CSE440: Introduction to HCI

Methods for Design, Prototyping and Evaluating User Interaction

Lecture 02:
History & State of the Art in HCI

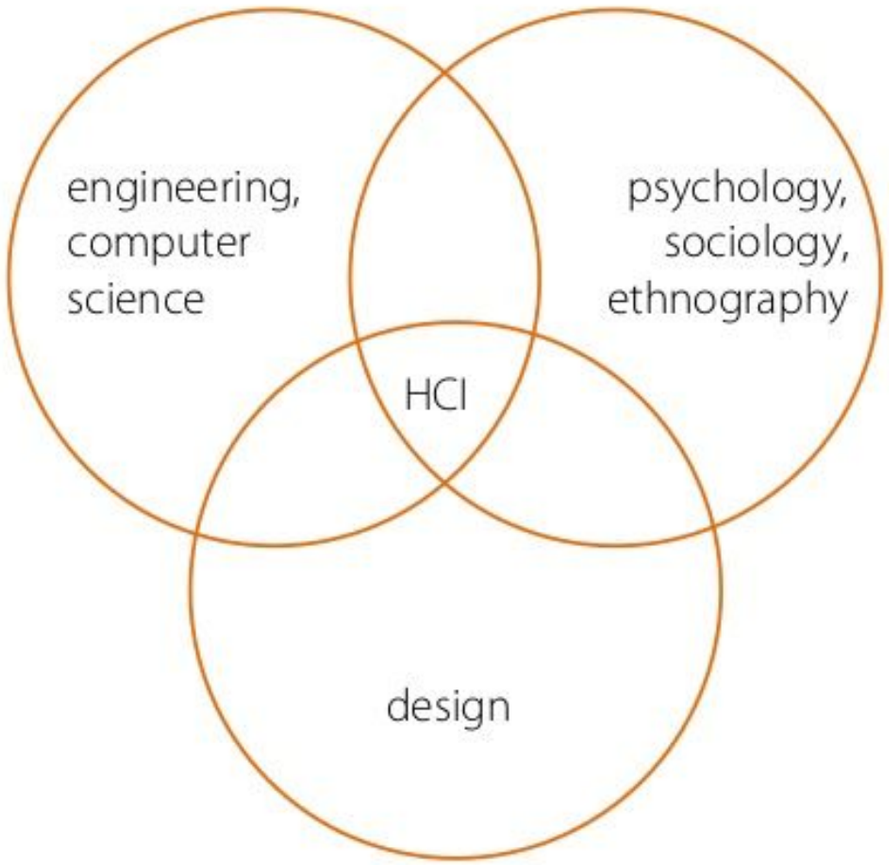
PAUL G. ALLEN SCHOOL
OF COMPUTER SCIENCE & ENGINEERING

What is HCI?

HCI (human-computer interaction) is the study of how people interact with computers and to what extent computers are or are not developed for successful interaction with human beings.



https://www.cs.bham.ac.uk/~rxb/Teaching/HCI%20II/intro.html

https://www.slideshare.net/agaszostek/history-and-future-of-human-computer-interaction-hci-and-interaction-design

HCI != Usability

A usable system is easy to learn, easy to remember how to use, effective, efficient, safe, and enjoyable to use.

Usability is only one part of HCI, but has been one of the main goals

For example, HCI has contributed to the **development of guidelines and standards** that support designers

HCI has also developed **methods of evaluation** that help us to evaluate the usability of a given product/system (and other aspects of the user experience)

In addition, HCI uses **mathematical models** to predict users' performance with a system (e.g., Fitt's law to predict mouse movement time, or models that predict search time or mental effort)

HCI also investigates new **interaction paradigms** or new ways of integrating technology in our daily lives (think smart clothes, touch displays, VR/AR, Voice-based interfaces …)

