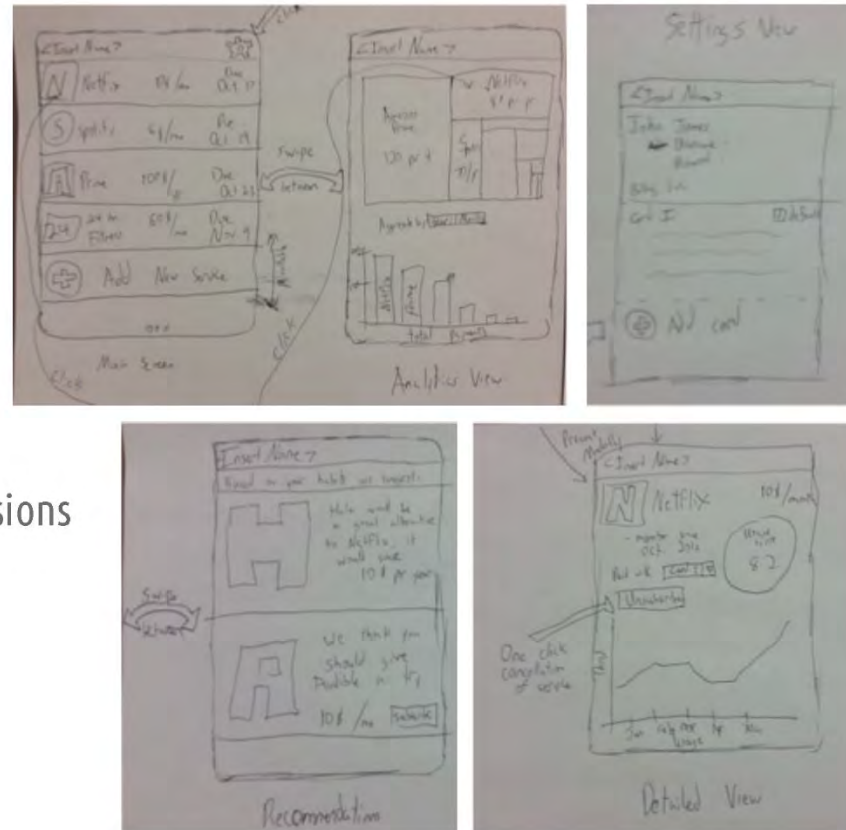

# Low Contrast Images Low Contrast Text

## Updated Sketch

### Two Tasks

- Recurring subscription management
- Insight and informed decisions

# Tasks

Distracting  
Background

## Categorize Time Spent

What qualifies as work or play?

## Set Goals For Each Category

How much time should you spend on each activity?

## Share Schedule and Free Time

Who should be notified?  
Who is free right now?

## Decide What To Do While Waiting

What can get accomplished within that time?

## Adapt Correctly To Schedule Changes

What can be pushed back and what has a solid deadline?

## Get Reminders for Flexible Tasks

When is the best time for lunch?

# Storyboards

Star People!  
Hard to Follow  
on a Single Slide

# Selected Design

- Simplest overall design of the three
- Most aesthetically pleasing due to effective organization and spacing
- Easy way to set goals without any outside pressure on what you choose
- Firmly addresses the most important user need of tracking overall usage

## Storyboard 2:

1. David likes the new song released recently, so he shares it on the SR app

2. When he posts it, he adds tags and defines the group of people he wants it to be seen

3. Daniel then gets a message showing that David likes the music

4. Daniel then messages David about his idea of the song

# Today

Tips for Effective Presentations

Paper Prototyping

Testing

Ethics in Testing

Tasks in Testing

# Objectives

Be able to:

In the language of sketching and prototyping, describe the purpose paper prototyping and the broader goal of low-fidelity prototyping

Describe stages of a usability test, discuss strategies and potential pitfalls in each stage

# Is My Design Good?

This is not a meaningful question

It can and will be answered with “Yes”

At least consider asking:

“What are three good things about this design?”

“What are three bad things about this design?”

But really the answer is “it depends”

Remember that designs are used for tasks

We should ask this in the context of tasks

# Fidelity in Prototyping

## High Fidelity

Prototypes look like the final product

## Low Fidelity

Designer sketches with many details missing

We have discussed the value of staying lightweight in sketching, but this also applies to prototyping

# High-Fidelity Prototypes Warp

## Time and creativity

- Require precision (e.g., must choose a font)

- Specifying details takes time

- Can lose track of the big picture

## Perceptions of a person reviewing or testing

- Representation communicates “finished”

- Comments often focus on color, fonts, alignment

# Low-Fidelity Prototypes

Traditional methods take too long

Sketches → Prototype → Evaluate → Iterate

Instead simulate the prototype

Sketches → Evaluate → Iterate

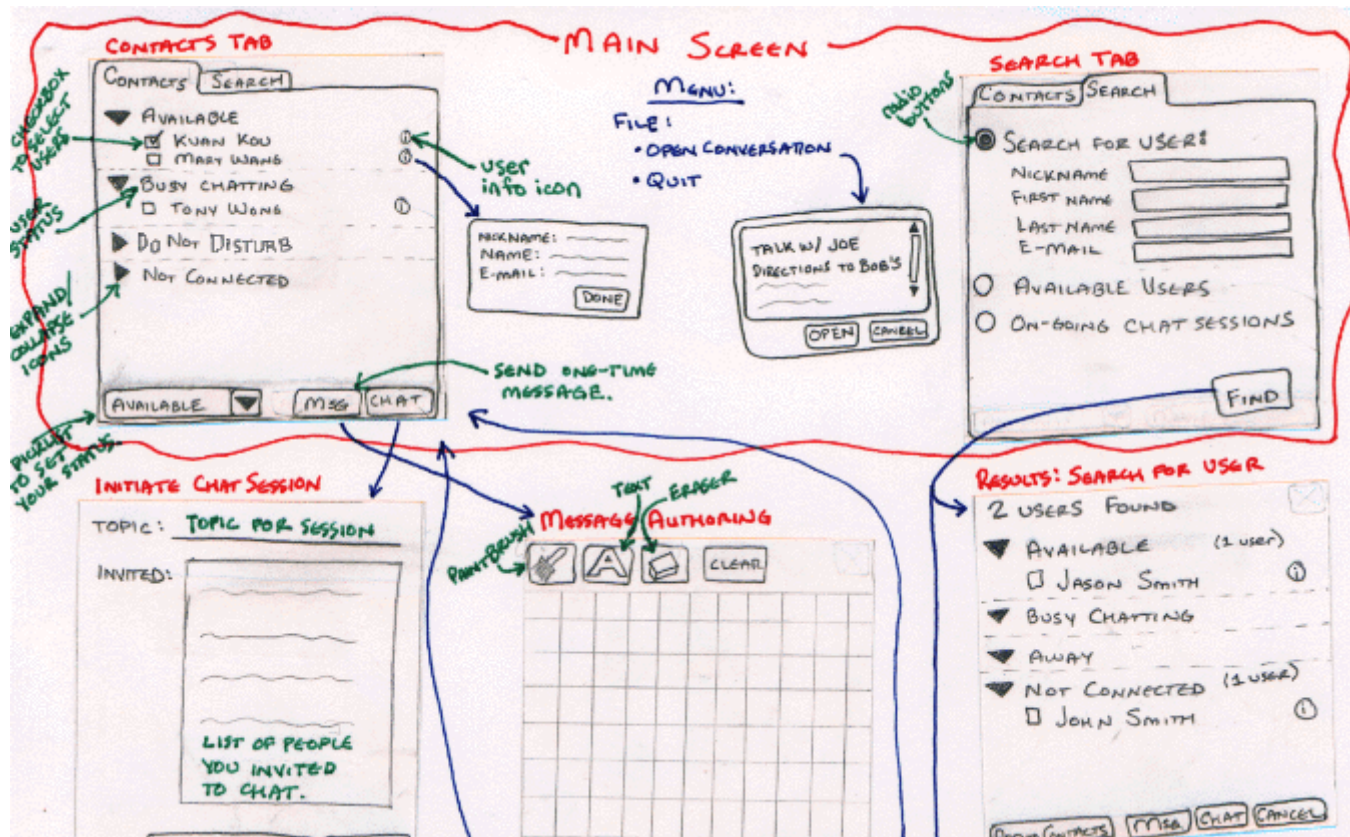

Sketches act as prototypes

A designer “plays computer”

Other design team members observe & record

Kindergarten implementation skills reduce barriers to participation in design and testing

