

CSE 440: Introduction to HCI

User Interface Design, Prototyping, and Evaluation

Lecture 14:
History

Tuesday / Thursday
12:00 to 1:20

James Fogarty
Kailey Chan
Dhruv Jain
Nigini Oliveira
Chris Seeds
Jihoon Suh

Exam

Tuesday 11/21,
in Denny 303

Mostly short answer,
some long answer

Content drawn from
lecture and readings

Compilation of the lecture slides is posted

Q&A Monday 11/20 at 3:00 in CSE 403

Project Status

Looking Forward

3e: Digital Mockup Due Tonight

3f: Report Due Monday 11/27

3g: Presentation Due Wednesday 11/29

4a: Initial Website Due Monday 11/27

4b: Video Prototype Due Monday 12/4

Other Assignments

Reading 5 Due Saturday 12/2, Sooner is Better

Denny 303 on Tuesday 11/21

Why do we do HCI in CSE?

Why do we do HCI in CSE?

Every engineering discipline includes the study of breakdowns and the design of improved solutions that address those breakdowns

Tacoma Narrows

O-Rings

History of O-Ring Damage in Field Joints (Cont)

MORTON THROKOL, INC.
Wastach Operations

* No Erosion

9488-11

INFORMATION ON THIS PAGE WAS PREPARED TO SUPPORT AN ORAL PRESENTATION
AND CANNOT BE CONSIDERED COMPLETE WITHOUT THE ORAL DISCUSSION

O-Rings

O-ring damage
index, each launch

Tractors

Tractors

Tractors

National Agricultural Safety Database Quotes

Older tractors with narrow front ends are easily upset

Tractor upsets cause more fatalities than other farm accidents

Injuries often include a broken or crushed pelvis

Tractors

Tractor upsets used to be dismissed as driver error

But such accidents are less frequent because modern designs have:

roll cage

low center of gravity

wider wheel bases

Human Factors Tradition

Emerges during and after WWII, as highly trained people are failing to effectively control the machinery they operate

(pilots are crashing planes)

The phrase “human factors” now often has a connotation of studying factory workers, ergonomics, or other physical tasks

(ask me about Grudin article if interested)

1988: Iran Air Flight 655

In 1987, *USS Stark* was struck by two missiles launched by an Iraqi Mirage F-1, killing 37 with no weapons fired in self-defense during the attack.

In 1988, crew of the *USS Vincennes* Combat Information Center confusingly reported the plane as ascending and descending at the same time (there were two "camps").

1988: Iran Air Flight 655

The Airbus's original track, number 4474, had been replaced by the *USS Sides* track, number 4131, when the computer briefly recognized them as one and the same. Shortly thereafter, track 4474 was re-assigned by the system to an American A-6, several hundred miles away, following a descending course at the time. Apparently not all the crew in the CIC realized the track number had been switched on them.

Why do we do HCI in CSE?

Every engineering discipline includes the study of breakdowns and the design of improved solutions that address those breakdowns

Understanding how and why human interaction breaks down is fundamental to designing better computing systems

This study must include computer scientists, as we are the ones creating the technology

A History Question

Who invented hypertext? When?

Computing in 1945

Harvard Mark I, 55 feet long, 8 feet high, 5 tons

Computing in 1945

Harvard Mark I, 55 feet long, 8 feet high, 5 tons

Computing in 1945

Ballistics calculations

Physical switches
(no microprocessor)

Paper tape

Simple arithmetic
& fixed calculations
(before programs)

3 sec. to multiply

Computing in 1945

First computer bug
(Harvard Mark II)

Adm. Grace Murray Hopper

1100 Started Cosine Tape (Sine check)
1525 Started Multi-Adder Test.

1545

Relay #70 Panel F
(moth) in relay.

~~1630~~ 1630 archange started.
1700 closed down.

First actual case of bug being found.

A Little About Vannevar Bush

Name rhymes with “Beaver”

Faculty member at MIT

Coordinated WWII effort
with 6000 US scientists

Social contract for science

funds universities

Universities do basic research

Research helps
economy and defense

As We May Think

Published in the Atlantic Monthly in 1945

<http://www.theatlantic.com/magazine/print/1945/07/as-we-may-think/3881/>

Motivated in part by defining a scientific grand challenge as WWII was ending

As We May Think

“There is a growing mountain of research. . . . The investigator is staggered by the findings and conclusions of thousands of other workers—conclusions which he cannot find time to grasp, much less to remember, as they appear. Yet specialization becomes increasingly necessary for progress, and the effort to bridge between disciplines is correspondingly superficial.”

As We May Think

“The world has arrived at an age of cheap complex devices of great reliability; and something is bound to come of it.”

“Had a Pharaoh been given detailed and explicit designs of an automobile, and had he understood them completely, it would have taxed the resources of his kingdom to have fashioned the thousands of parts for a single car, and that car would have broken down on the first trip to Giza.”

MicroPhotography

Describes a combination of photocells, facsimile transmission, and electron beam technology

Enables capturing a photograph into micro form

“It would be a brave man who would predict that such a process will always remain clumsy, slow, and faulty in detail.”

MicroPhotography

“Assume a linear ratio of 100 for future use. Consider film of the same thickness as paper, although thinner film will certainly be usable. Even under these conditions there would be a total factor of 10,000 between the bulk of the ordinary record on books, and its microfilm replica. The Encyclopedia Britannica could be reduced to the volume of a matchbox. A library of a million volumes could be compressed into one end of a desk.”

Memex

Memex

“If the user wishes to consult a certain book, he taps its code on the keyboard...”

“Frequently-used codes are mnemonic, so that he seldom consults his code book;”

“He can add marginal notes and comments ... even ... by a stylus scheme”

“All this is conventional...”

Memex

“It affords an immediate step, however, to associative indexing”

“tying two items together is the important thing”

“Before him are the two items to be joined, projected onto adjacent viewing positions. At the bottom of each there are a number of blank code spaces, and a pointer is set to indicate one of these on each item. The user taps a single key, and the items are permanently joined.”

Memex

“Thereafter, at any time, when one of these items is in view, the other can be instantly recalled merely by tapping a button below the corresponding code space. Moreover, when numerous items have been thus joined together to form a trail, they can be reviewed in turn, rapidly or slowly, by deflecting a lever like that used for turning the pages of a book.”

Memex

“Wholly new forms of encyclopedias will appear, ready made with a mesh of associative trails running through them, ready to be dropped into the memex and there amplified.”

Memex is the first proposed hypertext system

A History Question

Who invented desktop computing? When?

Macintosh in 1984 is well known

Macintosh in 1984 is well known

Alan Kay on Early Interface Work

Narrator is Alan Kay, speaking in 1987

XEROX 6085 Workstation

User-Interface Design

To make it easy to compose text and graphics in an electronic filing, printing, and routing all at the same workstation, requires a revolutionary user interface design.

Bit-map display Even if the pixels on the 19" screen is mapped to a bit of memory, this, ultimately complex images can be displayed. The 6085 displays all text and graphics as they will be printed. In addition, familiar office objects such as documents, folders, file drawers and bookshelves are portrayed as recognizable images.

The mouse (A unique pointing device that allows the user to quickly select any text, graphic or office object on the display.

Screen Point

All functions are visible to the user on the keyboard as on the screen. The user does filing and retrieval by pointing them with the mouse and reading the words color, black or redaction commands keys. Text and graphics are edited with the same keys.

Activity under the old and the new

Year	New users	Old
1978	85.2	0.1
1980	41.1	89.5
1982	45	55
1984	10	78
1985	10	99
1986	5	75