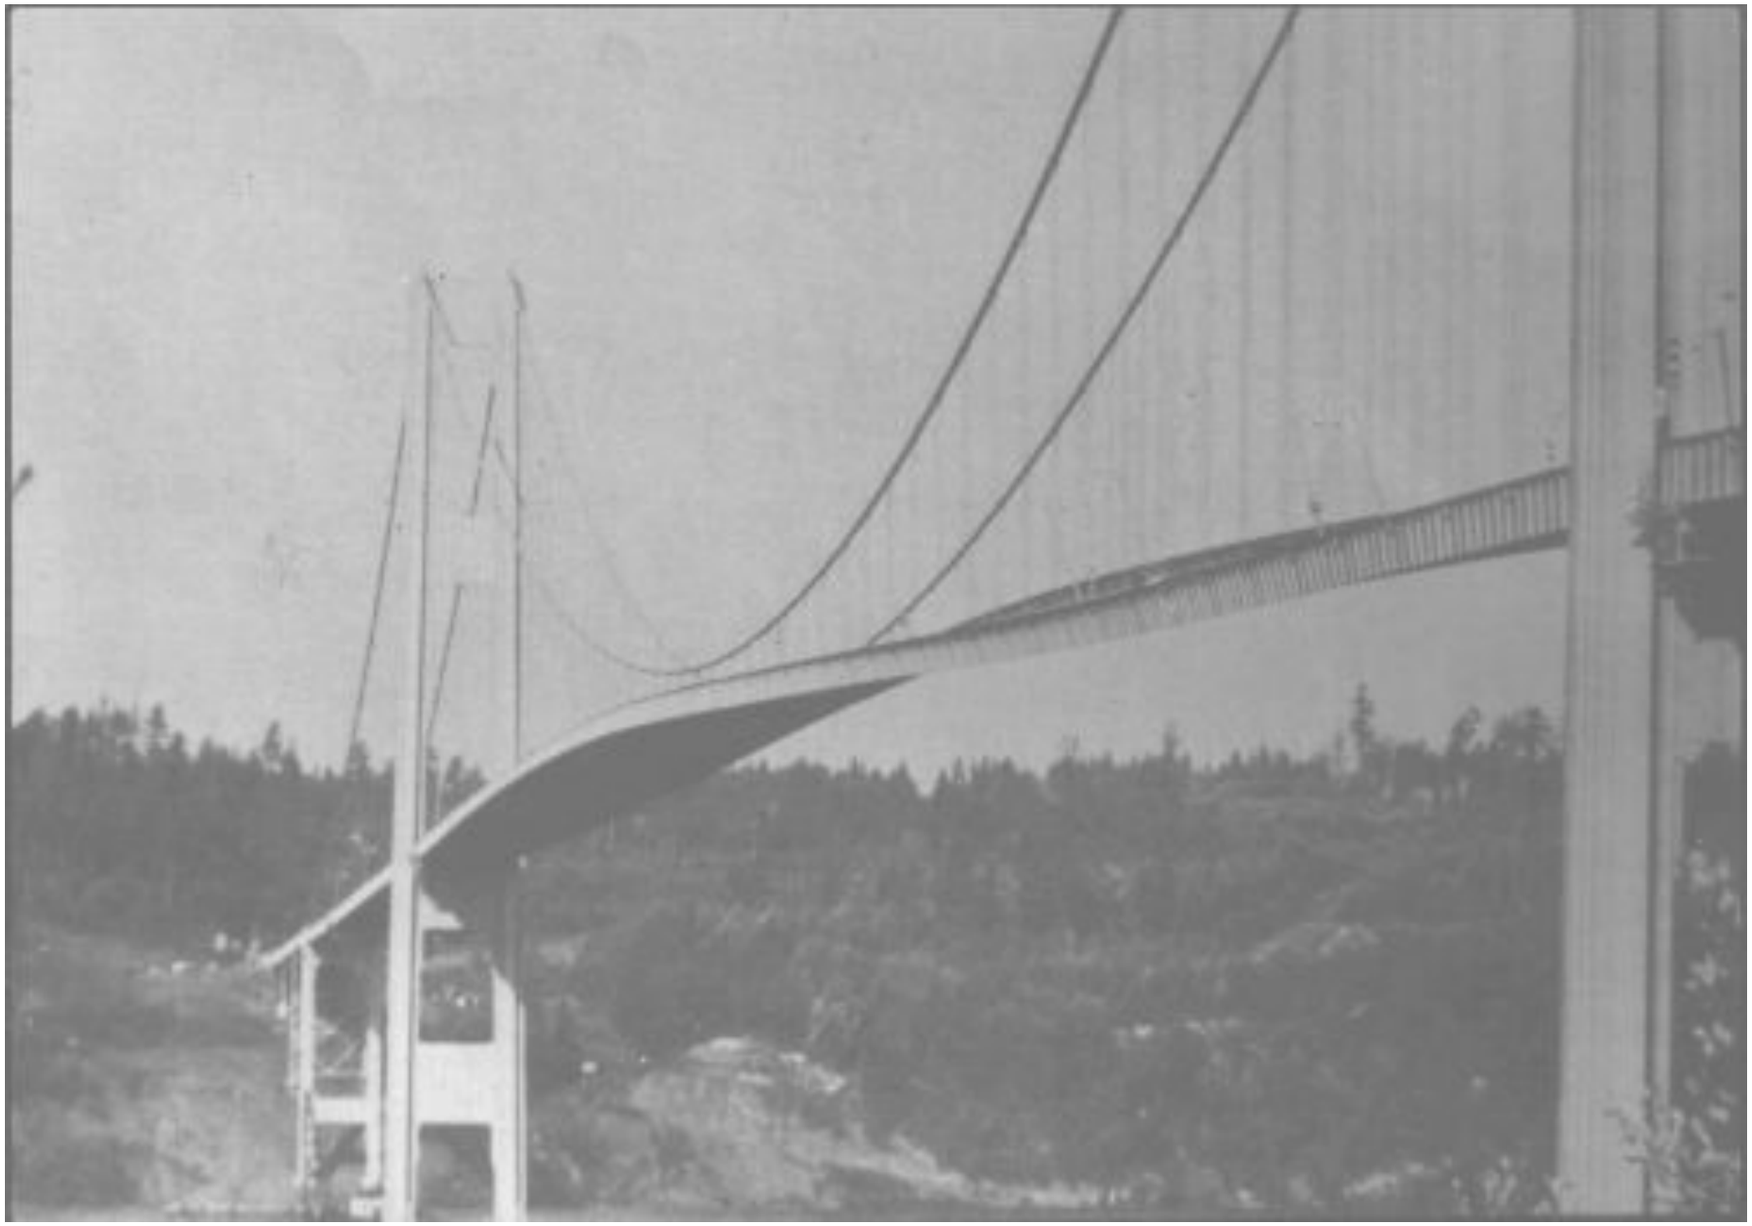
Boehm-Davis, Deborah A. "Discoveries and developments in human-computer interaction." *Human factors* 50.3 (2008): 560-564.