# Sketches

# Basic Materials

Heavy, white paper

Index cards

Post-its

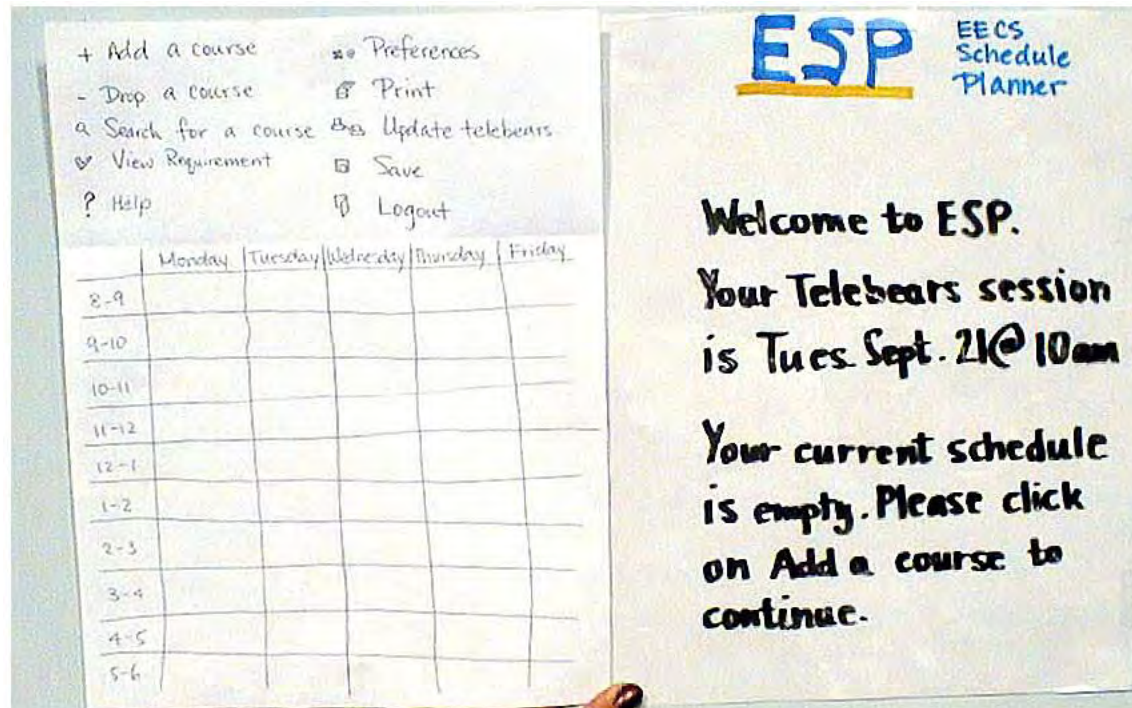

Tape, stick glue, correction tape

Pens and markers in many colors and sizes

Overhead transparencies

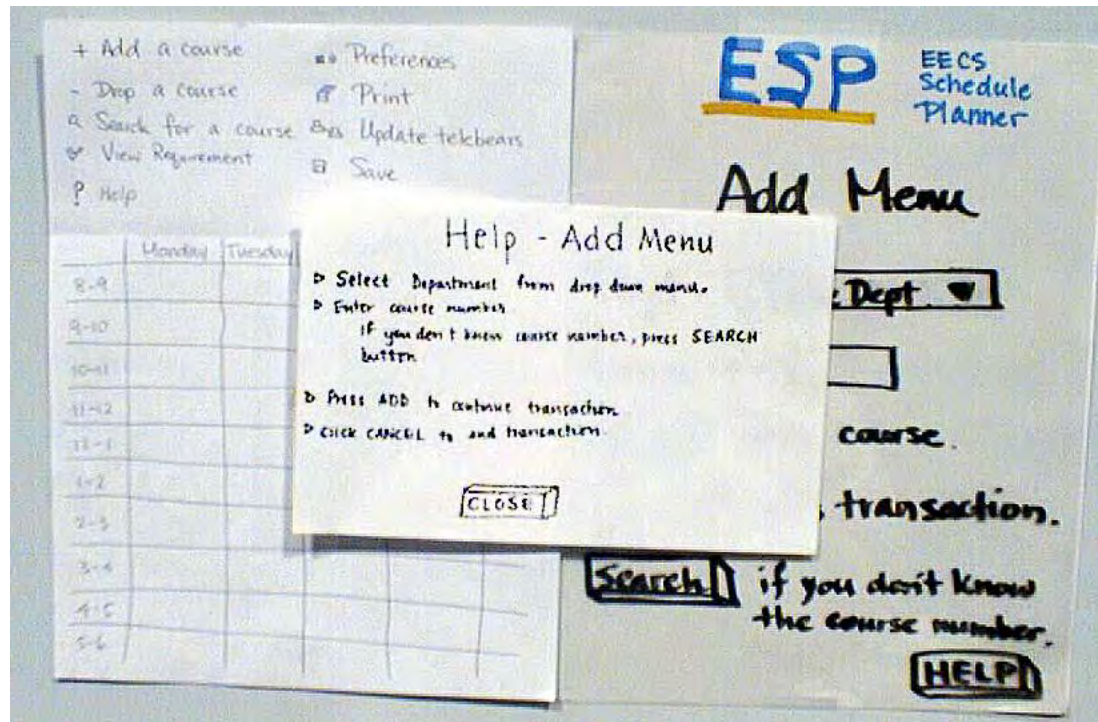

Scissors, X-Acto knife

# Paper Prototype

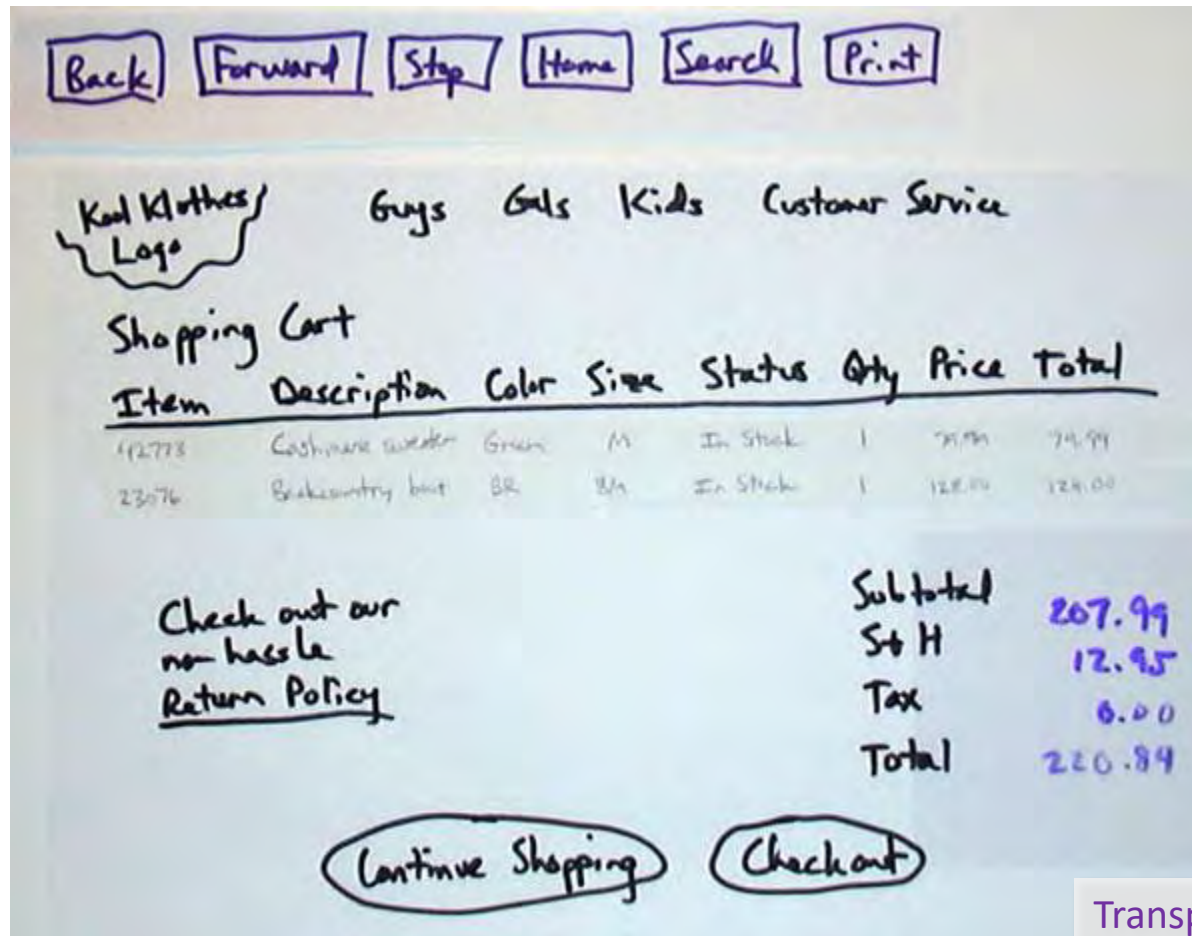

“Screen” faked with  
pre-constructed pieces

# Paper Prototype

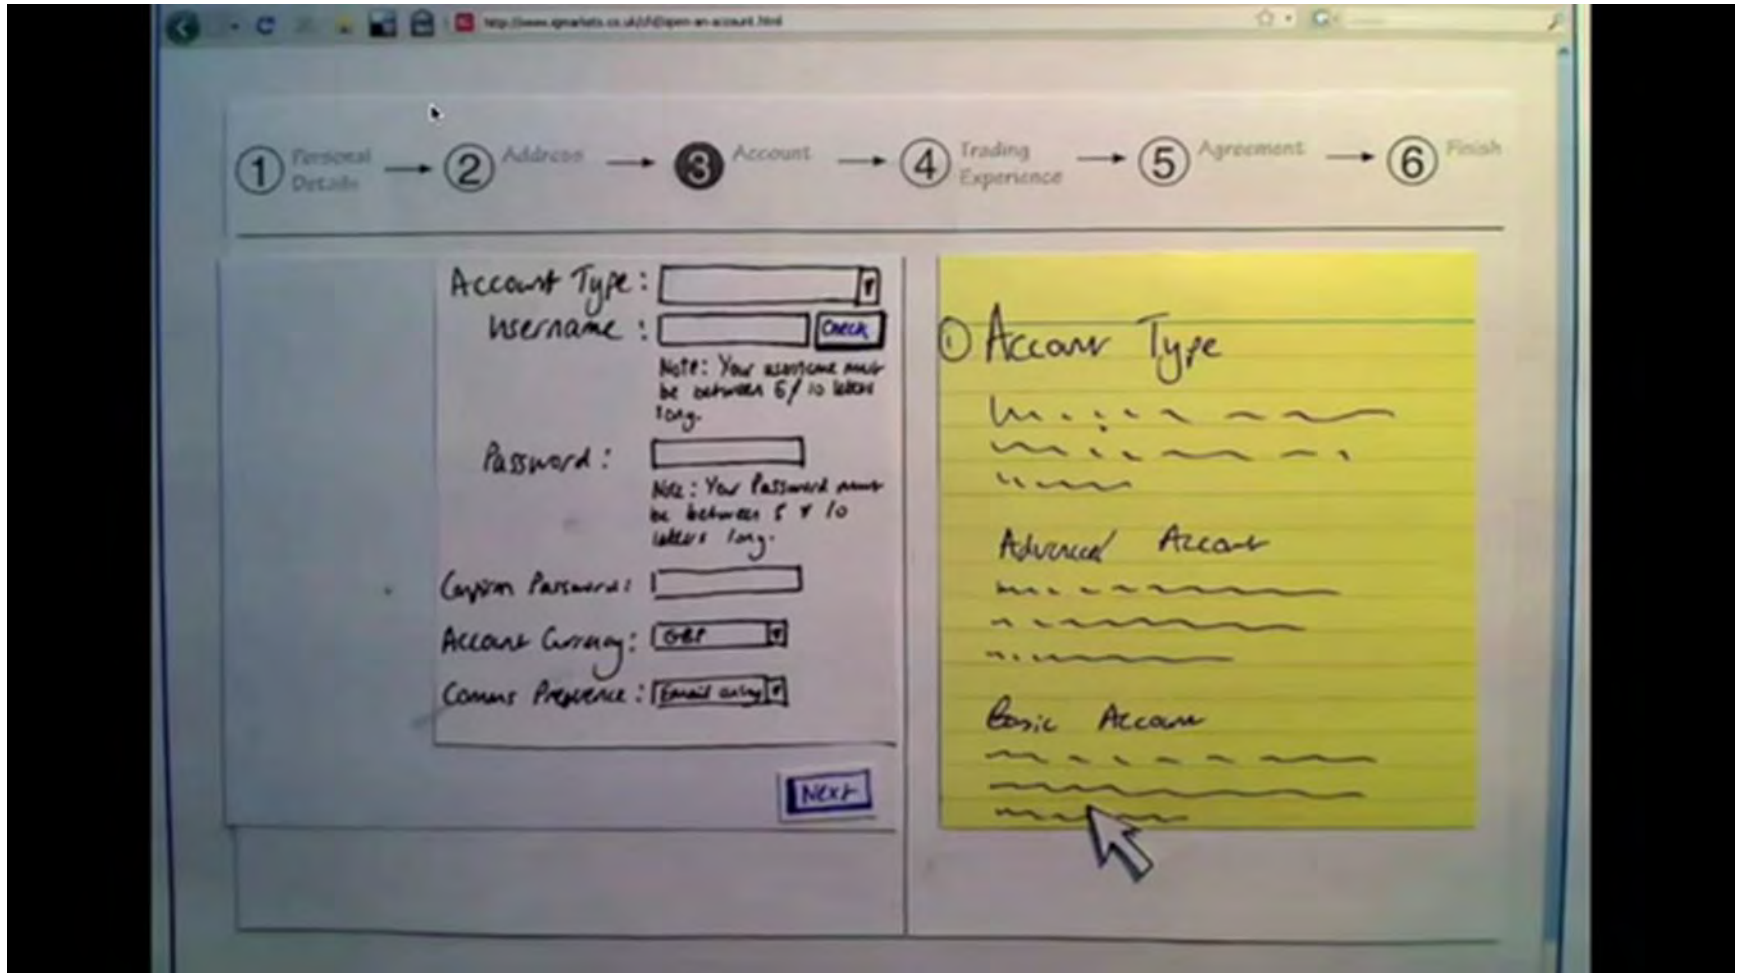

New pieces added in response to interaction

# Paper Prototype

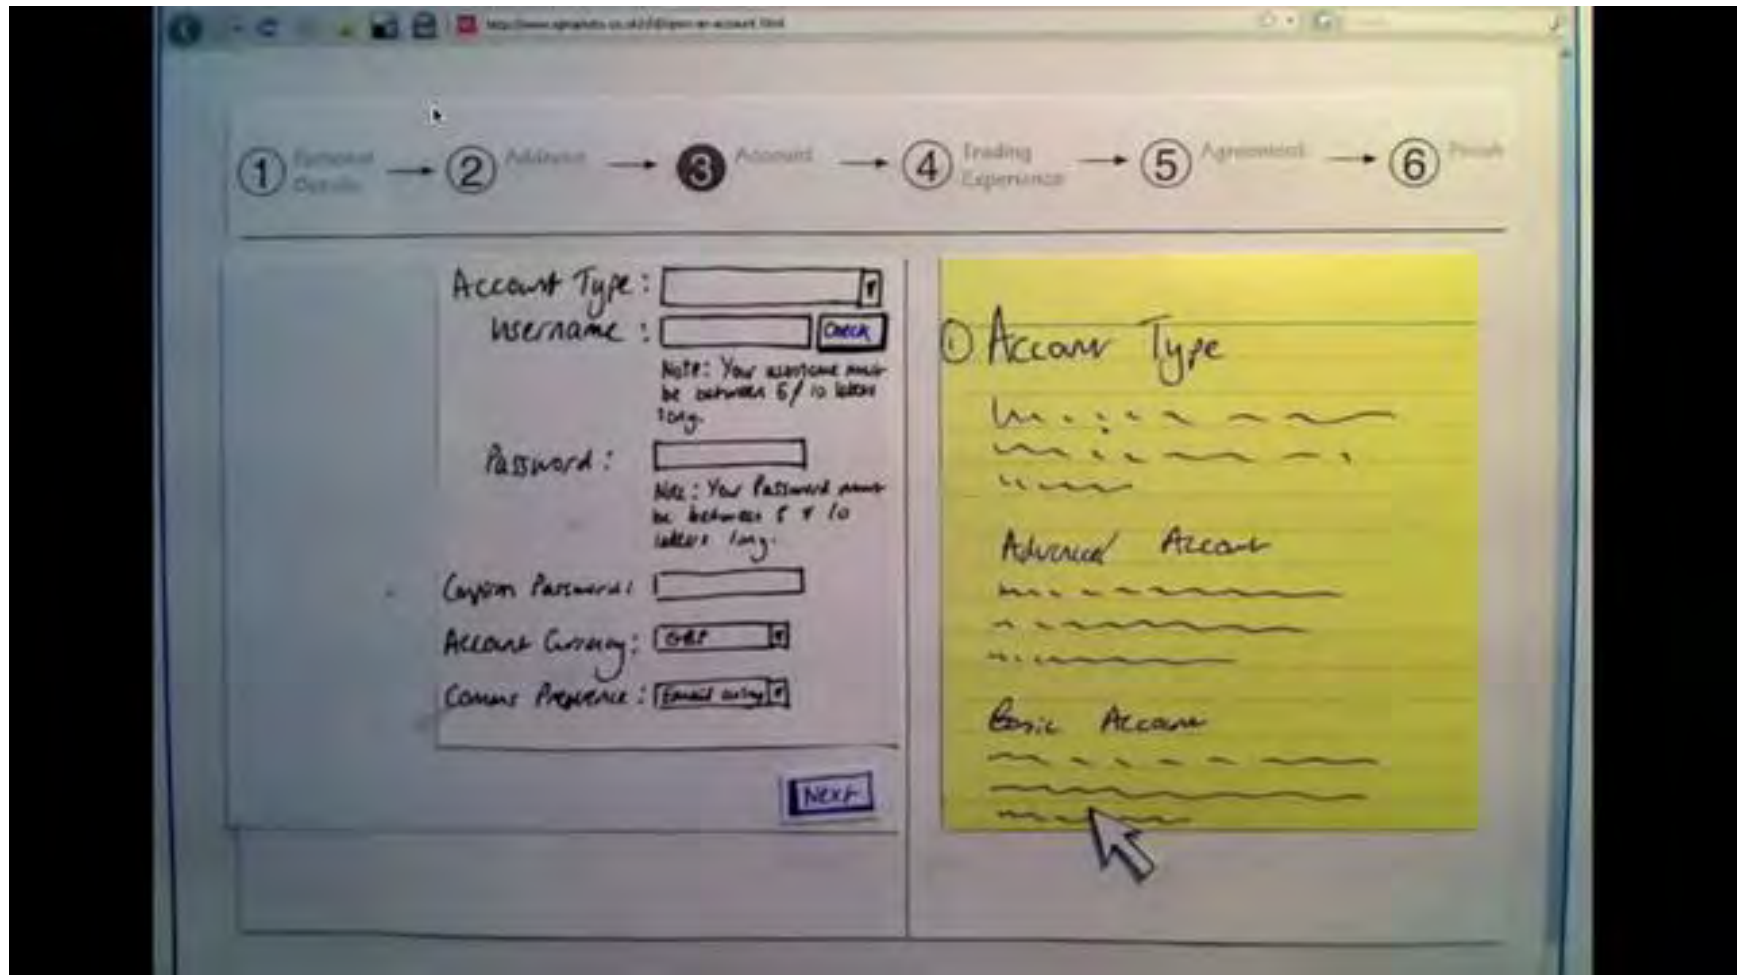

Transparencies allow flexible use of text

# Paper Prototype as Communication

# Paper Prototype as Communication

# Paper Prototype as Evaluation

# Paper Prototype as Evaluation

# Constructing the Prototype

## Set a deadline

Do not think too long

Instead build it, then learn and iterate as you go

## Put different screen regions on cards

Anything that moves, changes, appears/disappears

## Ready responses for actions

Have those pull-down menus already made

Planned tasks can guide this

## Use photocopier to make many versions

# Constructing the Prototype

Note the sketching continues

# Constructing the Prototype

Planning what is needed given tasks

# Constructing the Prototype

Prototyping physical form

# Constructing the Prototype

Prototyping physical form

# Constructing the Prototype

Remember your target platform constraints

# Constructing the Prototype

Remember your target platform constraints

# Today

Tips for Effective Presentations

Paper Prototyping

Testing

Ethics in Testing

Tasks in Testing

# Why Usability Test?

Find and fix problems in a design

Removes the expert blind spot

Obtain data to unify team around changes

Uncover unexpected behaviors

Results drive changes, sometimes innovations

In the long run, this is a win-win

Both improves design and saves money

# Deciding What Data to Collect

## Process data

Observations of what people do and think

Focused on improving this process

## Summary, statistical, or bottom-line data

Summary of what happened

(time, errors, success)

Focused on measurement

# Deciding What Data to Collect

## Process data

Observations of what people do and think

Focused on improving this process

## Summary, statistical, or bottom-line data

Summary of what happened

(time, errors, success)

Focused on measurement

## Focus on process data

Gives overview of where the problems are

More useful than “too slow” or “too many errors”

# Not a Scientific Experiment

Focus is on improving the design

Experimental control is not as necessary

Data measurement is not as precise

Number of participants is fairly small

Changes can be made

Fix the obviously broken design

Quickly explore alternatives

Modify the focus of testing between participants

# Task-Based Usability

## Set up an overall context

“We are interested in improving people’s ability to save, update, and use contacts in their phones.”

## Then prescribe tasks

1. Try to find the contacts list in the phone
2. View the contact information for John Smith
3. Change John Smith’s number to 555-555-5555

Tasks can be chained to naturally lead to next

# Stages of a Usability Test

Preparation

Introducing the Test

Conducting the Test

Debriefing

Analyzing the Data

Creating the Report

# Usability Test Proposal

A report that contains

Objective, Description of System,  
Environment and Materials,  
Participants, Methodology,  
Tasks, Test Measures

Work through it with colleagues to debug test

Reuse when presenting report of testing results

# Preparing for a Test

Select your participants

Friends and family are not your design targets

Understand background, consider recruiting questionnaire

Prepare tasks and paper prototype

Practice to avoid “bugs” in your prototype

# Introducing the Test

## Address Feelings of Judgment

“Today we are interested in learning about X.  
That’s where you come in!”

“I did not develop X.  
I just want to know what the problems are with X.”

“It is X being tested here, not you.”

# Introducing the Test

## Set Expectations for Process

“It is essential you think out loud while working with X. Tell me constantly what you are thinking, looking for, wondering, confused about, surprised, and so on. If you stop talking, I will prompt you to talk.”

“I will not be able to answer your questions when you start using X. Do you have any questions now?”

# Conducting a Test

See the Gommol reading tips on a test session

# Talk-Aloud Prompts

“Tell me what you are trying to do.”

“Please keep talking.”

“Tell me what you are thinking.”

“Are you looking for something? What?”

“What did you expect to happen just now?”

“What do you mean by that?”

“Talk-aloud” is similar but distinct from “think-aloud”

Most do not know or care about the difference,  
so you may see the terms used interchangeably

# Insight Problems

When people are trying to figure something out, talking aloud can prevent needed “insight”

If your participant is really baffled, it might not be the best time to prompt them to keep talking

Wait for a natural break, and then ask  
“What were you thinking just there?”

Retrospective talk-aloud

Record session,  
talk through immediately afterward

# Answering Questions

Remember the purpose of this test

You would not be there “in real life”

You want to see if they can figure it out

You want to see how hard it is

You want to see how catastrophic the outcome is

But you do not want to punish the person or completely undermine the rest of the session

Note any help you provide as a major failure

Do not allow observing engineers to help

# Debriefing

Give them more details about what you were interested in discovering, with their help

Answer any questions they have

Now you can show them how to accomplish the tasks, talk about what you learned from the test

Thank them for their time

Appropriate to give some compensation

# Analyzing and Reporting the Results

Tests yield many forms of data

Quantitative counts

time, success/failure

confusions, errors, workarounds

Observations

notes about when, where, why, how above occur

Participant comments and feedback

during session or via a questionnaire

# Analyzing and Reporting the Results

Summarize the data

Make a list of critical incidents

can be positive and negative

include references back to original data

try to judge why each difficulty occurred

Sort and prioritize findings

what does data tell you

what are the important results

anything missing from test

# Careful Certain Temptations

Take a photo of  
your wireframe sketch

Add clickable areas and  
transitions between screens

"Use" the prototype  
on your own device

# Today

Tips for Effective Presentations

Paper Prototyping

Testing

Ethics in Testing

Tasks in Testing

# Ethical Considerations

Testing is stressful, can be distressing

people can leave in tears

You have a responsibility to alleviate

make voluntary with informed consent

avoid pressure to participate

let them know they can stop at any time

stress that you are testing the system, not them

make collected data as anonymous as possible

# Human Subjects Approvals

Research requires human subjects review of process

This does not formally apply to your design work

But understand why we do this and check yourself

Companies are judged in the eye of the public

## Public Announcement

**WE WILL PAY YOU \$4.00 FOR ONE HOUR OF YOUR TIME**

### **Persons Needed for a Study of Memory**

\*We will pay five hundred New Haven men to help us complete a scientific study of memory and learning. The study is being done at Yale University.

\*Each person who participates will be paid \$4.00 (plus 50c carfare) for approximately 1 hour's time. We need you for only one hour: there are no further obligations. You may choose the time you would like to come (evenings, weekdays, or weekends).

\*No special training, education, or experience is needed. We want:

Factory workers	Businessmen	Construction workers
City employees	Clerks	Salespeople
Laborers	Professional people	White-collar workers
Barbers	Telephone workers	Others

All persons must be between the ages of 20 and 50. High school and college students cannot be used.

\*If you meet these qualifications, fill out the coupon below and mail it now to Professor Stanley Milgram, Department of Psychology, Yale University, New Haven. You will be notified later of the specific time and place of the study. We reserve the right to decline any application.

\*You will be paid \$4.00 (plus 50c carfare) as soon as you arrive at the laboratory.

TO:  
PROF. STANLEY MILGRAM, DEPARTMENT OF PSYCHOLOGY,  
YALE UNIVERSITY, NEW HAVEN, CONN. I want to take part in  
this study of memory and learning. I am between the ages of 20 and  
50. I will be paid \$4.00 (plus 50c carfare) if I participate.

# Today

Tips for Effective Presentations

Paper Prototyping

Testing

Ethics in Testing

Tasks in Testing

# In-Class Design, Prototype, Test

Design and prototype a touchscreen alarm clock to be deployed in a very high-end hotel brand. Your alarm clock should be immediately usable for tired, busy, or just-don't-want-to-be-bothered travelers who will spend zero time learning your interface.

In addition to displaying the current time, your design should include basic functionality for:

- turning the alarm on/off
- setting the wake-up time
- anything else you think is appropriate

Guests will interact with the alarm via a touch panel.

# Task Design is Important

The goal of a test is to figure out how a person interacts with an interface in the wild...

There are two possible explanations for why a test does not find significant problems:

- The interface does not have significant problems

- The test itself has significant problems

# Task Design is Important

Testing is not entirely in the wild

As a part of focusing the test, you often need to give a person a somewhat artificial task

The artificiality of the task may influence how people interact with an interface...

...and thus may influence the outcomes and insights gained through user testing

# Bad: Artificial Subgoals

People using the design “in the wild” may not necessarily form these same subgoals

The task should give one top-level goal, a people should form their subgoals while pursuing this

Now you want to choose the type of paper you want to print your document on. Lets imagine that Bin “B” has the paper you want to print your paper on, please complete this task.

Now set the darkness of your copies to about 50% dark. After setting the darkness, you decide you want to print 2 sides of copies on two sides of paper. Please complete this task.

# Bad: Artificial Ordering

Without an artificial ordering of information or subgoals, people might not proceed in this order

The ordering might also be biased towards the layout of the interface, which would conceal any problems with finding the appropriate control

- Enter in 10 copies, with lightness set to 10%.
- Choose 1 sided to 2 sided, use paper source bin A.
- Cover sheet needed, using paper bin B for cover sheet.
- Set stapling feature on and collating on.
- Start printing.

# Bad: Changing the Task

The task is to make copies, and this happens to involve entering information in the copier interface

But this task description is an data entry task,  
“Here is some information. Put it in the interface.”

- Make 23 copies
- With collate
- Cover sheets
- Default darkness
- 1 Sided-> 1 Sided

# Bad: Giving the Answers

Tells the person what terminology the interface uses, which they might not otherwise know

**lighten = contrast, sorted = collated?**

You are a teacher and are trying to make 40 copies of a one-sided magazine article that is 10 pages long for your class tomorrow. Due to the large number of copies, you print the article double-sided, in other words 10 page article would be printed on 5 sheets of paper. Due to the high contrast of the article, you must lighten the copy, in other words change the contrast. You then want the copies to be collated and stapled.

# Good: Giving Context

Giving realistic context through scenarios can reduce the artificiality of the task

It's your first day in the office, starting a new job. You would like to make some copies of several documents that your boss gave you to browse through. Your colleague in the next cubicle tells you that you need an access code to make copies. The code is 5150. You walk over to the copy machine at the end of the hall and realize that it is not the Xerox copier that you are accustomed to... Make 2 copies of the "Company Annual Report".

# Consider: Under-Specified Tasks

Many realistic goals are under-specified, as people have only a general idea what they want

By under-specifying the task, you can elicit realistic confusion and decision-making

You just finished fixing up the old hot rod in the garage and now its time to sell her. Make a couple copies of the pictures you took to **send into the used car sales magazines. It's ok that they're in black and white** but maybe you should lighten them up a bit. Your account billing code is 5150.

# Task Design Summary

Task design is difficult and important

Poorly designed tasks mask interface failures

Have others help you “debug” them before testing

Crowds for automated testing in build processes

# Semi-Automated Remote Usability

## Move usability testing online

- participants access the “lab” via web
- answer questions & complete tasks in “survey”
- records actions or screens for playback
- can test many people completing many tasks

## Analyze data individually or in aggregate

- playback individual sessions
- find general problem areas
- if needed, look closely with traditional methods

# Semi-Automated Remote Usability

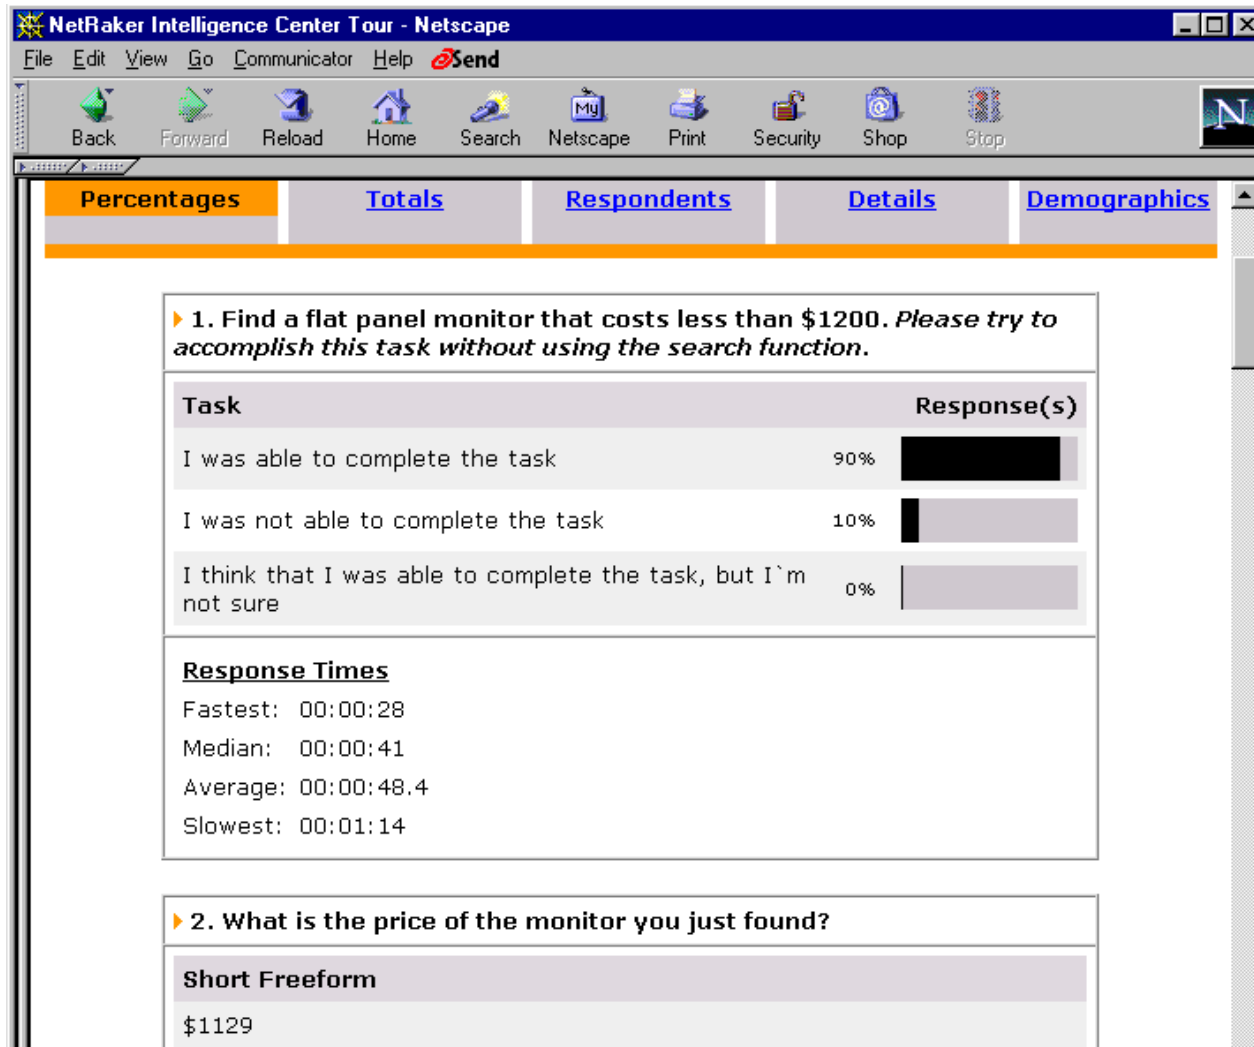

The screenshot shows a Netscape browser window titled "NetRaker Intelligence Center Tour - Netscape". The address bar contains "Document: Done". The browser's menu bar includes "File", "Edit", "View", "Go", "Communicator", "Help", and "Send". The toolbar features icons for "Back", "Forward", "Reload", "Home", "Search", "Netscape", "Print", "Security", "Shop", and "Stop".