Why do we do HCI in CSE?

Every engineering discipline includes the **study of breakdowns** and the **design of improved / or new solutions** that address those breakdowns

Why do we do HCI in CSE?

Tacoma Narrows (nicknamed “Galloping Gertie”)



Why do we do HCI in CSE?

Tacoma Narrows (nicknamed “Galloping Gertie”)

Can you find a technology analogue to the collapse of the Tacoma bridge?

Inside Facebook's Myanmar operation
Hatebook
A REUTERS SPECIAL REPORT

Why do we do HCI in CSE?

Understanding how and why **human interaction breaks down** is fundamental to designing better computing systems

This study must include computer scientists, as we are the ones creating the technology

HCI is an extension of traditional CS disciplines

We design, scale, and evaluate computing systems for particular tasks (e.g., parallel programming, network routing)

HCI incorporates humans into the computing system
Humans as an additional constraint

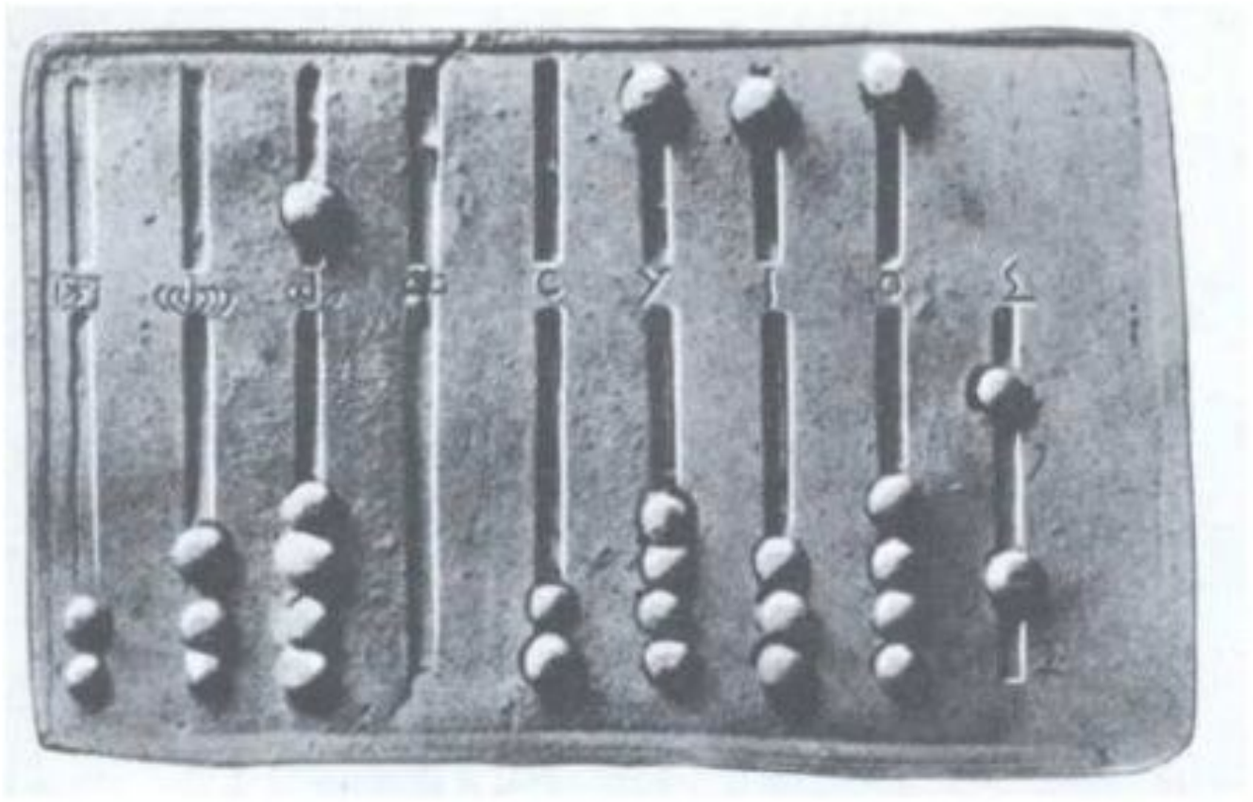
Any computer system must be designed taking into account

- the physical constraints of the machine (e.g., processor speed, networking capabilities)
- the human physical and mental constraints (e.g., attention, memory)
- (should we add, social level constraints?)

http://www.pgbovine.net/what-is-hci-research.htm

A history of HCI

Calculating devices in antiquity



https://www.slideshare.net/agaszostek/history-and-future-of-human-computer-interaction-hci-and-interaction-design

Konrad Zuse (1910-1995)

Invented the world’s first programmable computer (in 1941)

This remained the only working computer in Europe up to 1951

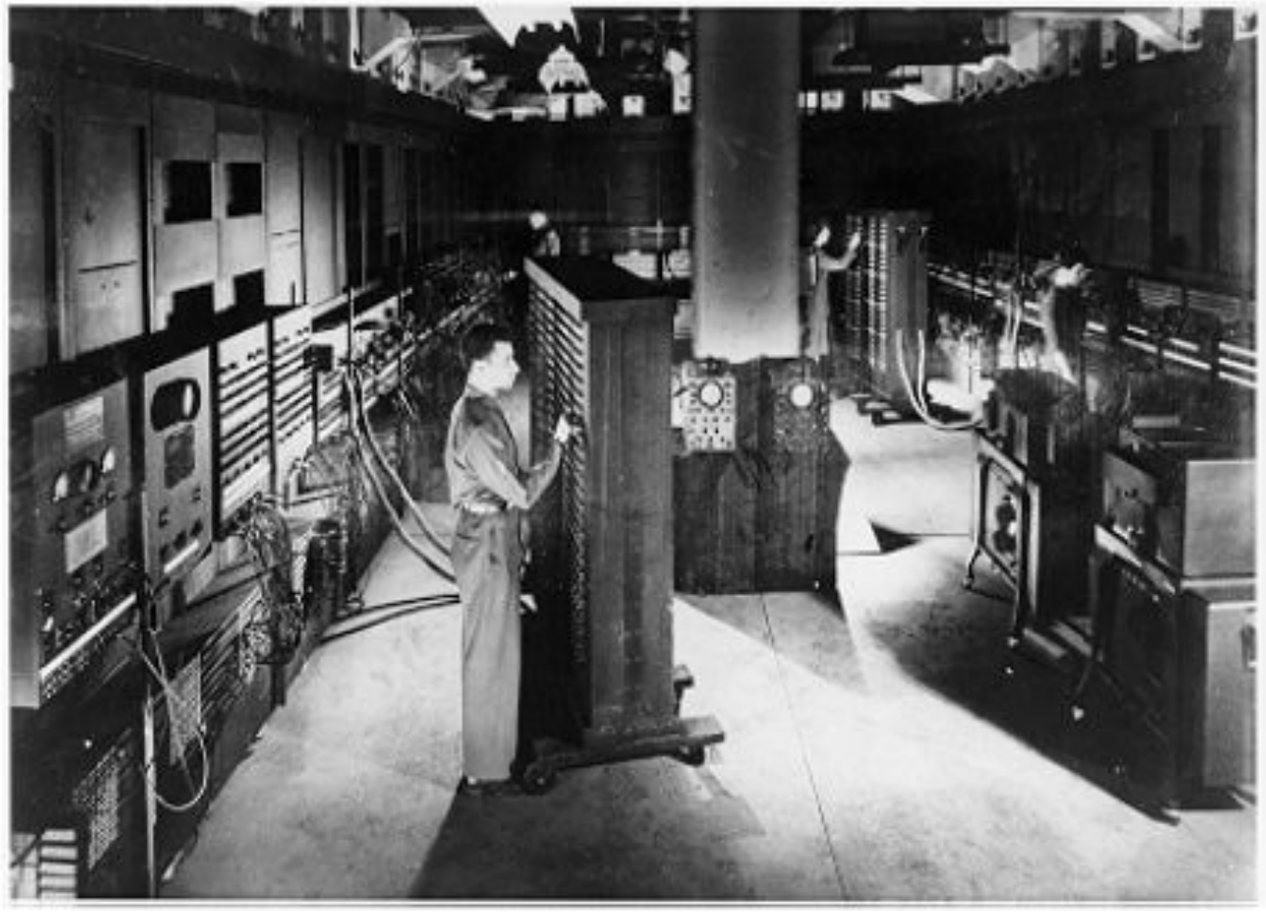
https://www.slideshare.net/agaszostek/history-and-future-of-human-computer-interaction-hci-and-interaction-design

ENIAC (~1946)

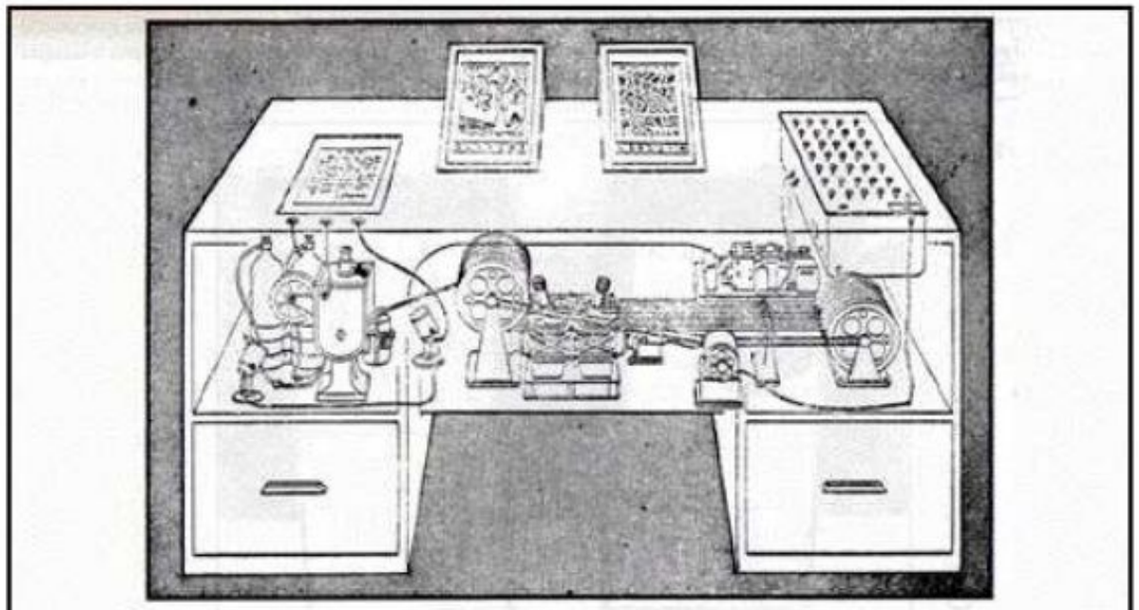
First electronic numerical integrator and computer in the US