The main content area displays a message from "netRaker": "Please refer to the web site below for the following...". Below this is a task instruction: "(1) Find a flat panel monitor that costs less than \$1200. Please try to accomplish this task without using the search function." Three radio buttons are provided for feedback: "I was able to complete the task", "I was not able to complete the task", and "I think that I was able to complete the task, but I'm not sure". A "Next" button is visible to the right of the radio buttons.

The website being visited is "ACME Computers", which features a navigation menu on the left with categories: Home, Laptops & Notebooks, Desktop Computers, Printers, Monitors, LCD Flat Panel Displays, Video Cards, Scanners, Digital Cameras, Palmtops, Show Order, and Info. The main content area is titled "LCD Flat Panel Displays" and lists three products:

Product	Price
Mitsubishi 18IN LCD PANEL	\$3,460.00
Compaq 18IN TFT 28MM 1280X1024	\$3,839.00
IBM 18IN/18.0V ANALOG TFT	\$4,099.00

Which image has the higher clickthrough? By how much?

A: Solitaire game

A is 61% better

B: Poker game

# Never Underestimate Solitaire

The screenshot shows a web browser displaying a Fortune magazine article. The article title is "Activision Acquires Candy Crush Maker King Digital For \$5.9 Billion" by Mathew Ingram, dated November 3, 2015. The main image shows a tablet displaying the Candy Crush game interface. The article text discusses the acquisition price as a premium to the current price but a discount to the recent IPO price. It notes that King Digital Entertainment, the company behind popular Facebook games like Candy Crush, has decided that being a publicly-traded entity isn't all it's cracked up to be. King announced late Monday that it is being acquired by Activision Blizzard, the maker of popular console and PC games such as Call of Duty, for \$5.9 billion. The purchase price of \$18 a share amounts to a premium of about 16% over the recent closing price for King's stock (KING +19.32%)—but it's about 20% lower than the price at which the company went public 18 months ago. At that

# Office Online Feedback

**A**

Please let us know if this content was helpful.

Rate this content:

☆☆☆☆☆

Tell us why you rated the content this way (optional):

Remaining characters: 650

Submit

**B**

How helpful was this information?  
Click a star.

Not helpful ☆☆☆☆☆ Very helpful

Click to rate: 3 out of 5 stars

How helpful was this information?  
Click a star.

Not helpful ☆☆☆☆☆ Very helpful

Why did you rate the information this way?

Remaining characters: 650

Submit

Feedback A puts everything together, whereas feedback B is two-stage: question follows rating.

Feedback A just has 5 stars, whereas B annotates the stars with “Not helpful” to “Very helpful” and makes them brighter.

Which one has a higher response rate? By how much?

Feedback A puts everything together, whereas feedback B is two-stage: question follows rating.

Feedback A just has 5 stars, whereas B annotates the stars with “Not helpful” to “Very helpful” and makes them brighter.

Which one has a higher response rate? By how much?

**B gets more than double response rate.**

# Another Feedback Variant

Call this variant C. Like B, also two-stage.

Which one has a higher response rate, B or C?

C

**Was this information helpful?**

How was this information helpful?

What are you trying to do?

How can we make this information more helpful?

```
graph TD; Q1[Was this information helpful?] --> B1[Yes]; Q1 --> B2[No]; Q1 --> B3[I don't know]; B1 --> T1[How was this information helpful?]; B2 --> T2[How can we make this information more helpful?]; B3 --> T3[What are you trying to do?]; T1 --> B1_1[Back]; T1 --> B1_2[Submit]; T2 --> B2_1[Back]; T2 --> B2_2[Submit]; T3 --> B3_1[Back]; T3 --> B3_2[Submit];
```

# Another Feedback Variant

Call this variant C. Like B, also two-stage.

Which one has a higher response rate, B or C?

C

**Was this information helpful?**

How was this information helpful?

What are you trying to do?

How can we make this information more helpful?

C outperforms B by a factor of 3.5

# Office Online

## Clicks on revenue generating links (red links)

The screenshot shows the Office Online homepage. At the top, there is a navigation bar with links for Home, Products, Help and How-to, Downloads, Clip Art, Templates, and Microsoft Office Live. Below the navigation bar, there is a search bar and several utility links: "Read the Inside Office Online blog", "Make your own help videos", and "Check for updates". The main content area features a large banner for "Buy the 2007 Office system today" with a red box around the button. To the right of the banner, there is a section titled "Today on Office Online" with several sub-sections: "Get out of town! Find out how Office makes travel easy", "Get Office" (with a red box around the "Buy 2007 now" link), "Find training", "Get help", and "Office Community". At the bottom, there are several category links: "Home and school", "Work", "Community", "Training", and "Resources".

# Examples Where Data Is Wrong

If something is “amazing,” find the flaw!

If you have a mandatory birth date field, and people think it's unnecessary, you will find lots of 11/11/11 or 01/01/01

If you have an optional drop down, do not default to the first alphabetical entry, or you will have lots of: jobs = Astronaut

Traffic to doubled between 1-2am Nov 6, 2011 for many web sites, relative to same hour week prior

# Data Driven Methods Not Just Online

[◀ PREVIOUS](#)
[NEXT ▶](#)
[Back to story](#)

## 1999

Made from cardboard, the first Netflix mailer weighs more than an ounce. But with only 100,000 customers, reducing material and shipping costs is not yet a priority for the company.

[◀ PREVIOUS](#)
[NEXT ▶](#)
[Back to story](#)

## 2000

Thick paper replaces cardboard. DVDs are inserted and removed from the top rather than the side.

[◀ PREVIOUS](#)
[NEXT ▶](#)
[Back to story](#)

## 2000

Full-color printing is introduced. Top-loading is abandoned in favor of side-loading, which is judged more convenient.

NUCCI STUDIO

[NEXT >>](#)

# Data Driven Methods Not Just Online

[PREVIOUS](#)
[NEXT](#)
[Back to story](#)

**2000**

Customers are asked to peel off a sticker to reveal Netflix's return address. The design is eventually deemed too complex.

[PREVIOUS](#)
[NEXT](#)
[Back to story](#)

**2000**

Made from plastic instead of paper, this mailer is cheaper, but it sometimes inflates when transported on airplanes.

[PREVIOUS](#)
[NEXT](#)
[Back to story](#)

**2001**

An airhole (the black dot on the left side of the mailer) is added to prevent the package from inflating.

[PREVIOUS](#)
[NEXT](#)
[Back to story](#)

**2001**

Netflix returns to paper because it's easier to recycle. Foam padding is added to reduce breakage.

[NEXT](#)

NUCCI STUDIO

# Data Driven Methods Not Just Online

← [PREVIOUS](#) [NEXT](#) ▶ [Back to story](#)

**2001**  
Foam padding is dropped because the benefits don't justify the cost. The company gives top-loading another try.

← [PREVIOUS](#) [NEXT](#) ▶ [Back to story](#)

**2001**  
Marking a return to side-loading, this mailer is a direct ancestor of the one the company uses today.

← [PREVIOUS](#) [NEXT](#) ▶ [Back to story](#)

**2003**  
Instead of sealing the entire top and bottom, Netflix introduces a circular sticker, affixed only on the top.

← [PREVIOUS](#) [NEXT](#) ▶ [Back to story](#)

**2004**  
A window shows the disc bar code. Speculation is that this enables storing discs in mailers prior to shipping.

[NEXT](#)»

NUCCI STUDIO

# Limitations of Data Driven Testing

Drives hill-climbing, but not overall design

A design may be better, but is it good?

Impossible for new designs to compete

Can be difficult to scale to many features

Now we step through a larger example

## Goodbye, Google

20 March 2009 design google

Part 1 of 2 (here's Part 2)

Today is my last day at Google.

I started working in-house at Google almost three years ago. I built a team from scratch. I was fortunate to hire a team of a very talented designers. We introduced Visual Design as a discipline to Google. And we produced amazing work together. I'm very proud of my team, and I wish them well. They have a lot of challenging work ahead. But for me, it's time to move on.

Do I have something else lined up? Yes. That will be covered in Part 2. So I'm not leaving just to leave. But I'm not going to sugarcoat the reasons for my departure either. The scale at which Google operates was an early attractor for me. Potential to impact millions of people? Where do I sign? Unfortunately for me, there was one small problem I didn't see back then.

When I joined Google as its first visual designer, the company was already seven years old. Seven years is a long time to run a company without a classically trained designer. Google had plenty of designers on staff then, but most of them had backgrounds in CS or HCI. And none of them were in high-up, respected leadership positions. Without a person at (or near) the helm who thoroughly understands the principles and elements of Design, a company eventually runs out of reasons for design decisions. With every new design decision, critics cry foul. Without conviction, doubt creeps in. Instincts fail. "Is this the right move?" When a company is filled with engineers, it turns to engineering to solve problems. Reduce each decision to a simple logic problem. Remove all subjectivity and just look at the data. Data in your favor? Ok, launch it. Data shows negative effects? Back to the drawing board. And that data eventually becomes a crutch for every decision, paralyzing the company and preventing it from making any daring design decisions.

Yes, it's true that a team at Google couldn't decide between two blues, so they're testing 41 shades between each blue to see which one performs better. I had a recent debate over whether a border should be 3, 4 or 5 pixels wide, and was asked to prove my case. I can't operate in an environment like that. I've grown tired of debating such minuscule design decisions. There are more exciting design problems in this world to tackle.

I can't fault Google for this reliance on data. And I can't exactly point to financial failure or a shrinking number of users to prove it has done anything

Wizard of Oz Methods in Testing

Remote Usability Testing

Patterns

# Design Equals Solutions

Design is about finding solutions

Designers often reinvent

- Hard to know how things were done before

- Why things were done a certain way

- How to reuse solutions

One option is patterns

- But this is also why we point you at research

# Design Patterns

Design patterns communicate common design problems and solutions

First used in architecture [Alexander]

How to create a beer hall where people socialize?

# Design Patterns

Somewhere in the community at least one big place where a few hundred people can gather, with beer and wine, music, and perhaps a half-dozen activities, so that people are continuously criss-crossing from one to another.

**criss-cross paths**

**activities**

**open alcoves**

# Using Design Patterns

Not too general and not too specific

use a solution “a million times over,  
without ever doing it the same way twice”

Design patterns are a shared language

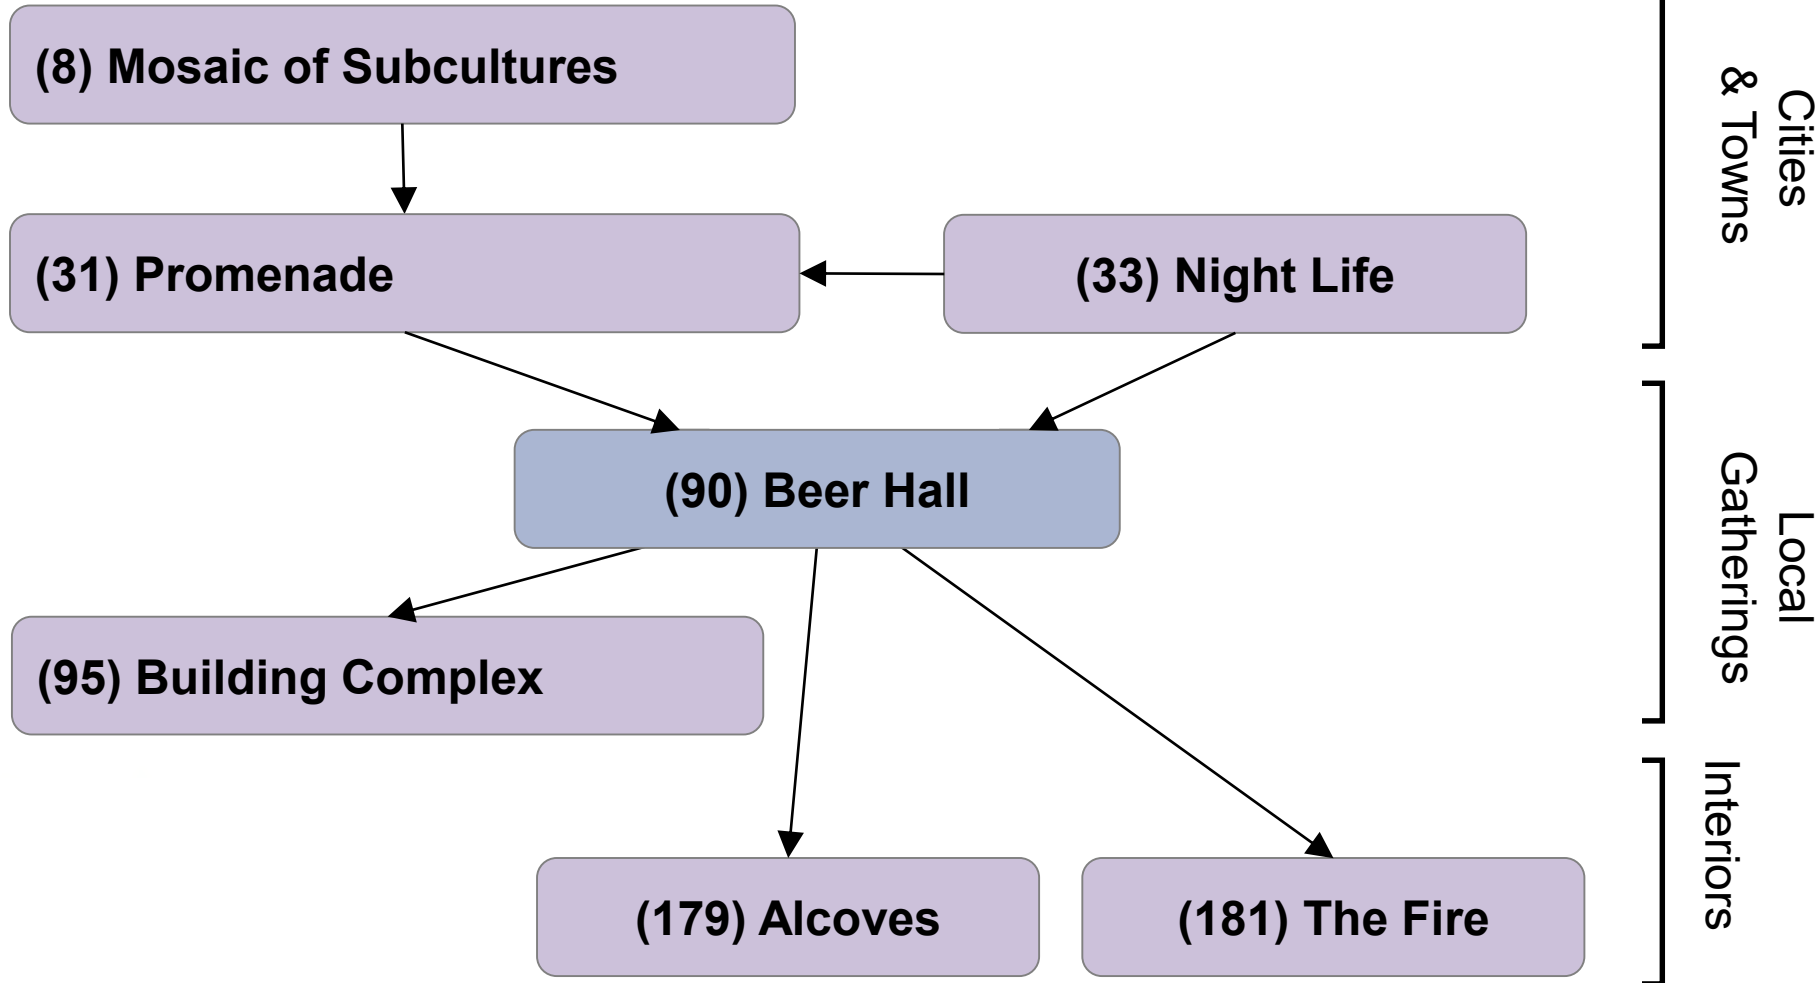

for “building and planning towns,  
neighborhoods, houses, gardens, and rooms”

Beer hall is part of a center for public life

Beer hall needs spaces for groups to be alone

#### Album Notes

Weezer: Rivers Cuomo (vocals, guitar); Brian Bell (guitar); Matt Sharp (bass); Patrick Wilson (drums). Recorded at Cello Studios, Los Angeles, California in December 2000. In 1994 Weezer burst onto the music scene, reaching platinum status with their debut, and in the process proving that there was still room in an airbrushed MTV world for unrepentant power pop played by decidedly non-airbrushed guys. Following a brief sojourn into semi-deconstructionism, 1997's PINKERTON, the four men who make up Weezer serve up a third offering, WEEZER 2001, returning to the sound and producer of their successful debut. Nowhere does producer Ric Ocasek define his trademark refined power pop style more than with Weezer. Unlike the immediate, obvious pop hooks of the string of singles on the first album, though, the songs on WEEZER 2001 may take a few listens to settle in. However, once the subtle-yet-undeniable refrains of such tracks as "Crab," "Don't Let Go," and first single "Hash Pipe" make their way into your skull, they're there to stay, as furious, fuzzy, layered guitars compliment Rivers Cuomo's raw, vulnerable vocals. While this disc clocks in at less than a half-hour long, it packs more hooky wallop than many double live albums.

# Web Design Patterns

Communicate design problems & solutions

how to create navigation bars for finding relevant content

how to create a shopping cart that supports check out

how to make e-commerce sites where people return & buy

# NAVIGATION BAR (K2)

Problem: Customers need a structured, organized way of finding the most important parts of your Web site

The image shows a screenshot of a website with several navigation elements highlighted by red boxes:

- Top Navigation Bar:** A dark brown bar with the text "Group for User Interface Research" on the left and a menu of "Home", "Projects", "People", "Publications", and "Links" on the right.
- Left Sidebar:** A light brown sidebar containing the heading "DENIM and SILK" and a list of links: "Download", "Documentation", "Support", "Research", "Publications", and "More Projects".
- Main Content Area:** A large white area with the heading "DENIM and SILK" and a small graphic of a notepad labeled "SILK".
- IBM Header:** A blue header with the IBM logo, "United States", a search bar, and a navigation menu: "Home", "Products & services", "Support & downloads", and "My account".
- Country Selector:** A blue box with the text "Select a country" and a dropdown menu for "Industries" with a "Go" button.
- Industry List:** A list of industry links: "Home / home office", "Small business", "Medium business", "Government", and "Education".
- Promotional Banner:** A white banner with a laptop image and the text "Buy today, ship today" and "If you need it fast, IBM can ship select PC models to you today when you buy by 3 p.m. Eastern, Monday-Friday, (U.S. only)".
- Product Highlights:** Three small product cards on the right: "Tune-up your bottom line", "e-business on demand", and "IBM Global Financing".