Construction contract was signed in 1943

The first programmers of the ENIAC were six women (“Refrigerator Ladies”)



Memex (1945)



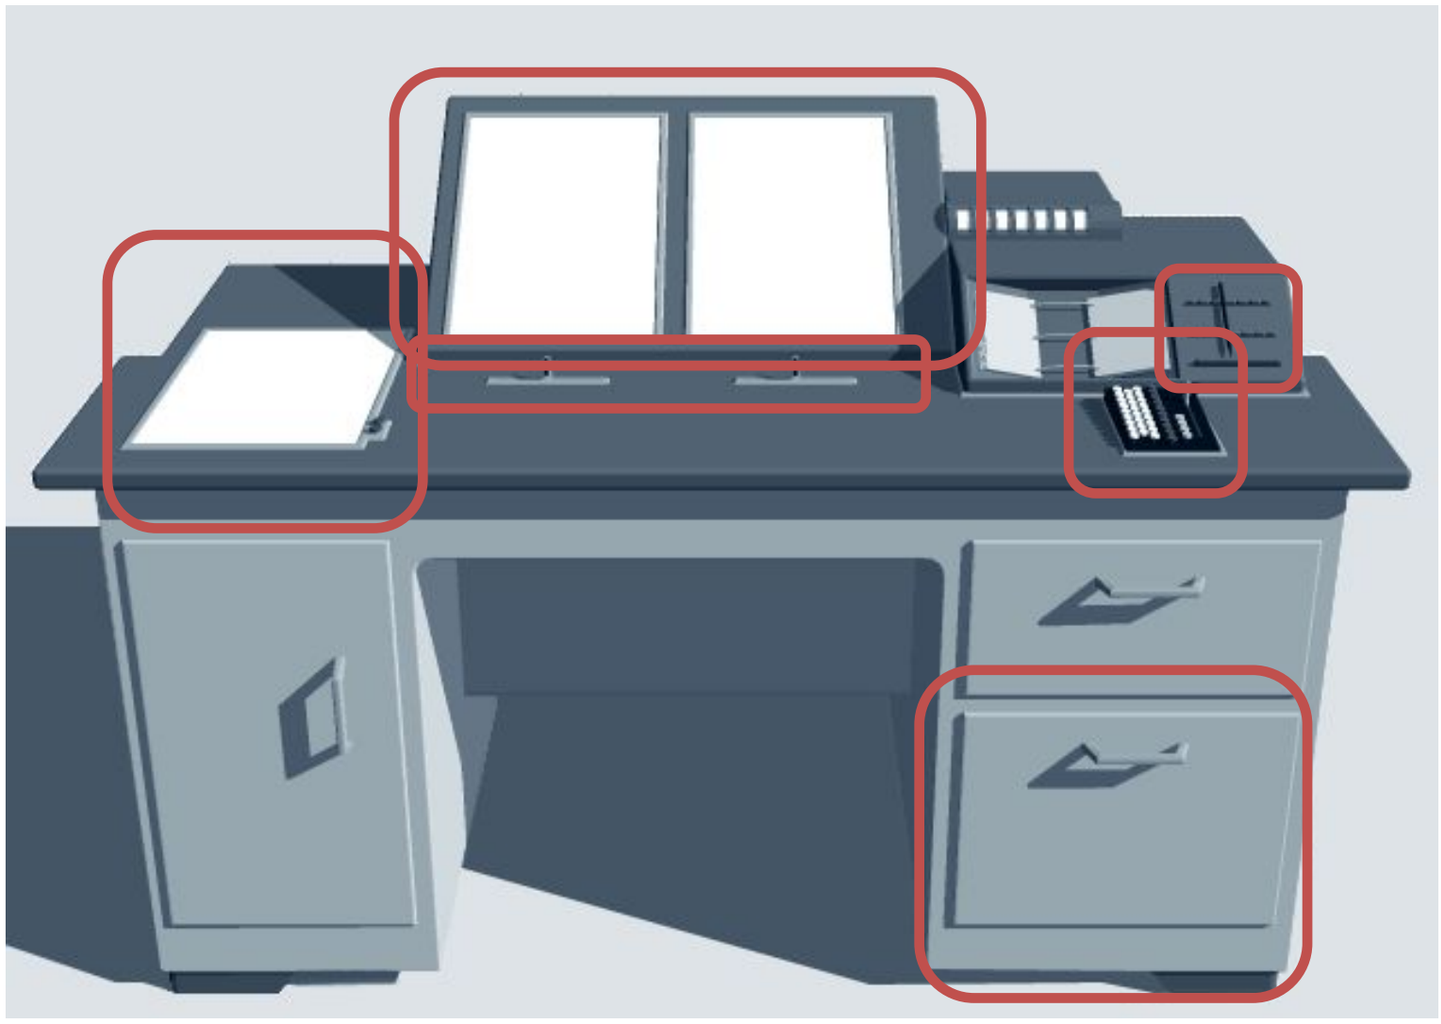
Memex in the form of a desk would instantly bring files and material on any subject to the operator's fingertips. Slanting translucent viewing screens magnify supermicrofilm filed by code numbers. At left is a mechanism which automatically photographs longhand notes, pictures and letters, then files them in the desk for future reference (*LIFE* 19(11), p. 123).