# NAVIGATION BAR (K2)

Solution diagram

Captures essence on how to solve problem

# Pattern Groups

## Patterns organized by group

- A** Site genres

# PROCESS FUNNEL (H1)

Problem:

Need a way to help people complete highly specific stepwise tasks

Ex. Create a new account

Ex. Fill out survey forms

Ex. Check out

# PROCESS FUNNEL (H1)

The screenshot displays the Half.com website interface. At the top, there is a navigation bar with the Half.com logo, a promotional banner for 'Counting Crows: Hard Candy' with a 37% discount, and links for 'my account', 'cart', 'help', 'home', and 'sign in'. Below this is a category menu with buttons for Home, Books, Music, DVDs/Movies, Video Games, Computers & Software, Electronics, and Everything Else. A secondary navigation bar includes 'Gift Certificates', 'Wish List', 'Pre-Orders', 'Sell Your Stuff', and 'New Users'. A search bar is located below the navigation, with a dropdown menu set to 'All Categories' and a 'go' button.

On the left side, there is a section titled 'People with similar tastes also enjoyed...' featuring three product recommendations:

- Weezer (1994)** (CD, 1994) Weezer **\$5.00** (Save \$6.97)
- Pinkerton** (CD, 1996) Weezer **\$6.00** (Save \$10.95)
- All Killer No Filler [ECD]** (CD, 2001)

The main content area is titled 'Redeeming a Gift Certificate or Coupon?' and features a 'Proceed to Checkout' button with a 'Speedy Checkout' option. Below this is the 'Shopping Cart' section, which displays the following item:

<b>Weezer (2001)</b> Weezer, Weezer (Music) CD, Release Year: 2001 Seller: <a href="mailto:naotia@hotmail.com">naotia@hotmail.com</a> (35) Condition: Like New • Notes: Perfect condition	Item: \$8.30 Media Mail: \$2.45 <a href="#">(Change Shipping Method)</a>
<b>TOTAL: \$10.75</b>	

Below the cart, there is a 'Gift Certificates and Coupons' section with a 'Redeem' button. The text reads: 'Redeeming your Half.com Gift Certificate or Coupon is easy. Just enter your Claim Code in the box to the right and click "Redeem".'

At the bottom right, there is another 'Proceed to Checkout' button with a 'Speedy Checkout' option.

# PROCES

- What's different?

- No tab rows
- No impulse buys
- Only navigation on page takes you to next step

The screenshot shows the checkout process on the half.com by eBay website. The page is titled "Step 1 - Choose Shipping Address". It features a navigation bar at the top with "Checkout" and "Shipping" tabs. The main content area is divided into two sections: "Ship my order to:" and "Enter a new shipping address:". The "Ship my order to:" section displays a pre-filled address for Jason Hong at UC Berkeley, with a "Use This Address" button. The "Enter a new shipping address:" section contains form fields for Name, Street address, City, State (a dropdown menu), ZIP code, and Country (pre-filled with USA). A "Save Changes" button is located at the bottom of the form.

- What's the same?

Fans of Gladiator's original theatrical release will appreciate this extended version of the epic Ridley Scott film, packed with 17 extra minutes of action footage and gripping dialogue. Featuring a strong supporting cast and an Oscar-winning performance from actor Russell Crowe as the dauntless Roman general Maximus, this big-budget Best Picture winner became an instant classic -- and helped elevate its leading man to icon status.

**Starring:** Russell Crowe, Joaquin Phoenix

## Solution Diagram

# Related Patterns

# Patterns Support Creativity

Patterns come from successful examples

sites that are so successful that lots of people are familiar with their paradigms

interaction techniques/metaphors that work well across many sites (e.g., shopping carts)

Not too general and not too specific

you need to specialize to your needs

Patterns let you focus on the hard, unique problems of your design situation

# Principles, Guidelines, Templates

Patterns help design without over-constraining

unlike principles, patterns are not too general

unlike guidelines, patterns discuss tradeoffs, show good examples, and tie to other patterns

unlike style guides, patterns not too specific, can be specialized to a design

unlike templates, patterns illustrate flows and relationships among different pages

# Web Design Patterns

H1 PROCESS FUNNEL

## Pattern Name and Number

PROCESS FUNNEL H1

Figure H1.1

Dell uses a process funnel consisting of several logical steps that guide customers to quickly configure and purchase a personal computer. Information in a pop-up window shows additional details but keeps customers in the funnel so that they can continue to completion.

## Exemplar

content—can inadvertently lead them away from accomplishing their goals. These diversions can have legitimate purposes, however, such as providing continuity, giving visitors opportunities to explore, providing instructions, or providing extra details. Striking a balance between these two goals can be challenging.

**Required to Complete a Task** • Customers often need to complete highly specific tasks on Web sites, but pages with tangential links and many questions can prevent them from carrying out these tasks successfully. People enjoy completing the tasks they start. Yet all kinds of distractions—including links that lead off the critical path, extra steps, and extra

**Provide a Progress Bar to Let Customers Know How Far They've Come** • Showing a progress bar at the top of the page indicates how much farther they have to go to complete the task. It is often not worth your time to create a progress bar that is not clickable because doing so does not benefit for customers.

## Forces & Solution

**Remove Unnecessary Links and Content While Reinforcing the Brand** • Removing links and content unrelated to the task at hand will reduce the number of distractions, making it more likely that your customers will complete their tasks. Remove all NAVIGATION BARS (K2), TAB BARS (K3), BREAD CRUMBS (K6), and EMBEDDED LINKS (K7), LEAVENING BUTTONS (K4) that help visitors reach their goals. Take out any content that is superfluous to the task.

**Reinforce the Web site brand to minimize any disorientation customers might feel from sudden changes in navigation options.** Use the same logo throughout the Web site so that no one is confused, and people know they're still on the same site.

### \* BACKGROUND

All Web applications that lead visitors through stepped tasks—PERSONAL E-COMMERCE (A1), SELF-SERVICE GOVERNMENT (A4), WEB APIS THAT WORK (A10), and ENABLING INTRANETS (A11)—need ways to help people succeed at completing the tasks.

### \* PROBLEM

Customers often need to complete highly specific tasks on Web sites, but pages with tangential links and many questions can prevent them from carrying out these tasks successfully.

People enjoy completing the tasks they start. Yet all kinds of distractions—including links that lead off the critical path, extra steps, and extra

## Background

## Problem Statement

where they are in the process funnel and how much farther they have to go.

(www.half.com, October 24, 2001)

# Web Design Patterns

## H1 PROCESS FUNNEL

**Use Pop-Up Windows to Provide Extra Information, without Leading Visitors Out of the Process Funnel** • Sometimes customers need additional information that you have not provided on a page, such as extra help or product details. Provide a link to a POP-UP WINDOW (H6) containing CLEAN PRODUCT DETAILS (F2) (see Figure H1.1), CONTEXT-SENSITIVE HELP (H8), or information from the FREQUENTLY ASKED QUESTIONS (H7) page, to make the extra information less intrusive. Your challenge is to implement this extra content without detracting from the main purpose.

**Make Sure the Back Button Always Works** • Customers often use the **Back** button on browsers to modify answers they have typed in on previous pages. However, if the Web site is not implemented correctly, the information they have already entered may be lost when they hit the **Back** button, forcing them to type everything again. In the worst case, people get a cryptic error message saying that the posted information was lost. You can address this annoying problem by temporarily storing the information they type in on each page, redisplaying this information if customers hit the **Back** button, and then overriding the temporarily stored information on the page if it is changed.

**Always Make It Clear How to Proceed to the Next Step** • Some Web pages are longer than can be displayed on a customer's Web browser. The problem is that people sometimes get lost if the critical ACTION BUTTON (K4), the one that takes them to the next step, is hidden below the fold. Place HIGH-VISIBILITY ACTION BUTTONS (K5) both high *and* low on the page, ensuring that at least one of the critical action buttons is visible without scrolling.

**Prevent Errors Where Possible, and Provide Meaningful Error Messages When Errors Do Occur** • People will always make errors. You can provide good customer support and sample input to help PREVENT ERRORS (K1), and provide MEANINGFUL ERROR MESSAGES (K1.3) when errors do occur.

### \* SOLUTION

Minimize the number of steps required to complete a task, keeping them between two and eight. Remove unnecessary and potentially confusing links and content from each page, while reinforcing the brand to maintain a sense of place. Use pop-up windows to provide extra information, without leading people out of the process funnel. Make sure the **Back** button always works so that customers can correct errors. Make it clear how to proceed to the next step

## Bus Stops

Figure H1.3

A process funnel lets people complete their goals by breaking down complicated tasks into a small number of steps, using pop-up windows for detailed information, and reducing the number of links to only the critical ones, so that people are never distracted.

## Solution Diagram

## Related Patterns

### \* CONSIDER THESE OTHER PATTERNS

Many kinds of Web sites use process funnels, including sites for PERSONAL E-COMMERCE (A1), SELF-SERVICE GOVERNMENT (A4), WEB APPS THAT WORK (A10), and ENABLING INTRANETS (A11). Customers use process funnels when they finalize purchases through QUICK-FLOW CHECKOUT (F1), when they create new accounts through SIGN-IN/NEW ACCOUNT (H2), and when they post new messages to a RECOMMENDATION COMMUNITY (G4), to name some examples.

- A1 A4
- A10 A11
- F1
- H2
- G4
- K2 K3
- K4 K5
- K4 K6 K7
- E1
- K1.2
- K1.3
- H5
- H8
- H7 H6
- I2 K5

Remove NAVIGATION BARS (K2), TAB ROWS (K3), irrelevant ACTION BUTTONS (K4), LOCATION BREAD CRUMBS (K6), and EMBEDDED LINKS (K7) to ensure that customers stay on their paths. However, keep strong site BRANDING (E1) so that customers still know where they are.

Design process funnels to PREVENT ERRORS (K1.2), and provide MEANINGFUL ERROR MESSAGES (K1.3) when errors do occur.

Track your customers through PERSISTENT CUSTOMER SESSIONS (H5) to avoid problems with the **Back** button, and to save customer-entered information.

Move extra content, such as CONTEXT-SENSITIVE HELP (H8) and FREQUENTLY ASKED QUESTIONS (H7), to POP-UP WINDOWS (H6) to keep the main task page on the screen. Make the next action visible by keeping it ABOVE THE FOLD (I2) and by using HIGH-VISIBILITY ACTION BUTTONS (K5).

## E13 - Notification on Access of Personal Data

Figure 1. AT&T Wireless Find Friends service notifies your friend if you ask for his or her location.

### Synopsis

Systems can provide feedback about what is being monitored and recorded

### Background

This pattern is one part of providing [Appropriate Privacy Feedback](#) to individuals.

### Problem

How can systems provide feedback about what is being monitored, as well as the current state of the system?

### Solution

There at least two different times that notification can be used, during an access and afterwards.

### Forces

A key design decision here is whether the person is simply notified or has choice over whether information is disclosed. There are plausible cases for each. For example, "always let my family know where I am", but "let me choose whether to reveal my current location if a co-worker asks". This is primarily an issue of trust and boundaries with other individuals.

[Privacy Mirrors](#) also act as a form of notification. Notification can also be combined with unobtrusive displays to provide constant feedback.

# UbiComp Pre-Patterns

## B6 • FIND A FRIEND

Figure 1. AT&T Wireless' mMode service allows customers to add friends to a friend list, find out who is nearby, and call or send messages to them. Users can make themselves invisible whenever they want.

### • BACKGROUND

This pattern discusses services that allow people to find where their friends are while allowing those friends some level of privacy. This pattern is useful for GUIDES FOR EXPLORATION AND NAVIGATION (A5).

### • PROBLEM

People would like to know where their friends are, for impromptu communication and gatherings. At the same time, those people may not always want to be tracked.

**Displaying people's location** • There are several different ways of displaying a person's location. A straightforward approach is to simply show the location in text, for example "near corner of Euclid Ave and Hearst Ave" or "in Soda Hall". Another approach is to show the data on a map, or possibly even an ACTIVE MAP (B1) that is constantly updated.

Figure 2. UC San Diego's ActiveCampus project shows your friends' location in real time. While useful, this visualization raises many privacy concerns.

**Managing privacy concerns** • There are many privacy concerns about find-a-friend applications due to the potential for abuse. This is not just the fear of "Big Brother," but also so-called "Fisher Brothers" individuals who

One “look” for your app  
Or targeted at each device

# Dark Patterns

A Dark Pattern is an interface that has been carefully crafted to trick people into doing things, such as buying insurance with their purchase or signing up for recurring bills.

## Disguised Ads

Ads that are disguised as other kinds of content or navigation, in order to get users to click on them

# Dark Patterns

A Dark Pattern is an interface that has been carefully crafted to trick people into doing things, such as buying insurance with their purchase or signing up for recurring bills.

## Friend Spam

A site or game asks for your credentials, then goes on to publish content or send out bulk messages

# Dark Patterns

The screenshot shows a web browser window with the URL [https://www.fastcodesign.com/3051906/fast-feed/after-lawsuit-settlement-linkedin-dishonest-design-is-now-a-13-million-problem?utm\\_source=facebook](https://www.fastcodesign.com/3051906/fast-feed/after-lawsuit-settlement-linkedin-dishonest-design-is-now-a-13-million-problem?utm_source=facebook). The article is titled "After Lawsuit Settlement, LinkedIn's Dishonest Design Is Now A \$13 Million Problem" and is categorized under "EVIDENCE". The article text discusses how LinkedIn's use of dark UX patterns in its sign-up process led to a \$13 million lawsuit settlement. It mentions that users are often tricked into expanding their professional network without their permission. A photo of a smartphone displaying the LinkedIn sign-up form is included. The article is presented in San Jose's U.S. District Court in the case *Perkins v. LinkedIn*, where the key issue is spam during the sign-up process. The article also notes that under California law, the court has deemed this practice illegal.

**EVIDENCE**

## After Lawsuit Settlement, LinkedIn's Dishonest Design Is Now A \$13 Million Problem

HOPEFULLY, THIS WILL BE A LESSON TO OTHER COMPANIES WHO USE DARK UX PATTERNS TO TRICK THEIR USERS.

10 NOTES 5 PIN 108 PLUS 853 SHARE 1.2K TWEET 1.5K LIKE

Anyone who has ever signed up, or even known anyone who has signed up, for LinkedIn has probably found themselves on the receiving end of dozens of follow-up emails, inviting you to "expand your professional network." Even worse, they're virtually impossible to opt-out of. It's a scummy use of dark UX patterns by a company that should know better. Now, LinkedIn is going to be paying for it as part of a class-action lawsuit, to the tune of \$13 million.

Photo: Bloomua via Shutterstock

Presented in San Jose's U.S. District Court, the key issue in *Perkins v. LinkedIn* is spam. Namely, during the user sign-up process, LinkedIn claims that it "will not store your password or email anyone without your permission." Despite this, LinkedIn sends automated follow-up email reminders on a new user's behalf to any contacts harvested from their webmail accounts, which are presented in such a way as to appear as if they came directly from the user.

Under California law, the sitting judge says has deemed this illegal. Consequently, if you were a member of LinkedIn's "add connection" program between September 2011 and October 2014, you can submit a claim to get a payout.

# Project Status

## Looking Forward

Team Peer Feedback was Due Saturday 11/4

3b: Heuristic Evaluation Due Wednesday 11/8

3c: Usability Testing Check-In Due Friday 11/10

3d: Usability Testing Review Due Monday 11/13

3e: Digital Mockup Due Thursday 11/16

## Other Assignments

Reading 4 Due Saturday 11/11, Sooner is Better

Reading 5 Can Be Done Anytime, Sooner is Better

# Objectives

Be able to:

Describe why we use inspection-based methods

Given Nielsen's heuristics, be able to:

explain what each of them means

apply them to identify usability failures in an interface

Describe an effective heuristic evaluation process

Explain why the typical recommendation for heuristic evaluation is 3 to 5 independent evaluators

# Inspection-Based Methods

We have cut prototyping to its minimum

Sketches, storyboards, paper prototypes

Rapid exploration of potential ideas

But we need evaluation to guide improvement

Can become relatively slow and expensive

Study participants can be scarce

Can waste participants on obvious problems

# Inspection-Based Methods

Simulate study participants

Instead of actual participants, use inspection to quickly and cheaply identify likely problems

Inspection methods are rational, not empirical

Today we cover two complementary methods

Heuristic Evaluation

Cognitive Walkthrough

# Heuristic Evaluation

Developed by Jakob Nielsen

Helps find usability problems in a design

Not a method for “coming up with” a design

Small set of evaluators examine interface

Three to five evaluators

Independently check compliance with principles

Different evaluators will find different problems

Evaluators only communicate afterwards

Can perform on working interfaces or sketches

# Nielsen's 10 Heuristics

Too few unhelpful, too many overwhelming

“Be Good” versus thousands of detailed rules

Nielsen seeks to create a small set

Collects 249 usability problems

Collects 101 usability heuristics

Rates how well heuristics explain problems

Factor analysis to identify key heuristics

# Nielsen's 10 Heuristics

Visibility of system status

Match between system and the real world

User control and freedom

Consistency and standards

Error prevention

Recognition rather than recall

Flexibility and efficiency of use

Aesthetic and minimalist design

Help recognize, diagnose, and recover from errors

Help and documentation

# 1. Visibility

## Visibility of system status

The system should always keep people informed about what is going on, through appropriate feedback within reasonable time.

# 1. Visibility

## Visibility of system status

The system should always **keep people informed** about what is going on, through appropriate **feedback** within reasonable time.

Refers to both visibility of system status and providing appropriate feedback

Anytime a person is wondering what state the system is in, or the result of some action, this is a visibility violation.

## 2. Real World Match

Match between system and the real world

The system should speak a person's language, with words, phrases and concepts familiar to the person, rather than system-oriented terms. Follow real-world conventions, making information appear in a natural and logical order.

## 2. Real World Match

Match between system and the real world

The system should **speak a person's language,** with words, phrases and concepts familiar to the person, rather than **system-oriented terms.** Follow real-world conventions, making information appear in a **natural and logical order.**

Refers to word and language choice, mental model, metaphor, mapping, and sequencing

# 3. Control and Freedom

## User control and freedom

People often choose system functions by mistake and will need a clearly marked “emergency exit” to leave the unwanted state without having to go through an extended dialogue.

Support undo and redo.

# 3. User in Control

## User control and freedom

People often choose system functions by mistake and will need a clearly marked “emergency exit” to **leave the unwanted state** without having to go through an extended dialogue.

**Support undo and redo.**

Not just for navigation exits,  
but for getting out of any situation or state.

# 4. Consistency

## Consistency and standards

People should not have to wonder whether different words, situations, or actions mean the same thing.

Follow platform conventions.

# 4. Consistency

## Consistency and standards

People should not have to wonder whether different words, situations, or actions **mean the same thing.**

**Follow platform conventions.**

Internal consistency is consistency throughout the same product. External consistency is consistency with other products in its class.

# 5. Error Prevention

## Error prevention

Even better than good error messages is a careful design which prevents a problem from occurring in the first place. Either eliminate error-prone conditions or check for them and present people with a confirmation option before they commit to the action.

# 5. Error Prevention

## Error prevention

Even better than good error messages is a careful design which prevents a problem from occurring in the first place. Either eliminate error-prone conditions or check for them and present people with a confirmation option before they commit to the action.

Try to commit errors and see how they are handled. Could they have been prevented?

# 6. Recognition not Recall

## Recognition rather than recall

Minimize a person's memory load by making objects, actions, and options visible. A person should not have to remember information from one part of the dialogue to another. Instructions for use of the system should be visible or easily retrievable whenever appropriate.

# 6. Recognition not Recall

## Recognition rather than recall

Minimize a person's memory load by

making objects, actions, and options visible.

A person should not have to remember

information from one part of the dialogue to another. Instructions for use of the system should be visible or easily retrievable whenever appropriate.

People should never carry a memory load

# 6. Recognition not Recall

Addresses visibility of features and information

where to find things

Visibility addresses system status and feedback

what is going on

Problems with affordances may go here

hidden affordance: remember where to act

false affordance: remember it is a fake

# 7. Flexibility and Efficiency

## Flexibility and efficiency of use

Accelerators, while unseen by novices, may often speed up the interaction for experts such that the system can cater to both inexperienced and experienced use. Allow people to tailor frequent actions.

# 7. Flexibility and Efficiency

## Flexibility and efficiency of use

Accelerators, while unseen by novices, may often speed up the interaction for experts such that the system can cater to both inexperienced and experienced use.  
Allow people to tailor frequent actions.

Concerns anywhere users have repetitive actions that must be done manually. Also concerns allowing multiple ways to do things.

# 8. Aesthetic Design

## Aesthetic and minimalist design

Dialogues should not contain information which is irrelevant or rarely needed.

Every extra unit of information in a dialogue competes with the relevant units of information and diminishes their relative visibility.

# 8. Aesthetic Design

## Aesthetic and minimalist design

Dialogues should not contain information which is irrelevant or rarely needed.

Every extra unit of information in a dialogue competes with the relevant units of information and **diminishes their relative visibility.**

Not just about “ugliness”.

About clutter, overload of visual field, visual noise, distracting animations.

# 9. Error Recovery

Help users recognize, diagnose,  
and recover from errors

Error messages should be expressed in plain language (no codes), precisely indicate the problem, and constructively suggest a solution.

# 9. Error Recovery

Help users recognize, diagnose, and recover from errors

Error messages should be expressed in plain language (no codes), precisely indicate the problem, and constructively suggest a solution.

Error prevention is about preventing errors before they occur. This is about after they occur.

# 10. Help

## Help and documentation

Even though it is better if the system can be used without documentation, it may be necessary to provide help and documentation. Any such information should be easy to search, focused on a person's task, list concrete steps to be carried out, and not be too large.

# 10. Help

## Help and documentation

Even though it is better if the system can be used without documentation, it may be necessary to provide help and documentation. Any such information should be easy to search, focused on a person's task, list concrete steps to be carried out, and not be too large.

This does not mean that a person must be able to ask for help on every single item.

# Heuristic Evaluation Process

Evaluators go through interface several times

- Inspect various dialogue elements

- Compare with list of usability principles

Usability principles

- Nielsen's heuristics

- Supplementary list of category-specific heuristics  
(competitive analysis or testing existing products)

Use violations to redesign/fix problems

# Examples

Can't copy info from one window to another

violates “Minimize memory load” (H6)

fix: allow copying

Typography uses different fonts in 3 dialog boxes

violates “Consistency and standards” (H4)

slows users down

probably wouldn't be found by usability testing

fix: pick a single format for entire interface

# Heuristics

# Heuristics

Time Left: 00:00:19

46%

# Heuristics

Time Left: 00:00:19

Searching database for matches

46%

# Heuristics

## Visibility of system status

pay attention to response time

0.1 sec: no special indicators needed (why?)

1.0 sec: person tends to lose track of data

10 sec: maximum duration if person to stay focused  
longer delays require progress bars

# Heuristics

# Heuristics

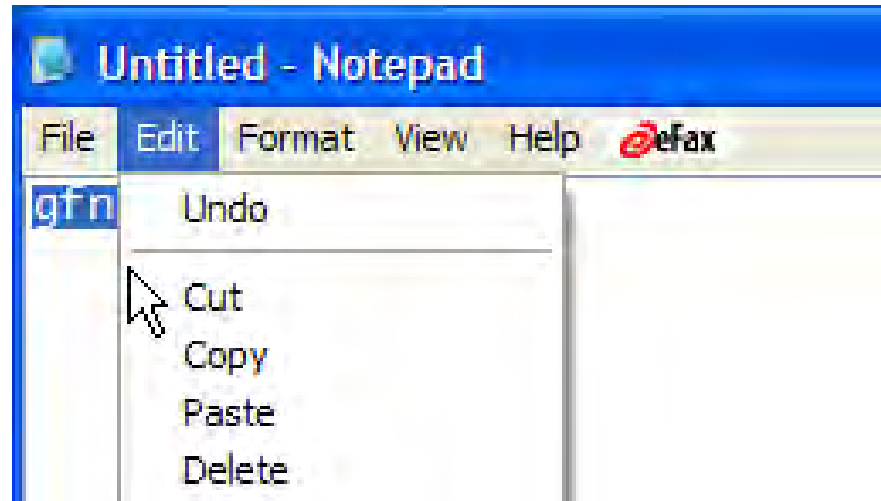

“Mailto”, “protocol”?

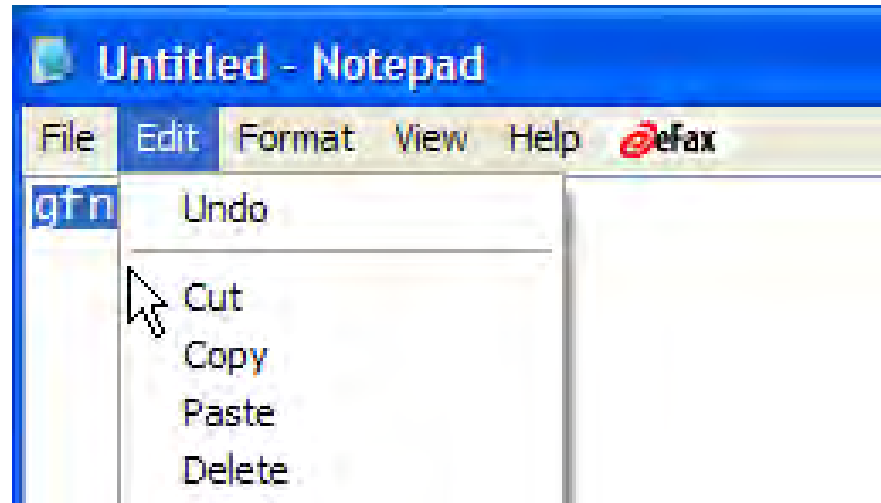

Match system to real world

Speak the person's language

# Heuristics

# Heuristics

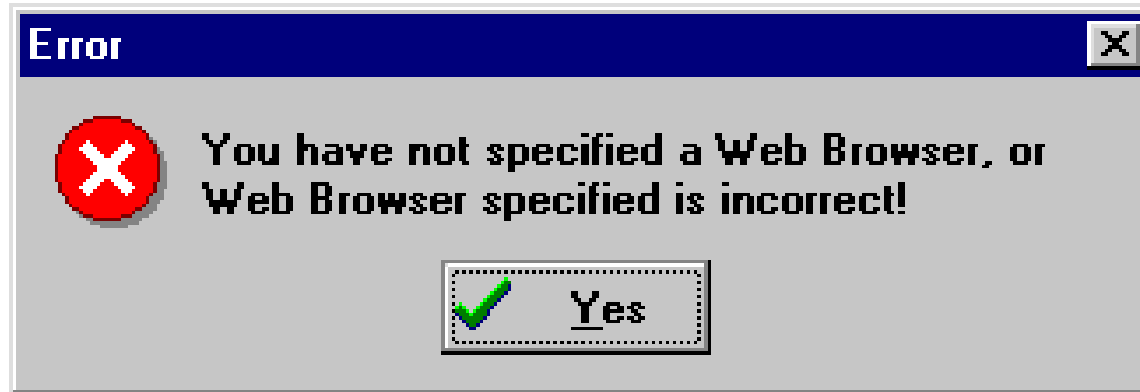

## Flexibility and Efficiency of Use

accelerators for experts (e.g., keyboard shortcuts)

allow tailoring of frequent actions (e.g., macros)

The screenshot displays the Chase Ultimate Rewards website interface. At the top, the navigation bar includes "My Chase Accounts", "Manage Ultimate Rewards", "Help", and "Log Off". The main header features the Chase logo and the "UR ultimate rewards" branding. Below this, a navigation menu lists "Rewards Home", "Travel", "Experiences", "Merchandise", "Gift Cards", "Cash Back", "Earn Faster", and "Spotlight". A status bar indicates "Your rewards balance is 25,601 Points" and includes a search bar for "All Rewards".

The central content area is titled "Featured Experiences & Auctions". It features a large banner for a "Five-Night Vacation to Rome for Two" auction, with an opening bid of 128,575 points. Below the banner, there are three columns of experience categories: "Culinary & Wine", "Sports & Leisure", and "Art & Entertainment". Each category lists several items with their respective point values.

On the left side, there is a "Quick Search" section with dropdown menus for "City" (set to "All Cities") and "Category" (set to "All Categories"), along with "From" and "To" date pickers and a "Search" button. Below this, a "Gift Ideas" section lists items like "Cook up Sweet Chocolate Creations" (43,400 points or \$434 on your Chase Card) and "Private Photography Lesson" (Current Bid: 12,519 points).

At the bottom, a "Featured Experiences" section highlights "Ride shotgun in a dragster at Brainerd International Raceway" (\$184 or 18400 points) and "Dance and dine on a Washington, D.C. dinner cruise for two" (\$249 or 24900 points). A "How It Works" section explains the auction and redemption processes, and a "FAQs" link is provided.

At the very bottom of the browser window, a status bar reads "Transferring data from ultimaterewardsit.chase.com...".

# How to Perform Heuristic Evaluation

At least two passes for each evaluator

- first to get feel for flow and scope of system

- second to focus on specific elements

If system is walk-up-and-use or evaluators are domain experts, no assistance needed

- otherwise might supply evaluators with scenarios

Each evaluator produces list of problems

- explain why with reference to heuristic

- be specific & list each problem separately

# Example Heuristic Violation

## 1. [H4 Consistency]

The interface used the string "Save" on the first screen for saving the person's file, but used the string "Write file" on the second screen. People may be confused by this different terminology for the same function.

# How to Perform Heuristic Evaluation

Why separate listings for each violation?

risk of a 'fix' repeating some problematic aspect  
may not be possible to fix all problems

Where problems may be found

single location in interface

two or more locations that need to be compared

problem with overall structure of interface

something that is missing

common problem with paper prototypes, but sometimes features are implied and just not yet "implemented"

# Phases of Heuristic Evaluation

## 1) Pre-evaluation training

give expert evaluators needed  
domain knowledge & information on the scenario

## 2) Evaluation

individuals evaluate interface  
and make lists of problems

## 3) Severity rating

determine how severe each problem is

## 4) Aggregation

group meets and aggregates problems (w/ ratings)

## 5) Debriefing

discuss the outcome with design team

# Severity Rating

Used to allocate resources to fix problems

Estimates of need for more usability efforts

Combination of

frequency

impact

persistence (one time or repeating)

Should be calculated after all evaluations are in

Should be done independently by all judges

# Severity Rating

0 - Do not agree this is a problem.

1 - Usability blemish.

Mild annoyance or cosmetic problem. Easily avoidable.

2 - Minor usability problem.

Annoying, misleading, unclear, confusing.

Can be avoided or easily learned. May occur only once.

3 - Major usability problem.

Prevents people from completing tasks. Highly confusing or unclear. Difficult to avoid. Likely to occur more than once.

4 - Critical usability problem.

People will not be able to accomplish their goals.

People may quit using system all together.

# Example Heuristic Violation

## 1. [H4 Consistency] [Severity 3]

The interface used the string "Save" on the first screen for saving the person's file, but used the string "Write file" on the second screen. People may be confused by this different terminology for the same function.

# Why Multiple Evaluators?

Every evaluator does not find every problem

Good evaluators find both easy & hard ones

# Debriefing

Conduct with evaluators, observers,  
and development team members

Discuss general characteristics of interface

Suggest potential improvements to address  
major usability problems

Development team rates how hard to fix

Make it a brainstorming session

# Fixability Scores

- 1 - Nearly impossible to fix. Requires massive re-engineering or use of new technology. Solution not known or understood at all.
- 2 - Difficult to fix. Redesign and re-engineering required. Significant code changes. Solution identifiable but details not fully understood.
- 3 - Easy to fix. Minimal redesign and straightforward code changes. Solution known and understood.
- 4 - Trivial to fix. Textual changes and cosmetic changes. Minor code tweaking.

# Example Heuristic Violation

## 1. [H4 Consistency] [Severity 3] [Fix 4]

The interface used the string "Save" on the first screen for saving the person's file, but used the string "Write file" on the second screen. People may be confused by this different terminology for the same function.

Fix: Change second screen to "Save".

# Results of Using HE

Discount: benefit-cost ratio of 48

cost was \$10,500 for benefit of \$500,000

how might we calculate this value?

in-house → productivity; open market → sales

Single evaluator achieves poor results

only finds 35% of usability problems

5 evaluators find ~ 75% of usability problems

why not more evaluators?

# Decreasing Returns

problems found

benefits / cost

# Alternative Inspection-Based Methods

## Cognitive Walkthrough

Surfaces different types of usability problems

Consider as a complement to heuristic evaluation

## Action Analysis

Low-level modeling of expert performance

Be aware of GOMS, but may never encounter it

# Cognitive Walkthrough

Evaluation method based on:

A person works through an interface in an exploratory manner

A person has goals

The person is applying means-ends reasoning to work out how to accomplish these goals

Evaluation by an expert, who goes through a task while simulating this cognitive process

# Preparation: Need Four Things

- 1) Person description, including level of experience and any assumptions made by the designer
- 2) System description (e.g., paper prototype)
- 3) Task description, specifying the task the expert has to carry out, from a person's point of view
- 4) Action sequence describing the system display and the actions needed to complete the task. One system display and one action together are one step.

# Cognitive Walkthrough Process

Designer/Developer prepares the required documents described on previous slide

Gives these documents to the usability expert

Expert reads the descriptions,  
carries out the task by following the action list

At each step in action list, asks four questions

Record problems similar to heuristic evaluation

# Believability

- 1) Will the person be trying to produce whatever effect the action has?
- 2) Will the person be able to notice that the correct action is available?
- 3) Once the person finds the correct action at the interface, will they know that it is the right one for the effect they are trying to produce?
- 4) After the action is taken, will the person understand the feedback given?

# Action Analysis / Cognitive Modeling

GOMS: Goals, Operators, Methods, Selection

Developed by Card, Moran and Newell

Walk through sequence of steps

Assign each an approximate time duration

Sum to estimate overall performance time

1. Select sentence		
Reach for mouse	H	0.40
Point to first word	P	1.10
Click button down	K	0.60
Drag to last word	P	1.20
Release	K	0.60
		3.90 secs

# Inspection vs. Usability Testing

## Inspection

- Is much faster

- Does not require interpreting participant actions

- May miss problems or find false positives

## Usability testing

- More accurate, by definition

- Account for actual people and tasks

One approach is to alternate between them

- Find different problems, conserve participants

# CSE 440: Introduction to HCI

User Interface Design, Prototyping, and Evaluation

Lecture 11:  
Inspection

Tuesday / Thursday  
12:00 to 1:20

James Fogarty  
Kailey Chan  
Dhruv Jain  
Nigini Oliveira  
Chris Seeds  
Jihoon Suh

# Phases of Heuristic Evaluation

## 1) Pre-evaluation training

give expert evaluators needed  
domain knowledge & information on the scenario

## 2) Evaluation

individuals evaluate interface  
and make lists of problems

## 3) Severity rating

determine how severe each problem is

## 4) Aggregation

group meets and aggregates problems (w/ ratings)

## 5) Debriefing

discuss the outcome with design team

# CSE 440: Introduction to HCI

## Looking Forward

3c: Usability Testing Check-In Due Friday 11/10

3d: Usability Testing Review Due Monday 11/13

3e: Digital Mockup Due Thursday 11/16

## Other Assignments

Reading 4 Due Saturday 11/11, Sooner is Better

Reading 5 Can Be Done Anytime, Sooner is Better

# Objectives

Be able to:

Describe an interaction in terms of a model, such as Norman's Execution-Evaluation Cycle or Buxton's 3-State Model

Describe properties of the human perceptual system that impact interaction

Use the Model Human Processor to describe simple human performance phenomena

Describe what Fitts's Law models, how terms in the model impact interaction, how the model can be used in low-level and higher-level interaction design

Describe the Gestalt perspective on human perception

# These are Examples of What?

Popsicle-stick bridge

$$x = x_0 + v_0 t + \frac{1}{2} a t^2$$

ACT-R

Goffman's Negotiated Approach

Norman's Execution-Evaluation Cycle

# Models

We have said models describe phenomena, isolating components and allowing a closer look

Today is a closer look at modeling humans

## Capture essential pieces

Model should have what it needs but no more  
Thus avoid underfitting or overfitting model

## Allow us to measure

Collect data, put in model, compare model terms

## Allow us to predict

The better the model, the better the predictions

# Models of Interaction

Models of interaction allow a closer look

- Define and describe an interaction

- Isolate areas where problems occur

- Design new interaction

Two examples at different scales

- Norman's Execution-Evaluation Cycle

- Buxton's 3-State Model

# Models of Interaction

Models of interaction allow a closer look

- Define and describe an interaction

- Isolate areas where problems occur

- Design new interaction

Two examples at different scales

- Norman's Execution-Evaluation Cycle

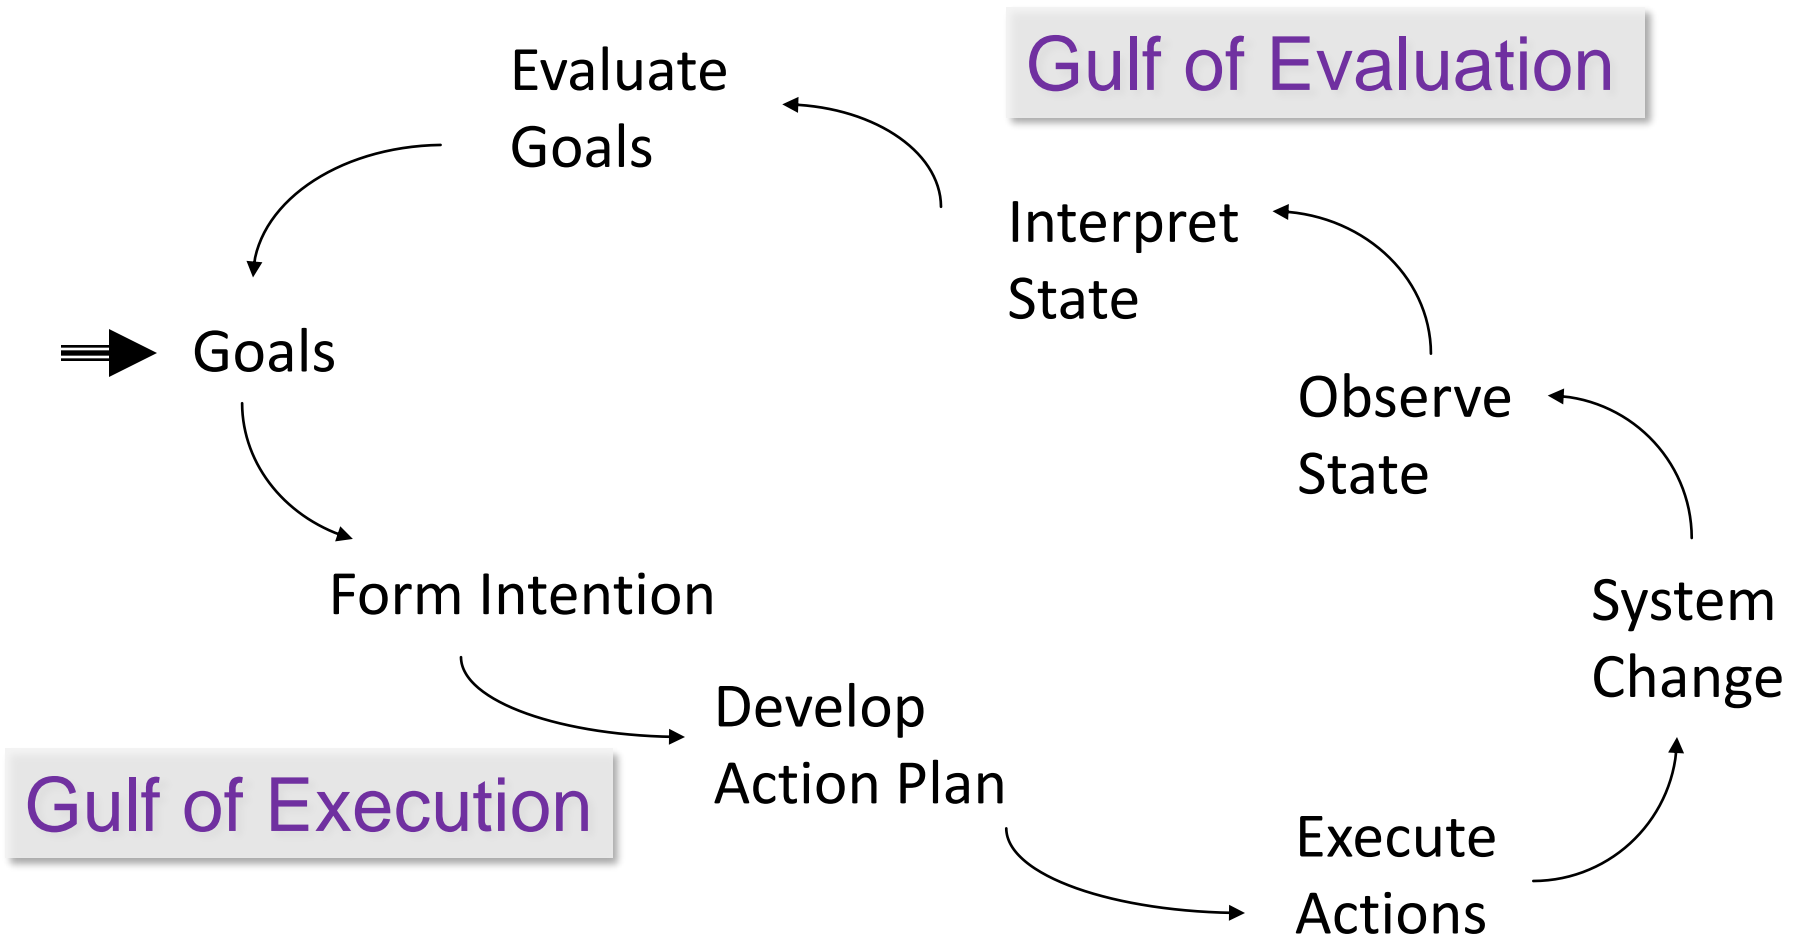

- Buxton's 3-State Model

“All models are wrong, but some are useful”

## Touch Screen

Which can support tooltip previews?