https://www.theatlantic.com/magazine/archive/1945/07/as-we-may-think/303881/

Memex (1945)

“wholly new forms of encyclopedias will appear, ready made with a mesh of associative trails running through them…”

Memex (1945)



Memex (1945)

“If the user wishes to consult a certain book, he taps its code on the keyboard…”

“Frequently-used codes are mnemonic, so that he seldom consults his code book;”

“He can add marginal notes and comments … even … by a stylus scheme”

“All this is conventional…”

SketchPad by Ivan Sutherland at MIT (1963)

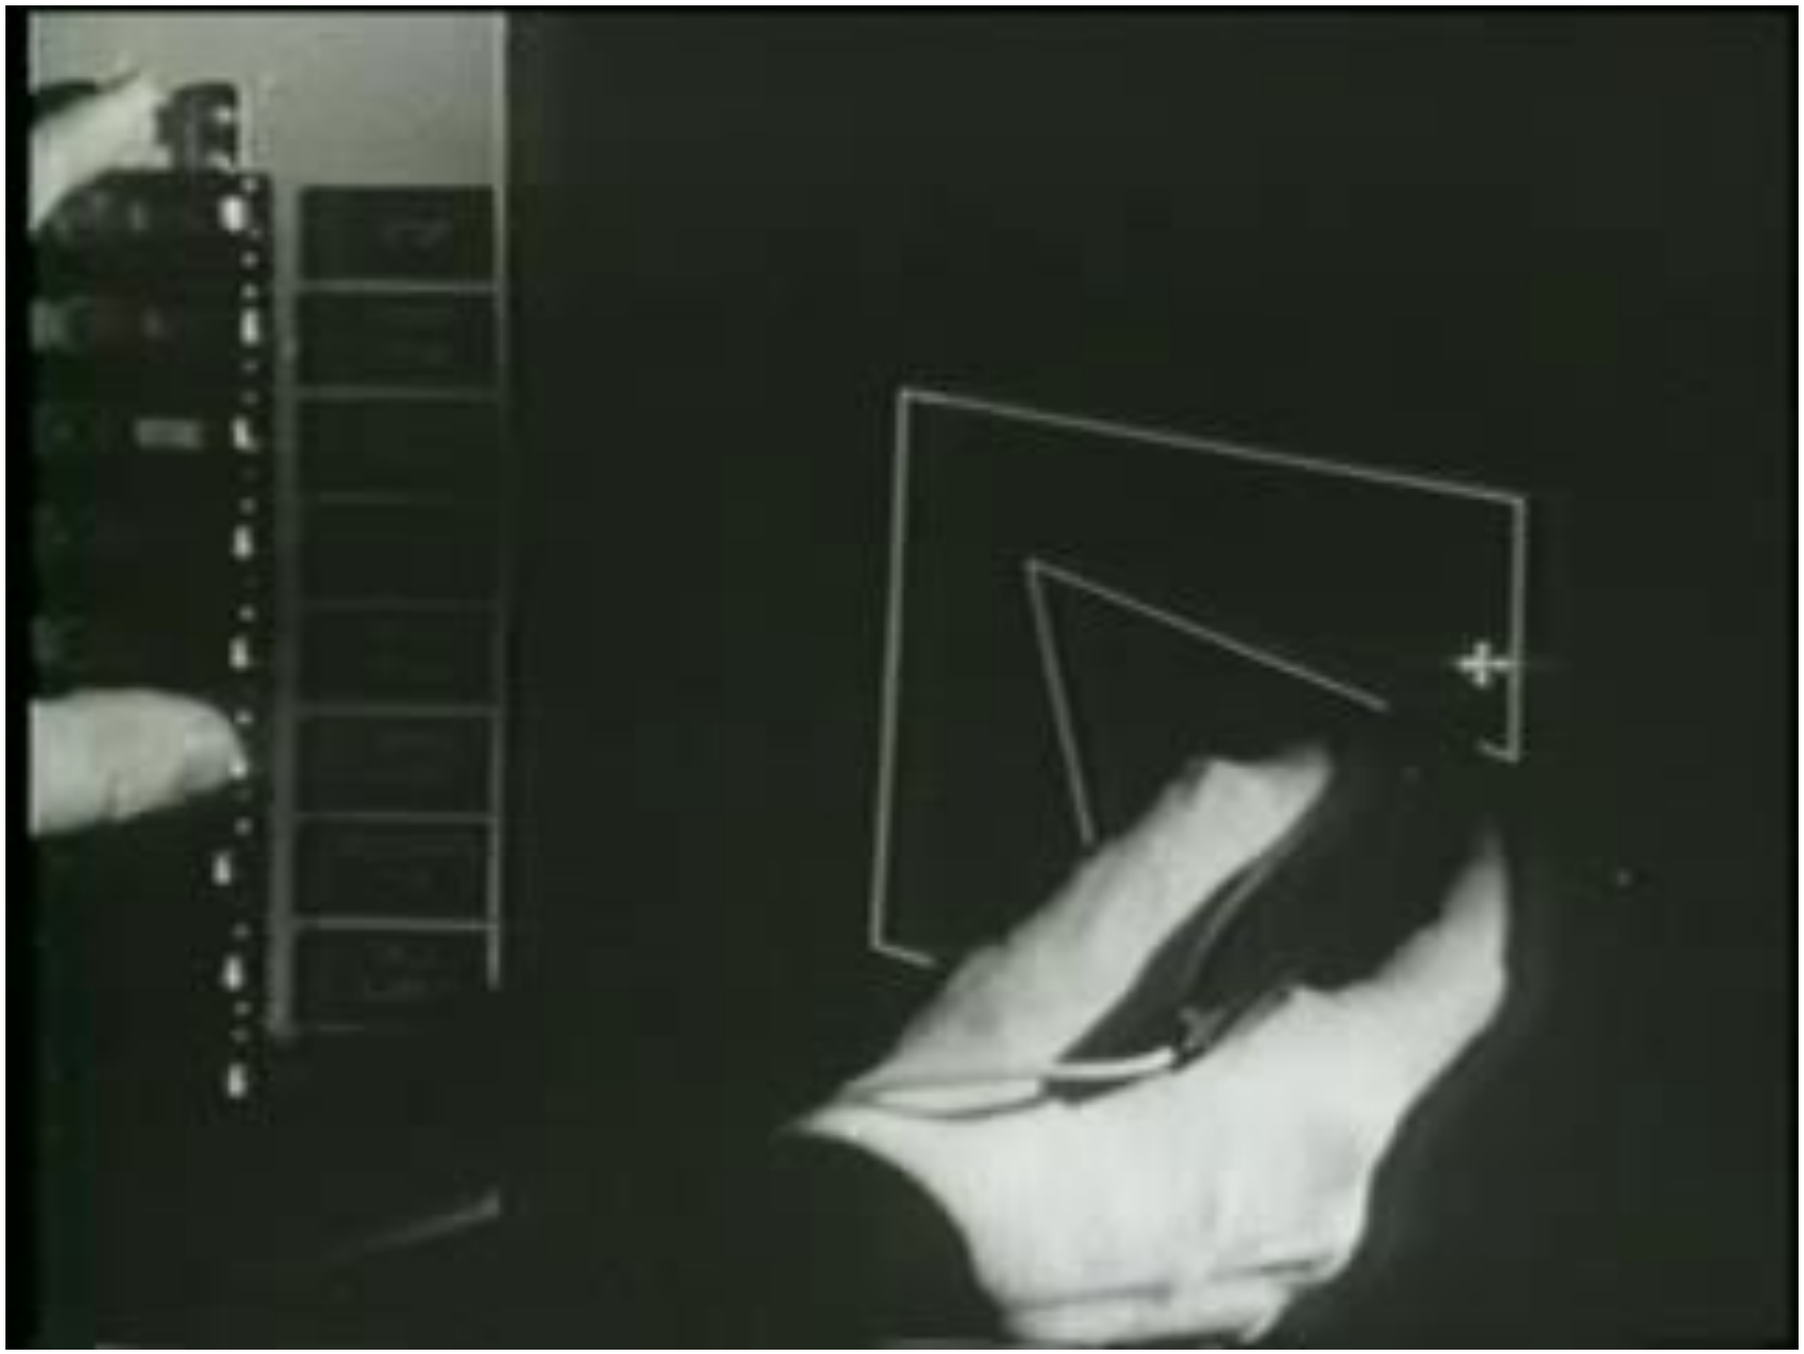
SketchPad by Ivan Sutherland



https://courses.cs.washington.edu/courses/cse440/videos/history/AlanKay1987-Sketchpad.m4v