# Creating a Model

How would you go about creating a model?

# Creating a Model

How would you go about creating a model?

One approach:

Observe, Collect Data, Find Patterns,  
Draw Analogies, Devise Model,  
Test Fit to Data, Test Predictions, Revise

Fundamentally an inductive process

From specific observations  
to broader generalization

# Today

Visual System

Model Human Processor

Fitts's Law

Gestalt Principles

Biological Model

Higher-Level Model

Model by Analogy

Predict Interpretation

# Human Visual System

Light passes through lens, focused on retina

Blind Spot?

# Blind Spot

---

a b c d e f g h  
i j k l m n o p  
q r s t u v w x

# Blind Spot

Use left eye, look at cross

# Visible Spectrum

# Retina

Covered with light-sensitive receptors

## Rods (120 million)

- Sensitive to broad spectrum of light

- Sensitive to small amounts of light

- Cannot discriminate between colors

- Sense intensity or shades of gray

- Primarily for night vision & perceiving movement

## Cones (6 million)

- Used to sense color

# Retina

Center of retina has most of the ...

# Retina

Center of retina has most of the cones

Allows for high acuity of objects focused at center

# Retina

Center of retina has most of the cones

Allows for high acuity of objects focused at center

Edge of retina is dominated by ...

# Retina

Center of retina has most of the cones

Allows for high acuity of objects focused at center

Edge of retina is dominated by rods

Allows detecting motion of threats in periphery

# Retina

Center of retina has most of the cones

Allows for high acuity of objects focused at center

Edge of retina is dominated by rods

Allows detecting motion of threats in periphery

What does that mean for you?

# Retina

Center of retina has most of the cones

Allows for high acuity of objects focused at center

Edge of retina is dominated by rods

Allows detecting motion of threats in periphery

What does that mean for you?

Peripheral movement is easily distracting

# Retina

Center of retina has most of the cones

Allows for high acuity of objects focused at center

Edge of retina is dominated by rods

Allows detecting motion of threats in periphery

What does that mean for you?

Peripheral movement is easily distracting

# Color Perception via Cones

Photopigments used to sense color

3 types: blue, green, “red” (actually yellow)

Each sensitive to different band of spectrum

Ratio of neural activity stimulation for the three types of gives us a continuous perception of color

# Color Sensitivity

# Distribution of Photopigments

Not distributed evenly

Mainly reds (64%), Very few blues (4%)

Insensitivity to short wavelengths (i.e., blue)

No blue cones in retina center

Fixation on small blue object yields  
“disappearance”

Lens yellows with age, absorbs short wavelengths

Sensitivity to blue is reduced even further

# Color Sensitivity & Image Detection

Most sensitive to center of spectrum

To be perceived as the same, blues and reds must be brighter than greens and yellows

Brightness determined mainly by red and green

$$Y = 0.3 \text{ Red} + 0.59 \text{ Green} + 0.11 \text{ Blue}$$

Shapes detected by finding edges

We use brightness and color difference

Implication

Blue edges and shapes are hard

# Color Sensitivity & Image Detection

Most sensitive to center of spectrum

To be perceived as the same, blues and reds must be brighter than greens and yellows

Brightness determined mainly by red and green

$$Y = 0.3 \text{ Red} + 0.59 \text{ Green} + 0.11 \text{ Blue}$$

Shapes detected by finding edges

We use brightness and color difference

Implication

Blue edges and shapes are hard

# Focus

Different wavelengths of light focused at different distances behind eye's lens

Constant refocusing causes fatigue

Saturated colors (i.e., pure colors) require more focusing than desaturated (i.e., pastels)

# Focus

Different wavelengths of light focused at different distances behind eye's lens

Constant refocusing causes fatigue

Saturated colors (i.e., pure colors) require more focusing than desaturated (i.e., pastels)

The Falklands Society

This hurts, why?

# Color Deficiency

Trouble discriminating colors

Affects about 9% of population

Two main types

Different photopigment response most common

Reduces capability to discern small color differences

Red-Green deficiency is best known

Lack of either green or red photopigment, cannot discriminate colors dependent on red and green

Also known as color blindness

# Red-Green Deficiency Test

# Dual / Redundant Encoding

Apples to Apples

Pandemic

# Dual / Redundant Encoding

# The Model Human Processor

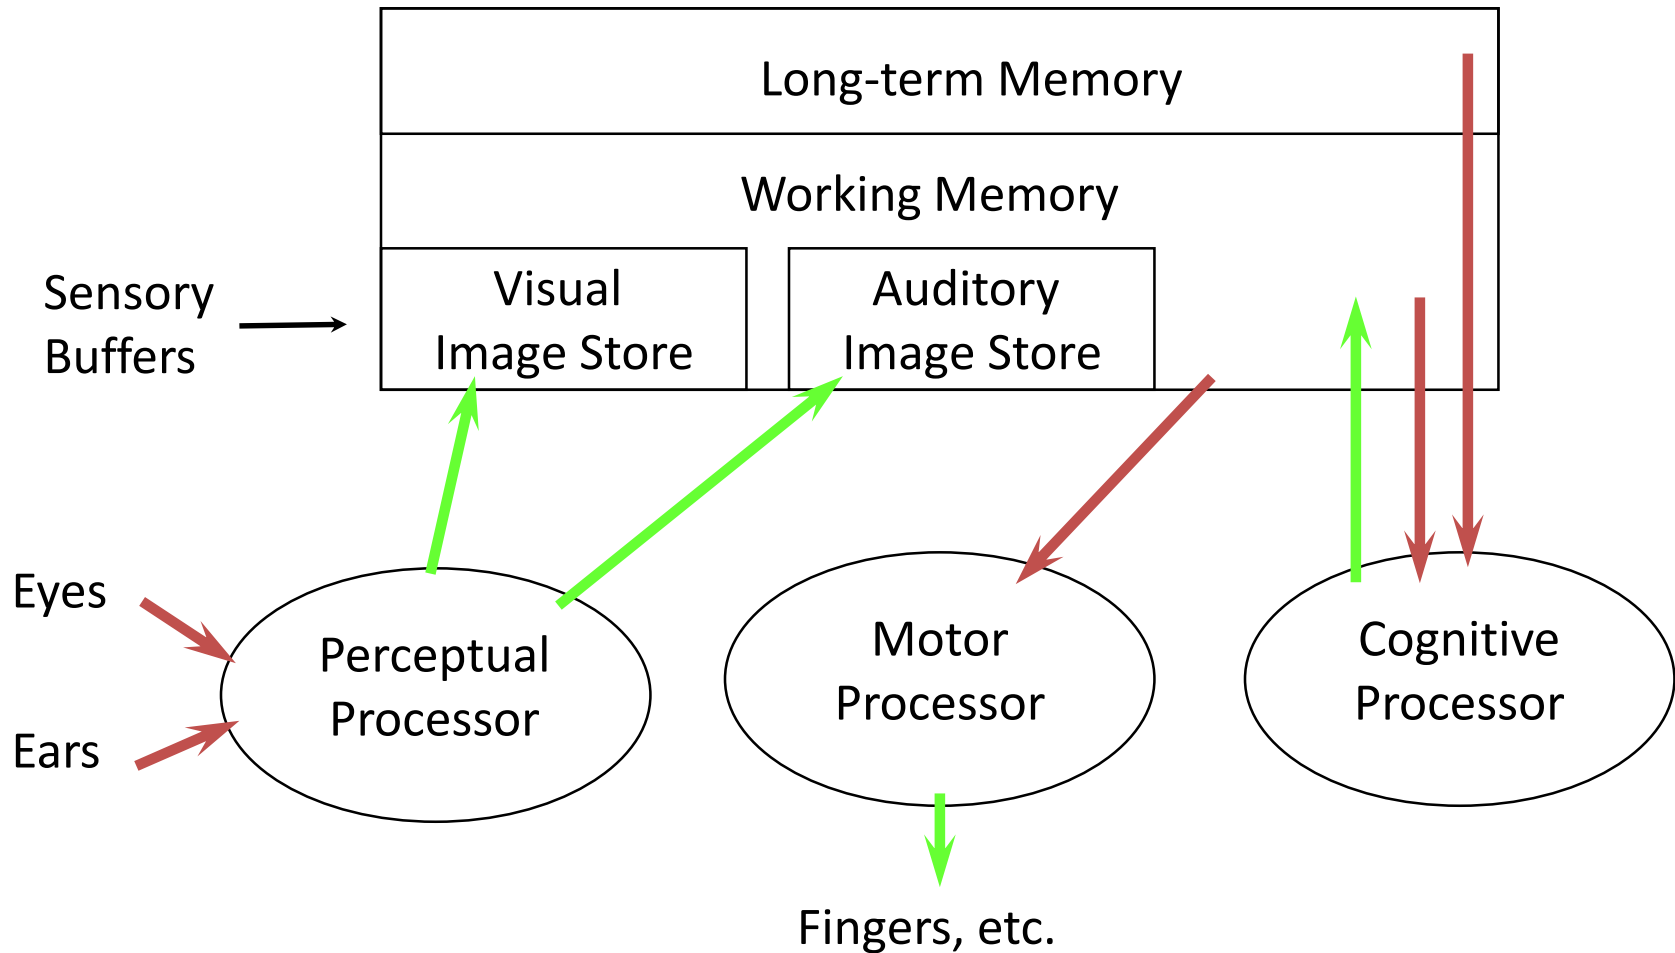

Developed by Card,  
Moran, & Newell (1983)

Based on empirical data

Summarizing human  
behavior in a manner easy  
to consume and act upon

Same book that named  
human computer  
interaction

# The Model Human Processor

# Basics of Model Human Processor

Sometimes serial, sometimes parallel

Serial in action and parallel in recognition

Pressing key in response to light

Driving, reading signs, hearing all simultaneously

## Parameters

Processors have cycle time, about 100-200ms

Memories have capacity, decay time, and type

# A Working Memory Experiment

BMCIACSEI

BM CIA CSE I

IBM CIA CSE

# Memory

Working memory (also known as short-term)

Small capacity ( $7 \pm 2$  “chunks”)

6174591765 vs. (617) 459-1765

IBMCIACSE vs. IBM CIA CSE

Rapid access ( $\sim 70$ ms) and decay ( $\sim 200$  ms)

Pass to LTM after a few seconds of continued storage

Long-term memory

Huge (if not “unlimited”)

Slower access time ( $\sim 100$  ms) with little decay

# Activation Experiment

# Model Human Processor Operation

## Recognize-Act Cycle of the Cognitive Processor

On each cycle, contents in working memory initiate actions associatively linked in long-term memory

Actions modify the contents of working memory

## Discrimination Principle

Retrieval is determined by candidates that exist in memory relative to retrieval cues

Interference created by strongly activated chunks

See also Freudian slips

# Perceptual Causality

How soon must the red ball move after cue ball collides with it?

# Perceptual Causality

Stimuli that occur within one cycle of the perceptual processor fuse into a single concept

## Requirement

If you want to create the perception of causality, then you need to be sufficiently responsive

## Caution

Two stimuli intended to be distinct can fuse if the first event appears to cause the other

Fitts's Law

Gestalt Principles

Biological Model

Higher-Level Model

Model by Analogy

Predict Interpretation

# Fitts's Law (1954)

Models time to acquire targets in aimed movement

Reaching for a control in a cockpit

Moving across a dashboard

Pulling defective items from a conveyor belt

Clicking on icons using a mouse

Very powerful, widely used

Holds for many circumstances (e.g., under water)

Allows for comparison among different experiments

Used both to measure and to predict

# Fitts's Law (1954)

Models time to acquire targets in aimed movement

Reaching for a control in a cockpit

Moving across a dashboard

Pulling defective items from a conveyor belt

Clicking on icons using a mouse

Very powerful, widely used

Holds for many circumstances (e.g., under water)

Allows for comparison among different experiments

Used both to measure and to predict

James's use of 's is correct,  
but most people say Fitts' Law

# Fitts's Law (1954)

Models time to acquire targets in aimed movement

Reaching for a control in a cockpit

Moving across a dashboard

Pulling defective items from a conveyor belt

Clicking on icons using a mouse

Very powerful, widely used

Holds for many circumstances (e.g., under water)

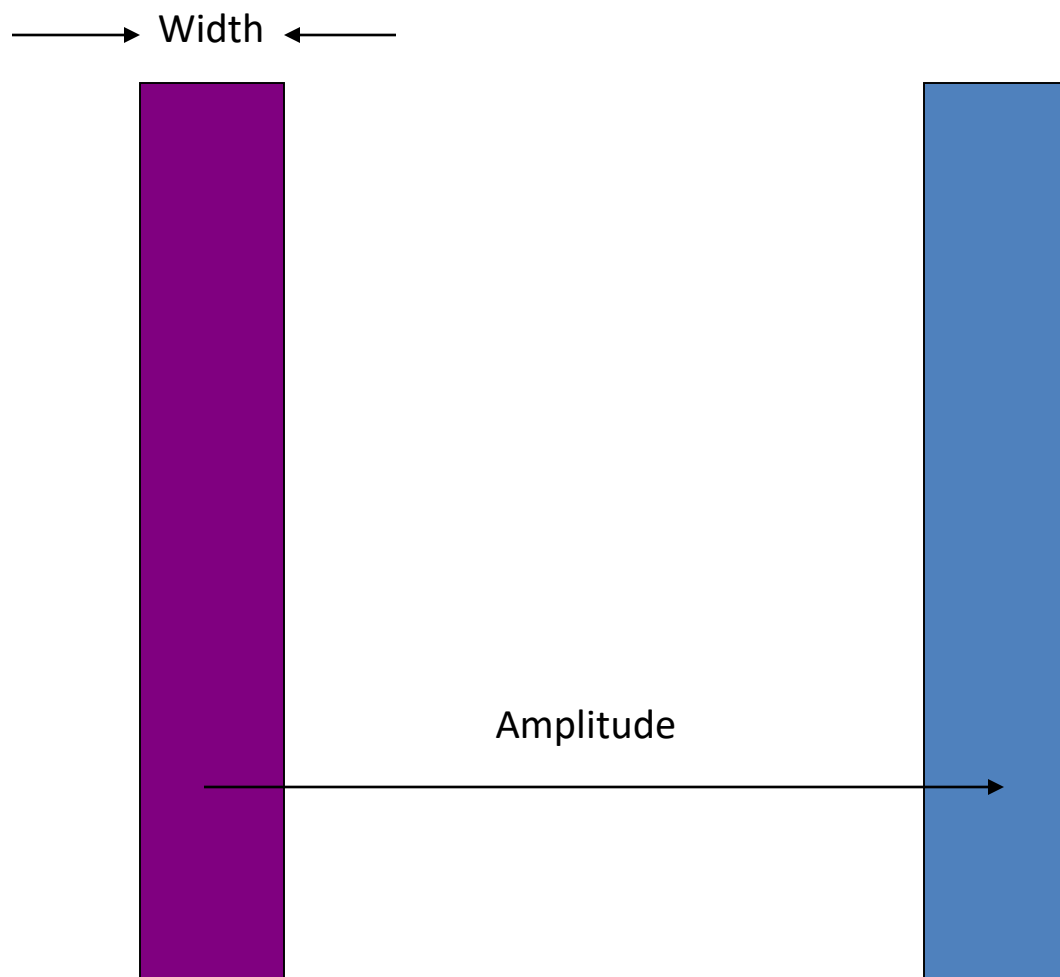

Allows for comparison among different experiments

Used both to measure and to predict

# Reciprocal Point-Select Task

# Closed Loop versus Open Loop

What is closed loop motion?

What is open loop motion?

# Closed Loop versus Open Loop

What is closed loop motion?

Rapid aimed movements with feedback correction

Fitts's law models this

What is open loop motion?

Ballistic movements without feedback correction

Example: Throwing a dart

See Schmidt's Law (1979)

# Model by Analogy

Analogy to Information Transmission  
Shannon and Weaver, 1959

# Model by Analogy

## The Interface

Your Knowledge

Analogy to Information Transmission  
Shannon and Weaver, 1959

# Fitts's Law

$$MT = a + b \log_2(A / W + 1)$$

What kind of equation does this remind you of?

# Fitts's Law

$$MT = a + b \log_2(A / W + 1)$$

What kind of equation does this remind you of?

$$y = mx + b$$

$$MT = a + bx, \text{ where } x = \log_2(A / W + 1)$$

x is called the Index of Difficulty (ID)

As "A" goes up, ID goes up

As "W" goes up, ID goes down

# Index of Difficulty (ID)

$$\log_2(A / W + 1)$$

Fitts's Law claims that the time to acquire a target increases linearly with the log of the ratio of the movement distance (A) to target width (W)

Why is it significant that it is a ratio?

# Index of Difficulty (ID)

$$\log_2(A / W + 1)$$

Fitts's Law claims that the time to acquire a target increases linearly with the log of the ratio of the movement distance (A) to target width (W)

Why is it significant that it is a ratio?

Units of A and W don't matter

Allows comparison across experiments

# Index of Difficulty (ID)

$$\log_2(A / W + 1)$$

Fitts's Law claims that the time to acquire a target increases linearly with the log of the ratio of the movement distance (A) to target width (W)

ID units typically in “bits”

Because of association with information capacity and somewhat arbitrary use of base-2 logarithm

# Index of Performance (IP)

$$MT = a + b \log_2(A / W + 1)$$

b is slope

1/b is called Index of Performance (IP)

If MT is in seconds, IP is in bits/second

Also called “throughput” or “bandwidth”

Consistent with analogy of the interaction as an information channel from human to target

# A Fitts's Law Experiment

# Model-View-Controller

How to organize the code of an interface?

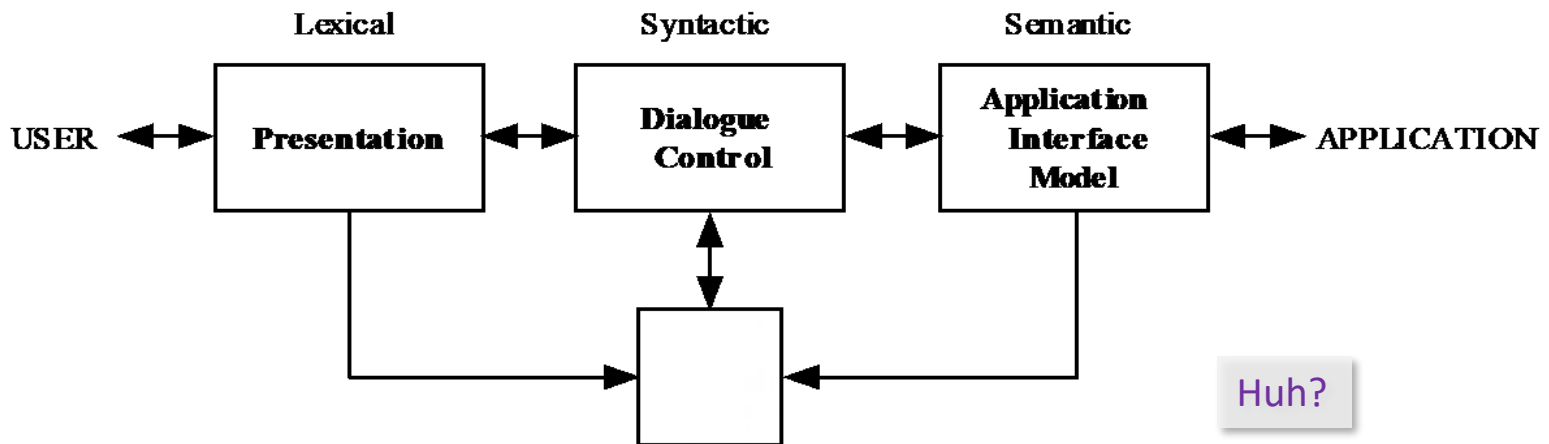

This is a surprisingly complicated question, with unstated assumptions requiring significant background to understand and resolve

# Seeheim Model

Buxton, 1983

<http://dx.doi.org/10.1145/988584.988586>

Results from 1985 workshop on user interface management systems, driven by goals of portability and modifiability, based in separating the interface from application functionality

# Seeheim Model

## Lexical - Presentation

External presentation of interface

e.g., “add” vs. “append” vs. “^a” vs. 

Generates the display, receive input

e.g., how to make a “menu” or “button”

## Syntactic - Dialog Control

Parsing of tokens into syntax

e.g., three-state model, interface modes

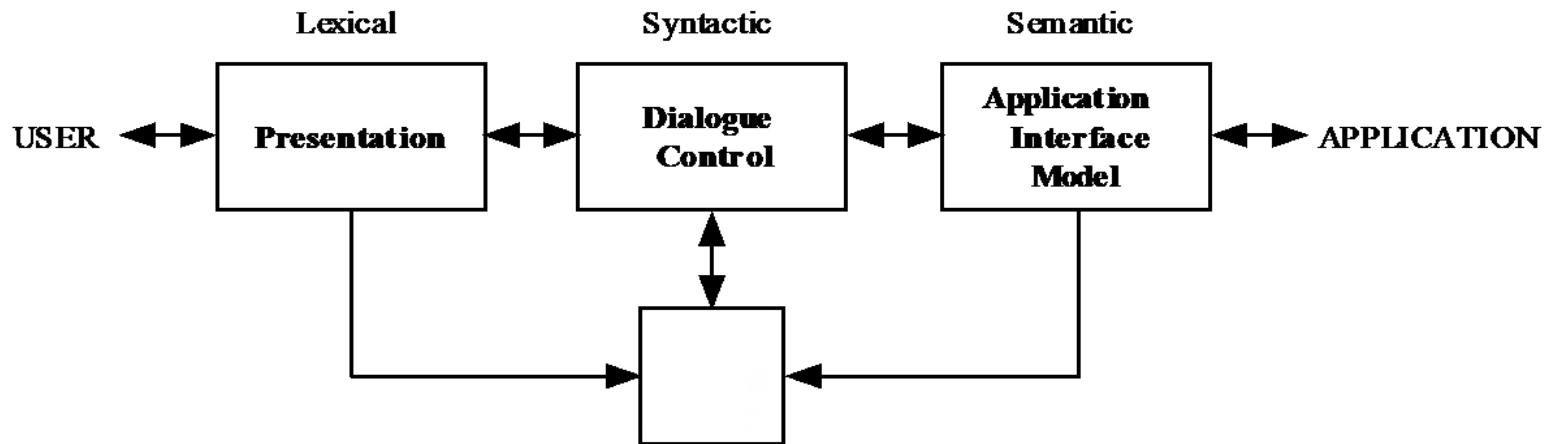

Maintain state

## Semantic - Application Interface Model

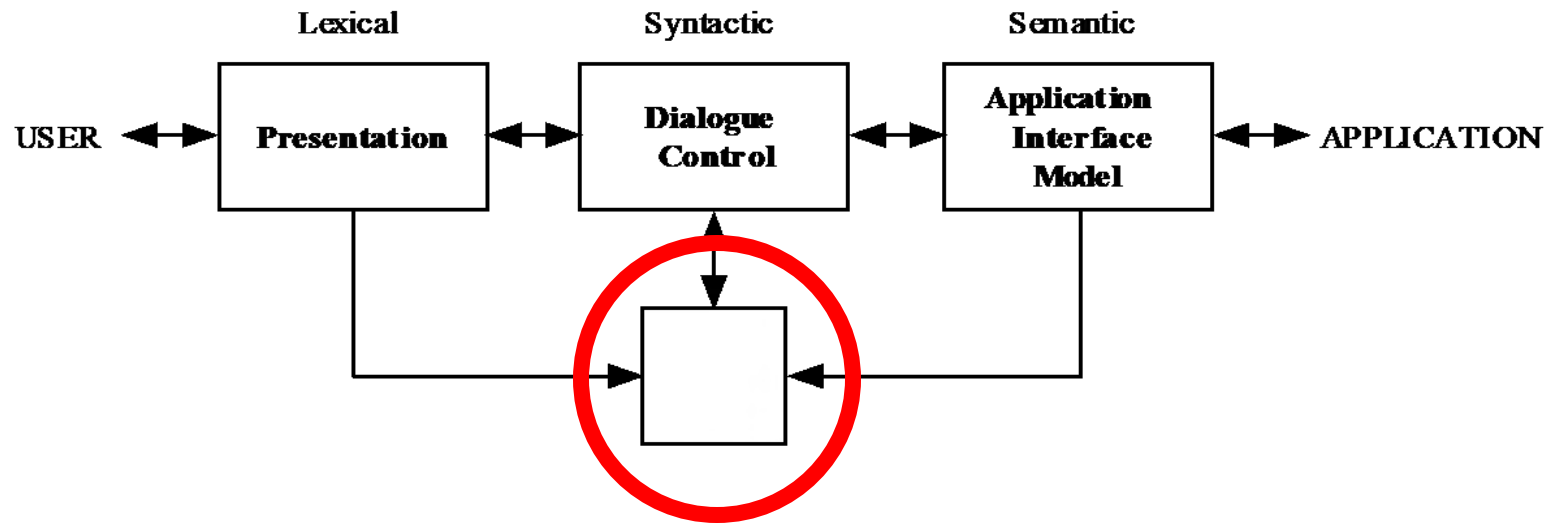

Defines interaction between interface and rest of software

e.g., drag-and-drop target highlighting

# Seeheim Model

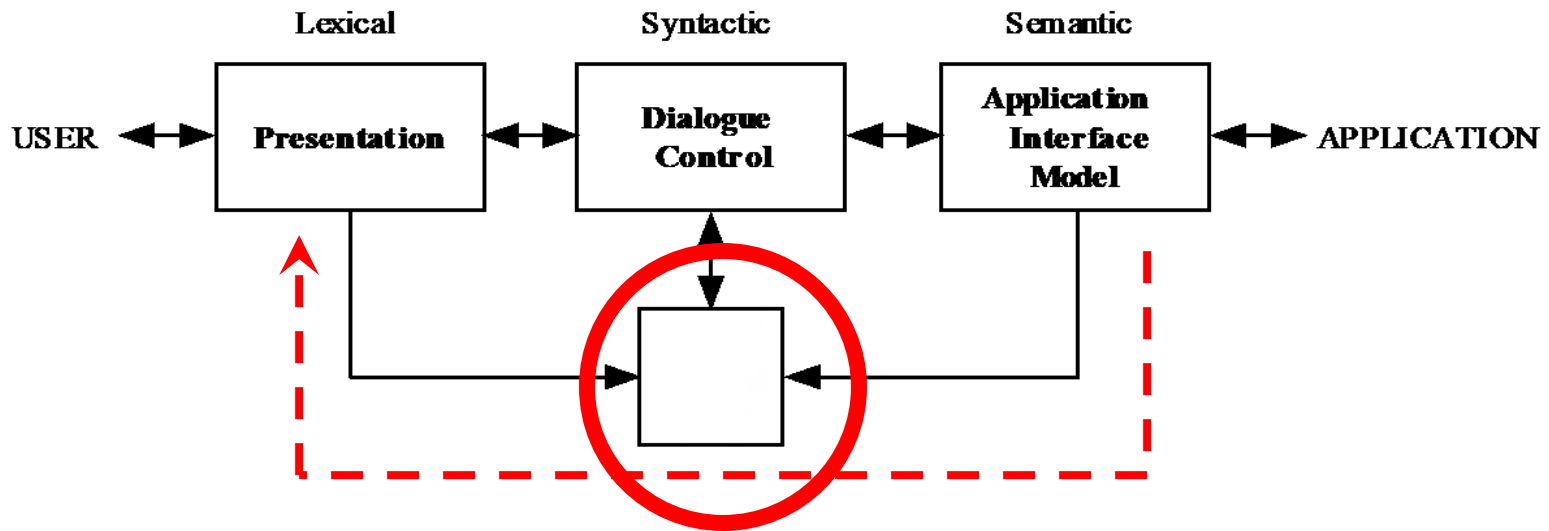

# Seeheim Model

Huh?

# Seeheim Model

## Rapid Semantic Feedback

In practice, all of the code goes in here

# Model-View-Controller

Introduced by Smalltalk developers at PARC

Partitions application to be scalable, maintainable

# View / Controller Relationship

In theory:

Pattern of behavior in response to input events (i.e., concerns of the controller) are independent of visual geometry (i.e., concerns of the view)

Controller contacts view to interpret what input events mean in context of a view (e.g., selection)

# View / Controller Relationship

In practice:

View and controller often tightly intertwined, almost always occur in matched pairs

Many architectures combine into a single class

# Model-View-Controller

MVC separates concerns and scales better than global variables or putting everything together

Separation eases maintenance

Can add new fields to model,  
new views can leverage, old views will still work

Can replace model without changing views

Separation of “business logic” can require care

May help to think of model as the client model

# Model-View-Collection on the Web

Core ideas manifest differently according to needs

For example, backbone.js implements client views of models, with REST API calls to web server

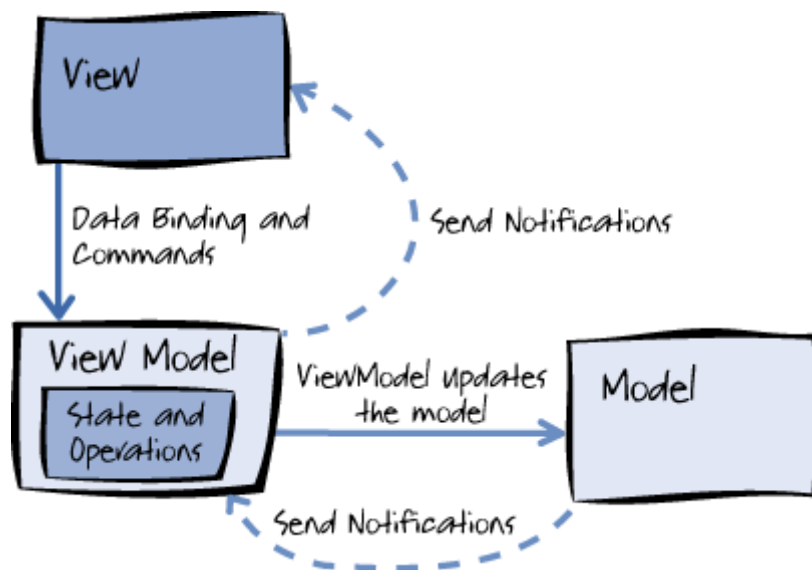

Web tools often implement views as templates

# Model View View-Model

Design to support data-binding  
by minimizing functionality in view

Also allows greater separation of expertise

## Principles of Traditional Animation Applied to 3D Computer Animation

Lasseter, 1987

<http://dx.doi.org/10.1145/37402.37407>

### PRINCIPLES OF TRADITIONAL ANIMATION APPLIED TO 3D COMPUTER ANIMATION

John Lasseter  
Pixar  
San Rafael  
California

*"There is no particular mystery in animation... it's really very simple, and like anything that is simple, it is about the hardest thing in the world to do."* Bill Tytla at the Walt Disney Studio, June 28, 1937. [14]

#### ABSTRACT

This paper describes the basic principles of traditional 2D hand-drawn animation and their application to 3D computer animation. After describing how these principles evolved, the individual principles are detailed, addressing their meanings in 2D hand-drawn animation and their application to 3D computer animation. This should demonstrate the importance of these principles to quality 3D computer animation.

CR Categories and Subject Descriptors:

I.3.6 Computer Graphics: Methodology and Techniques - Interaction Techniques;  
I.3.7 Computer Graphics: Three-dimensional Graphics and Realism - Animation;  
J.5 Computer Applications: Arts and Humanities - Arts, fine and performing.

General Terms: Design, Human Factors.

Additional Keywords and Phrases: Animation Principles, Keyframe Animation, Squash and Stretch, Lasso Jr.

#### 1. INTRODUCTION

Early research in computer animation developed 2D animation techniques based on traditional animation. [7] Techniques such as storyboarding [11], keyframe animation, [4,5] subframe, [16,22] scan/paint, and multiplane backgrounds [17] attempted to apply the old animation process to the computer. As 3D computer animation research matured, more resources were devoted to image rendering than to animation. Because 3D computer animation uses 3D models instead of 2D drawings, fewer techniques from traditional animation were applied. Early 3D animation systems were script based [2], followed by a few spline-interpolated keyframe systems [23]. But those systems were developed by companies for internal use, and so very few traditionally trained animators found their way into 3D computer animation.

The last two years have seen the appearance of reliable, user friendly, keyframe animation systems from such companies as Wavefront Technologies Inc., [29] Alias Research Inc., [2] Abel Image Research [28], [1] Vertigo Systems Inc., [28] Symbolica Inc., [25] and others. These systems will enable people to produce more high quality computer animation. Unfortunately, these systems will also enable people to produce more bad computer animation.

Much of this bad animation will be due to unfamiliarity with the fundamental principles that have been used for hand-drawn character animation for over 50 years. Understanding these principles of traditional animation is essential to producing good computer animation. Such an understanding should also be important to the designers of the systems used by these animators.

In this paper, I will explain the fundamental principles of traditional animation and how they apply to 3D keyframe computer animation.

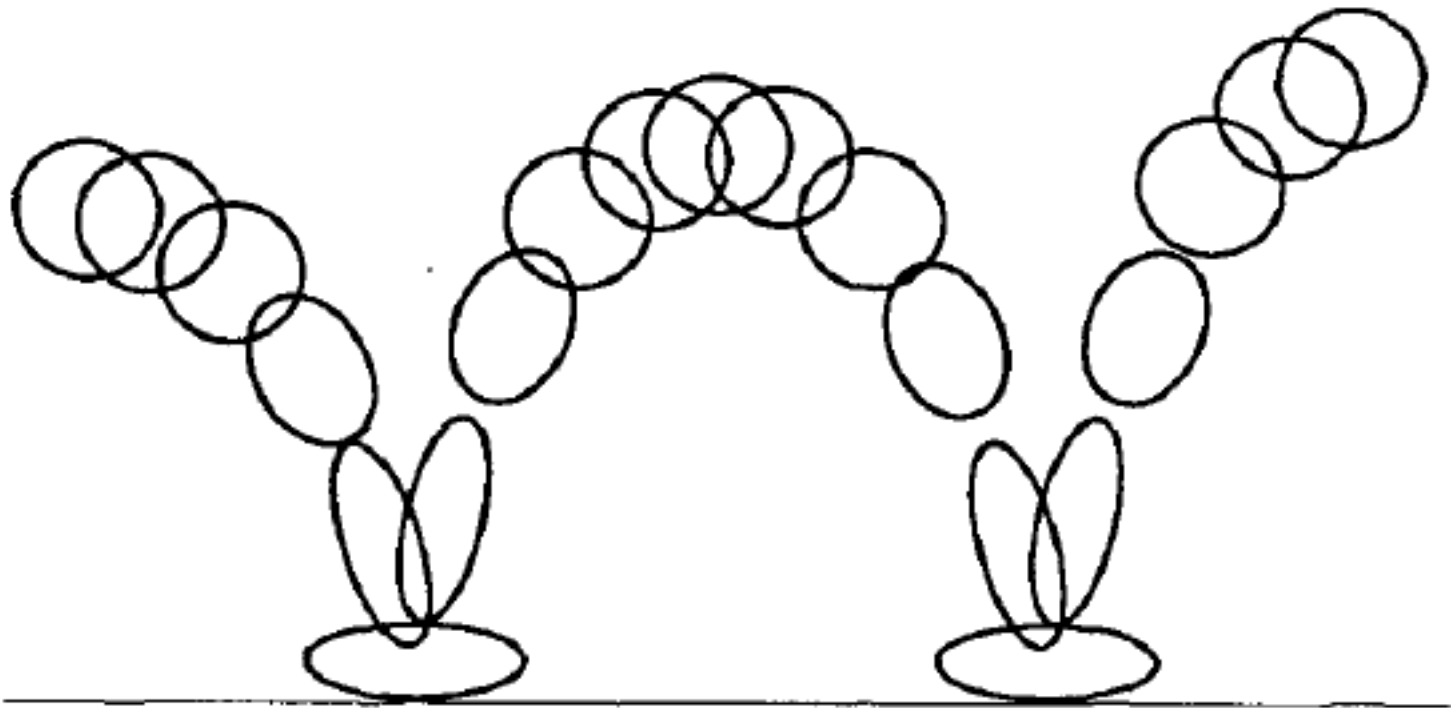

#### 2. PRINCIPLES OF ANIMATION

Between the late 1920's and the late 1930's animation grew from a novelty to an art form at the Walt Disney Studio. With every picture, actions became more convincing, and characters were emerging as true personalities. Audiences were enthralled and many of the animators were satisfied, however it was clear to Walt Disney that the level of animation and existing characters were not adequate to pursue new story lines- characters were limited to certain types of action and audience acceptance notwithstanding, they were not appealing to the eye. It was apparent to Walt Disney that no one could successfully animate a humanized figure or a life-like animal; a new drawing approach was necessary to improve the level of animation exemplified by the *Flower Child* Fig. 1 [10].

FIGURE 1. Lasso Jr.'s hop with overlapping action on cont. Flip pages from last page of paper to front. The top figures are frames 1-5, the bottom are frames 6-10.

# Squash and Stretch

# Squash and Stretch

# Squash and Stretch

FIGURE 4a. In slow action, an object's position overlaps from frame to frame which gives the action a smooth appearance to the eye.

FIGURE 4b. Strobing occurs in a faster action when the object's positions do not overlap and the eye perceives separate images.

FIGURE 4c. Stretching the object so that its positions overlap again will relieve the strobing effect.

# Timing

*Just two drawings of a head, the first showing it leaning toward the right shoulder and the second with it over on the left and its chin slightly raised, can be made to communicate a multitude of ideas, depending entirely on the Timing used. Each inbetween drawing added between these two "extremes" gives a new meaning to the action.*

*NO inbetweens..... The Character has been hit by a tremendous force. His head is nearly snapped off.*

*ONE inbetweens..... The Character has been hit by a brick, rolling pin, frying pan.*

*TWO inbetweens..... The Character has a nervous tic, a muscle spasm, an uncontrollable twitch.*

*THREE inbetweens..... The Character is dodging a brick, rolling pin, frying pan.*

# Timing

*FOUR inbetweens..... The Character is giving a crisp order, "Get going!" "Move it!"*

*FIVE inbetweens..... The Character is more friendly, "Over here." "Come on-hurry!"*

*SIX inbetweens..... The Character sees a good looking girl, or the sports car he has always wanted.*

*SEVEN inbetweens..... The Character tries to get a better look at something.*

# Timing

*EIGHT inbetweens..... The Character searches for the peanut butter on the kitchen shelf.*

*NINE inbetweens.....The Character appraises, considering thoughtfully.*

*TEN inbetweens..... The Character stretches a sore muscle.*

*You must learn to respect that golden atom, that single frame of action, that 1/24th of a second, because the difference between lightning and the lightning bug may hinge on that single frame.*

—Chuck Jones (10)

#### ABSTRACT

User interfaces are often based on static presentations, a model ill suited for conveying change. Consequently, events on the screen frequently startle and confuse users. Cartoon animation, in contrast, is exceedingly successful at engaging its audience; even the most bizarre events are easily comprehended. The Self user interface has served as a testbed for the application of cartoon animation techniques as a means of making the interface easier to understand and more pleasant to use. Attention to timing and transient detail allows Self objects to move solidly. Use of cartoon-style motion blur allows Self objects to move quickly and still maintain their comprehensibility. Self objects arrive and depart smoothly, without sudden materializations and disappearances, and they rise to the front of overlapping objects smoothly through the use of dissolve. Anticipating motion with a small contrary motion and pacing the middle of transitions faster than the endpoints results in smoother and clearer movements. Despite the differences between user interfaces and cartoons—cartoons are frivolous, passive entertainment and user interfaces are serious, interactive tools—cartoon animation has much to lead to user interfaces to realize both affective and cognitive benefits.

these tableaux, but less thought is given to the transitions between them. Visual changes in the user interface are sudden and often unexpected, surprising users and forcing them to mentally step away from their task in order to grapple with understanding what is happening in the interface itself.

When the user cannot visually track the changes occurring in the interface, the causal connection between the old state of the screen and the new state of the screen is not immediately clear. How are the objects now on the screen related to the ones which were there a moment ago? Are they the same objects, or have they been replaced by different objects? What changes are directly related to the user's actions, and which are incidental? To be able to efficiently and reliably interpret what has happened when the screen changes state, the user must be prepared with an expectation of what the screen will look like after the action. In the case of most interactions in unanimated interfaces, this expectation can only come by experience; little in the interface or the action gives the user a clue about what will happen, what is happening, or what just happened.

For example, the Microsoft Windows interface [15] expands an icon to a window by eliminating the icon and drawing the window in the next instant. In this case the first static presentation is the screen with the icon; the next is the screen with an expanded window. Much of the screen changes suddenly and without indication of the relationship between the old state and the new state. Current pop-up menus suffer from the same problem—one instant there is nothing there; the next instant a menu obscures part of the display.

Moving objects from one location to another is yet another example. Most current systems let the user move an outline of the object, and then, when the user is finished the move, the screen suddenly changes in two places: the object in the old location vanishes and the object appears in the new location. Sudden change, flash of the screen, no hint how the two states are related: the user must compare the current state and the preceding state and deduce the connection.

Users overcome obstacles like these by experience. The first few encounters are the worst; eventually users learn the behavior of the interface and come to interact with it efficiently. Yet while some of the cognitive load of

#### ABSTRACT

Animation can be a very effective mechanism to convey information in visualization and user interface settings. However, integrating animated presentations into user interfaces has typically been a difficult task since, to date, there has been little or no explicit support for animation in window systems or user interface toolkits. This paper describes how the Artkit user interface toolkit has been extended with new animation support abstractions designed to overcome this problem. These abstractions provide a powerful but convenient base for building a range of animations, supporting techniques such as simple motion-blur, "squash and stretch", use of arcing trajectories, anticipation and follow through, and "slow-in / slow-out" transitions. Because these abstractions are provided by the toolkit they are reusable and may be freely mixed with more conventional user interface techniques. In addition, the Artkit implementation of these abstractions is robust in the face of systems (such as the X Window System and Unix) which can be ill-behaved with respect to timing considerations.

**Keywords:** object-oriented user interface toolkits, window systems, animation techniques, dynamic interfaces, motion blur, real-time scheduling.

#### 1 INTRODUCTION

Human perceptual capabilities provide a substantial ability to quickly form and understand models of the world from moving images. As a result, in a well designed display, information can often be much more easily comprehended in a moving scene than in a single static image or even a sequence of static images. For example, the "cone tree" display described in [Robe93] provides a clear illustration that the use of continuous motion can allow much more information to be presented and understood more easily.

However, even though the potential benefits of animation in user interfaces have been recognized for some time ([Baec90] for example, surveys a number of uses for animation in the interface and cites their benefits and [Stask93] reviews principles for using animation in interfaces and describes a number of systems that make extensive use of animation in an interface), explicit support for animation is rarely, if ever, found in user interface support environments. The work described in this paper is designed to overcome this problem by showing how flexible, robust, and reusable support for animation can be incorporated into a full scale object-oriented user interface toolkit. Specifically, this paper describes how the extension mechanisms of Artkit — the Advanced Reusable Toolkit (supporting interfaces in C++) [Henr90] — have been employed to smoothly integrate animation support with other user interface capabilities.

The animation abstractions provided by the Artkit system are designed to be powerful and flexible — providing basic support that can be used to build a range of sophisticated techniques such as: simple motion-blur, "squash and stretch", use of arcing

Carnegie Mellon University,  
Pittsburgh, PA 15213 USA  
{johnny, fortizzi, scott.hudson}@cs.cmu.edu

#### ABSTRACT

*Kinetic typography* – text that uses movement or other temporal change – has recently emerged as a new form of communication. As we hope to illustrate in this paper, kinetic typography can be seen as bringing some of the expressive power of film – such as its ability to convey emotion, portray compelling characters, and visually direct attention – to the strong communicative properties of text. Although kinetic typography offers substantial promise for expressive communications, it has not been widely exploited outside a few limited application areas (most notably in TV advertising). One of the reasons for this has been the lack of tools directly supporting it, and the accompanying difficulty in creating dynamic text. This paper presents a first step in remedying this situation – an extensible and robust system for animating text in a wide variety of forms. By supporting an appropriate set of carefully factored abstractions, this engine provides a relatively small set of components that can be plugged together to create a wide range of different expressions. It provides new techniques for automating effects used in traditional cartoon animation, and provides specific support for typographic manipulations.

**KEYWORDS:** kinetic typography, dynamic text, time-based presentation, automating animation effects

#### INTRODUCTION

The written word is one of humanity's most powerful and significant inventions. For over 4000 years, its basic communicative purpose has not changed. However, the medium in which written communication is authored and presented has never stopped evolving. From cuneiform markings on clay tablets, to pen and parchment, to the Gutenberg press, to computers and the internet, technology has always provided text with new mediums to express itself. The explosion of available computing power has added a new possibility: *kinetic typography* – text that moves or otherwise changes over time.

Kinetic typography can be seen as a vehicle for adding some of the properties of film to that of text. For example, kinetic typography can be effective in conveying a speaker's tone of voice, qualities of character, and affective (emotional) qualities of text [Ford97]. It may also allow for a different kind of engagement with the viewer than static text, and in some cases, may explicitly direct or manipulate the attention of the viewer.

In fact, the first known use of kinetic typography appeared in film – specifically, Saul Bass' opening credit sequence for Hitchcock's *North by Northwest* [Bass59] and later *Psycho* [Bass60]. This work stemmed in part from a desire to have the opening credits set the stage for the film by establishing a mood, rather than simply conveying the information of the credits. Use of kinetic typography is now commonplace for this purpose, and is also very heavily used in TV advertising where its ability to convey emotive content and direct the user's attention is generally a good match to the goals of advertising. We believe that if it can be made accessible via good tools, the power of kinetic typography can also be applied to benefit other areas of digital communications.

A second origin for time-based presentation of text comes independently from psychological studies of perception and reading. For example, [Miller71] studies perceptual effects of a number of text presentations, such as scrolling text. One of the most fruitful of these is a method known as *Rapid Serial Visual Presentation* (RSVP), where text is displayed one word at a time in a fixed position [Fitts84]. Studies have shown that, because scanning eye movements are unnecessary when using RSVP, it can result in rapid reading without a need for special training. In addition, RSVP techniques provide advantages for designers because they allow words to be treated independently without regard to effects on adjacent text elements. Finally, RSVP can be seen as a means for trading time for space, potentially allowing large bodies of text to be shown at readable sizes on small displays.

Figures 1-3 illustrate some of the things that kinetic typography can do. (Please refer to the video proceedings for dynamic renditions of these figures.) Figure 1 shows two different renditions of the same words expressing a different emotional tone. As described by Ishizaki [Jsh97]

#### ABSTRACT

Sometimes users fail to notice a change that just took place on their display. For example, the user may have accidentally deleted an icon or a remote collaborator may have changed settings in a control panel. Animated transitions can help, but they force users to wait for the animation to complete. This can be cumbersome, especially in situations where users do not need an explanation. We propose a different approach. Phosphor objects show the outcome of their transition instantly; at the same time they explain their change in retrospect. Manipulating a phosphor slider, for example, leaves an afterglow that illustrates how the knob moved. The parallelism of instant outcome and explanation supports both types of users. Users who already understood the transition can continue interacting without delay; while those who are inexperienced or may have been distracted can take time to view the effects at their own pace. We present a framework of transition designs for widgets, icons, and objects in drawing programs. We evaluate phosphor objects in two user studies and report significant performance benefits for phosphor objects.

**ACM Classification:** H5.2 [Information interfaces and presentation] User Interfaces - Graphical user interfaces.

**General terms:** Design, Human Factors.

**Keywords:** Design, comic animation, cartoon animation, user interfaces, information visualization, diagrams.

#### INTRODUCTION

Computer users sometimes make mistakes, such as accidentally deleting an icon or filing it into the wrong folder. Similarly, unexpected things may occur in collaboration scenarios. Users trying to replicate a process demonstrated by a collaborator may later realize that they missed some of the steps. This is particularly difficult for actors that leave no trace, such as shortcut commands.

The potential changes that users need to keep track of continues to rise with increasing user interface complexity, more concurrently running applications, large screens where the user may be attending to the wrong location, and

the possibility of remote collaboration. Without knowing what changed and how it changed, users can find it hard to detect and correct unintended or unexpected actions.

Animated transitions have been proposed to help users understand changes in the user interface [9, 19] and have found their way into a range of products. *Windows Media Player 10*, for example, hides its play controls in fullscreen mode by slowly moving them off screen. While this can help users understand where the controls went and how to get them back, it also introduces “lag” into the interaction, i.e., it forces users to wait for the animation to complete. For experienced users who do not need an explanation, this forced pause can be cumbersome and may break their concentration.

Figure 1: These phosphor widgets use green afterglow effects to show how they have changed. The slider labeled “volume” was dragged all the way to the left. Two of the checkboxes in the next row were unchecked. The combo box was set from 1 to 2.

#### PHOSPHOR USER INTERFACE OBJECTS

We propose explaining user interface transitions without forcing users to wait. We define a *phosphor transition* as a transition that:

1. shows the outcome of the change *instantly* and
2. explains the change in retrospect using a diagrammatic depiction.

The space of retrospective diagrammatic descriptions encompasses a great number of possible designs. In this paper, we concentrate on a specific subset based on the notion of afterglow. Figure 1 shows an example. When a user op-

# Phosphor

Animation can help people follow interface transitions

But the right speed is crucial

Too fast increases error rate

Too slow increases task time

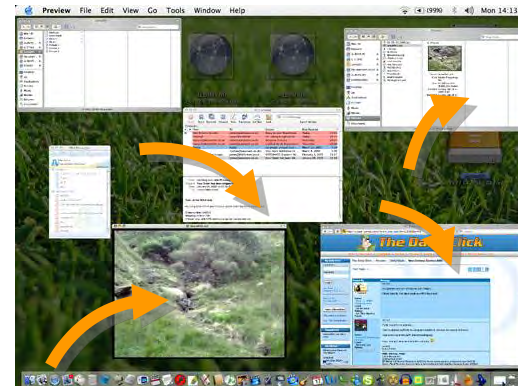

The right speed depends on familiarity, distraction, etc.

It cannot be determined

phosphor

# Challenging Assumptions of Tools

Phosphor breaks from the assumptions that have evolved into current transition tools

# Prefab

Prefab uses pixel analysis to modify existing applications from the outside, using only pixels

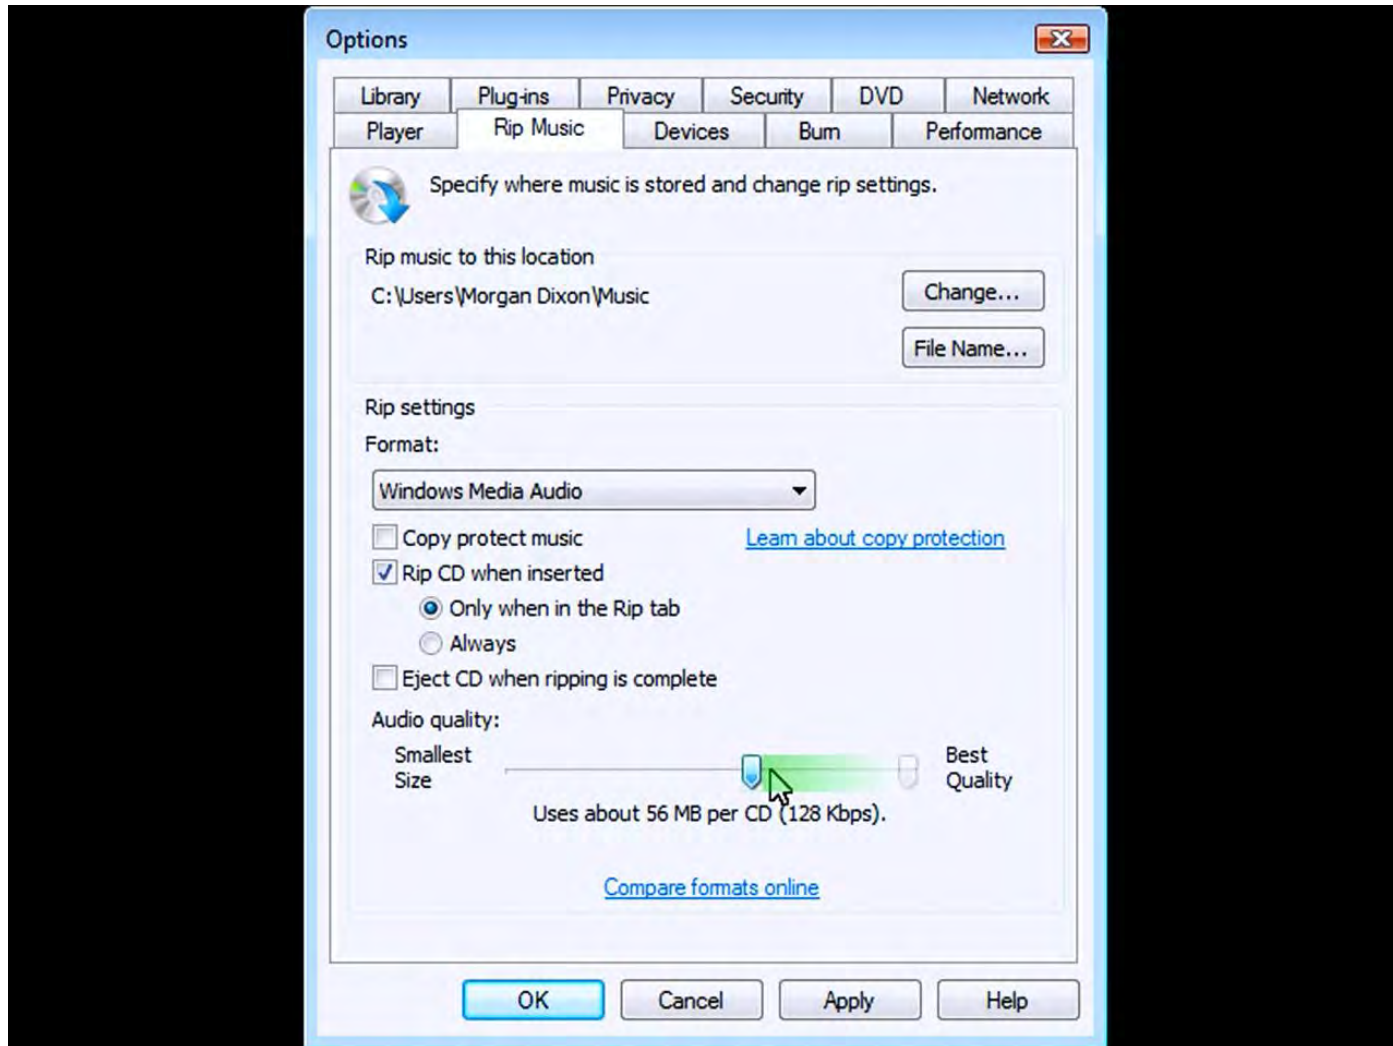

Prefab is informed by how toolkits work, but not linked to any particular toolkit implementation

Allows trying and fielding new ideas that are not supported by existing applications or toolkits

# Prefab

# Prefab

# Understanding Tools

Tools promote and encapsulate proven practices

Reduce expertise barriers

Enable more rapid and iterative implementation

Codification eventually constrains design

Inevitable consequence of codification versus evolving understanding of emerging technologies

Codification goes deeper than the code

Frames how we think about our applications

# Rebuilding the Language

We regularly rebuild the entire system

Command Line, Text Screens

Multiple Generations of Desktop

Multiple Generations of Web

Mobile Apps

We will do it again

Several near-term challenges require it

e.g., Touch, Cloud, Distributed Interfaces

Backward compatibility helps, but is not required

# Informing the Next Language

Research explores the next generation of language, while being limited by the current

We therefore conflate:

Ideas

Proof of Concept

Engineering

Implementation

Broken Metaphors

Unspeakably Dirty Hacks

# Informing the Next Language

Research explores the next generation of language, while being limited by the current

We therefore conflate:

Ideas

Proof of Concept

Engineering

# Unlock Journaling for Self-Report

# Unlock Journaling for Self-Report

Stanford Sleepiness Scale

# Unlock Journaling for Self-Report

Pleasure and Accomplishment  
(e.g., self-monitoring depressive symptoms)

# Unlock Journaling for Self-Report

Russell's Affect Grid

# Unlock Journaling vs. Notifications

Unlock journaling is:

rated less intrusive

(1.77 vs. 2.22 on a 5-point scale)

yields greater frequency

(15.0 vs. 9.8 per 12-hour day)

comparable timeliness

(8.6 vs. 9.3 minutes)

Instead of reminders to journal, unlock journaling makes the opportunity visible, easy, and optional

It should not have taken 10 years to get here

# Mobile Food Journals

Origins in daily recall

Self-monitoring of food can support many goals

Weight Loss

Diabetes Management

Trigger Identification

High burdens detract from potential benefit, data is often wrong

# Mobile Food Journals

Mobile devices provide real-time feedback

Search for each food in a large database, often breaking into components

Typically provide calorie-based feedback

High burdens detract from potential benefit, data is often wrong

# Perceptions of Healthy Eating

“What does healthy eating look like to you?”

Food types:

“vegetables”

“fruits”

“protein”

Food qualities:

“low processed”

“organic”

“fresh”

Diet qualities:

“balanced”

“variety”

“portion”

# Difficulty as a Negative Nudge

“I just avoided eating things that were hard to log” – SP132

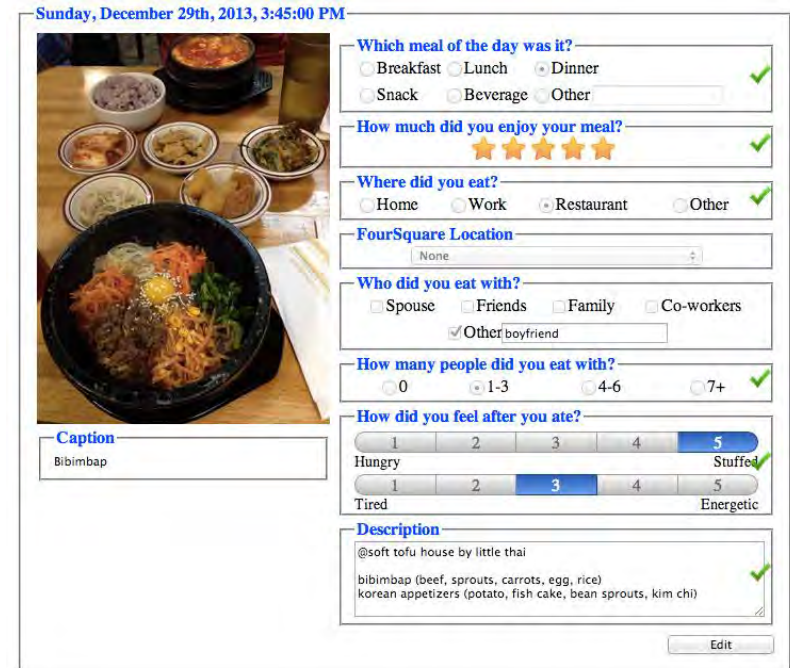

“Prepackaged meals were the easiest because of bar codes but those aren't healthy” – SP123

“I could make life easier by eating the same things regularly” – SP97

“It discourages you from eating out or at a friend's, even if it is healthy” – SP42

# Deploying a Photo-Based Journal

Mobile capture and review

Web review and annotation

# Leveling the Difficulty of Journaling

With prior techniques:

60% report not journaling  
because it was too difficult

65% report not journaling  
because they did not know

With photo-based capture:

22% report not journaling  
because it was too difficult

None report not journaling  
due to food knowledge

“For some meals, it’s just really easy to take a picture  
... than sit there and type in every ingredient” – FP20

# Journaling without Judgment

With prior journals, participants report choosing not to journal because they would exceed a calorie budget or because a food was unhealthy

13% of survey participants

45% of field participants

Photos enable mindfulness while avoiding judgment

“[it was] easier because there were no calorie counts, no judgments, but still makes you aware” – FP14

“Do I really want to eat this? I’m capturing this” – FP17

# Triggers and Trends

“I eat too much pizza” – FP10

“I’m surprised at how many times I’m seeing things that I consider an exception to my diet!” – FP4

“I don’t branch out as much as I thought I did, even when I go somewhere new, I kind of get what I always get somewhere else” – FP10

# Food Journals as Daily Recall

“it should be noted that much of the use of food journaling is in a more clinical setting with the purpose being sharing and evaluating the journal with nutritionists and care providers ...

it's not relevant if photos are more or less easily understood by the user if a nutritionist is the eventual consumer of the data”

– Actual Anonymous Grumpy R3

# Tools and Interfaces

Tools embody expertise and assumptions

Tools evolve based on emerging understanding of how to address categories of problems

Be conscious of your tool decisions

Try to think about designs before tying to a tool

Choose good and appropriate tools

Understand what you are getting in a tool

Push yourself to think outside the tool