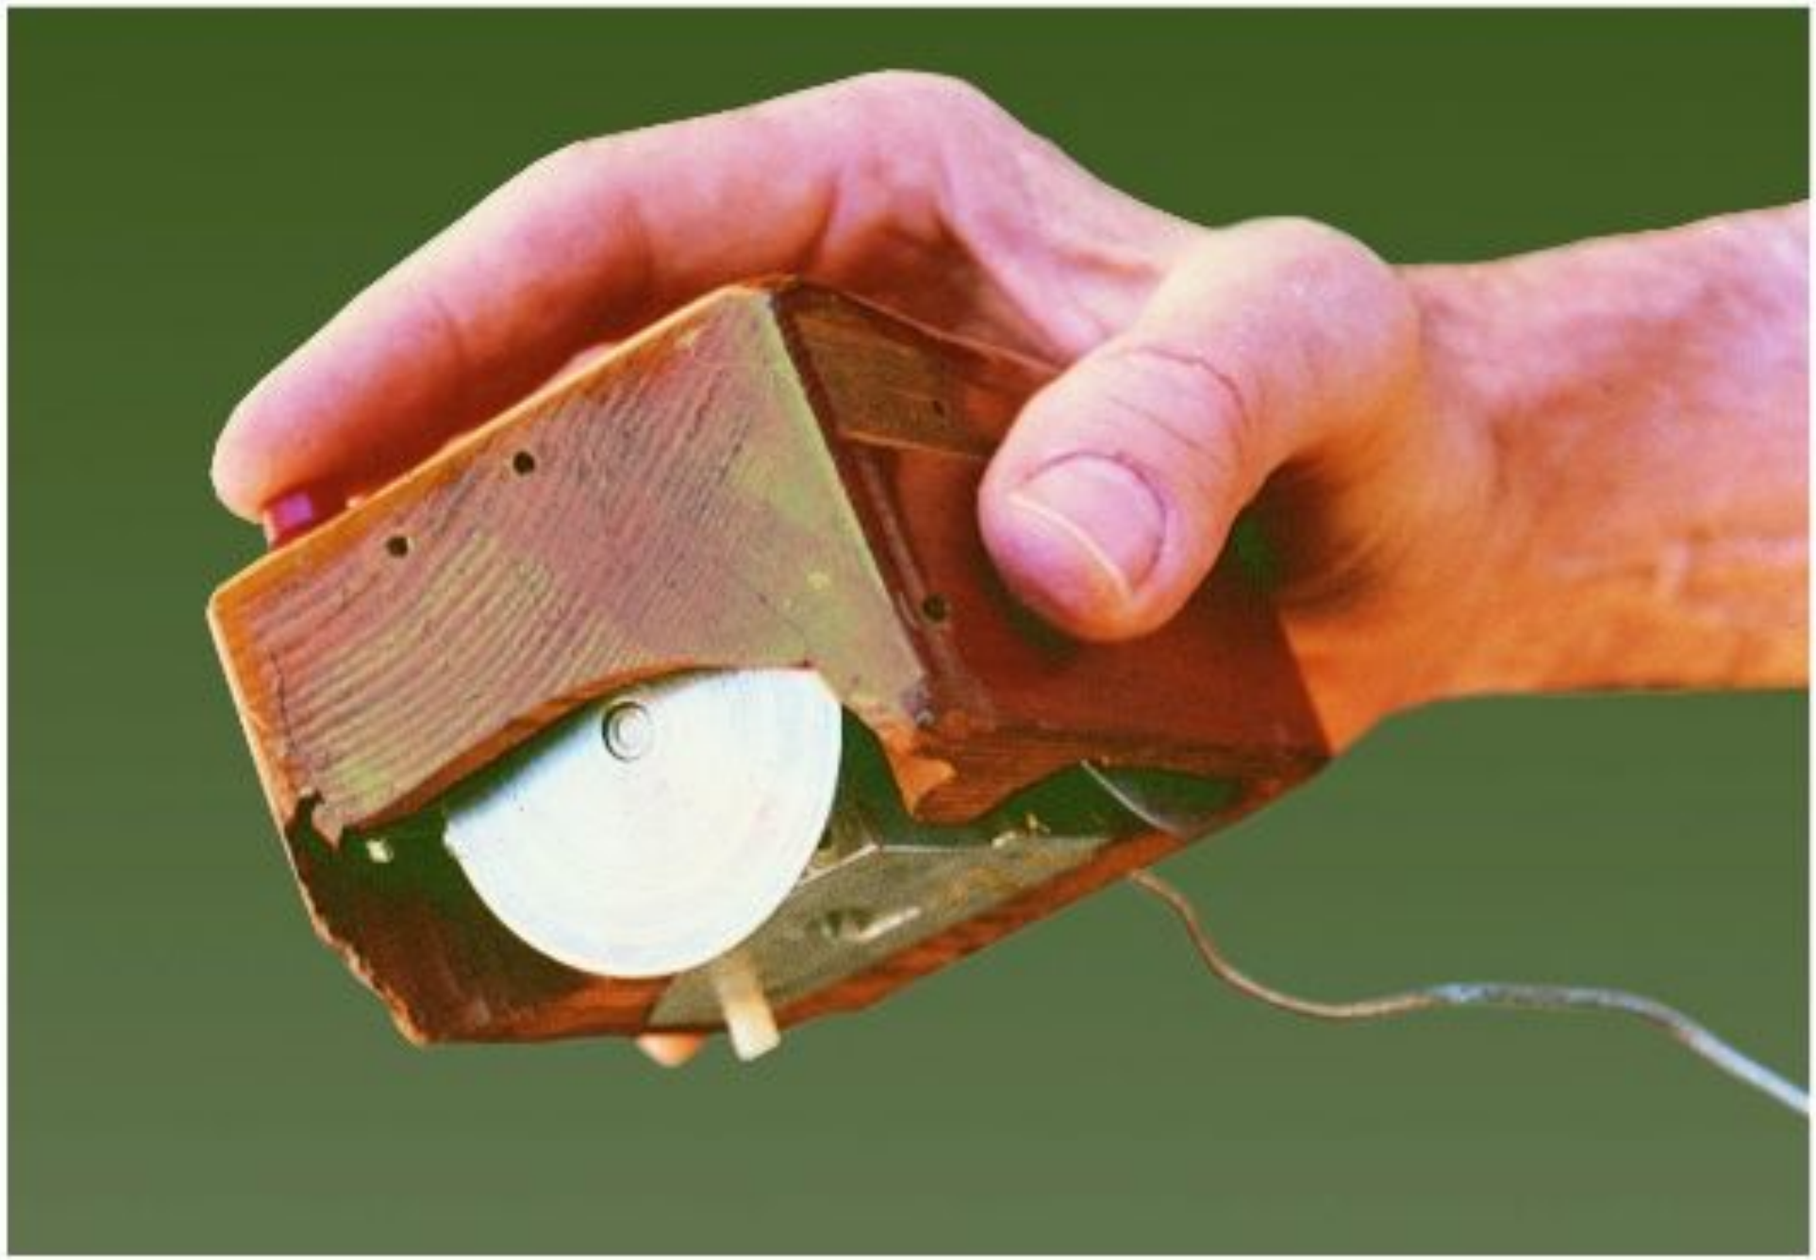
SketchPad by Ivan Sutherland at MIT (1963)

Direct manipulation of objects

SketchPad paved the way for the Graphical User Interface

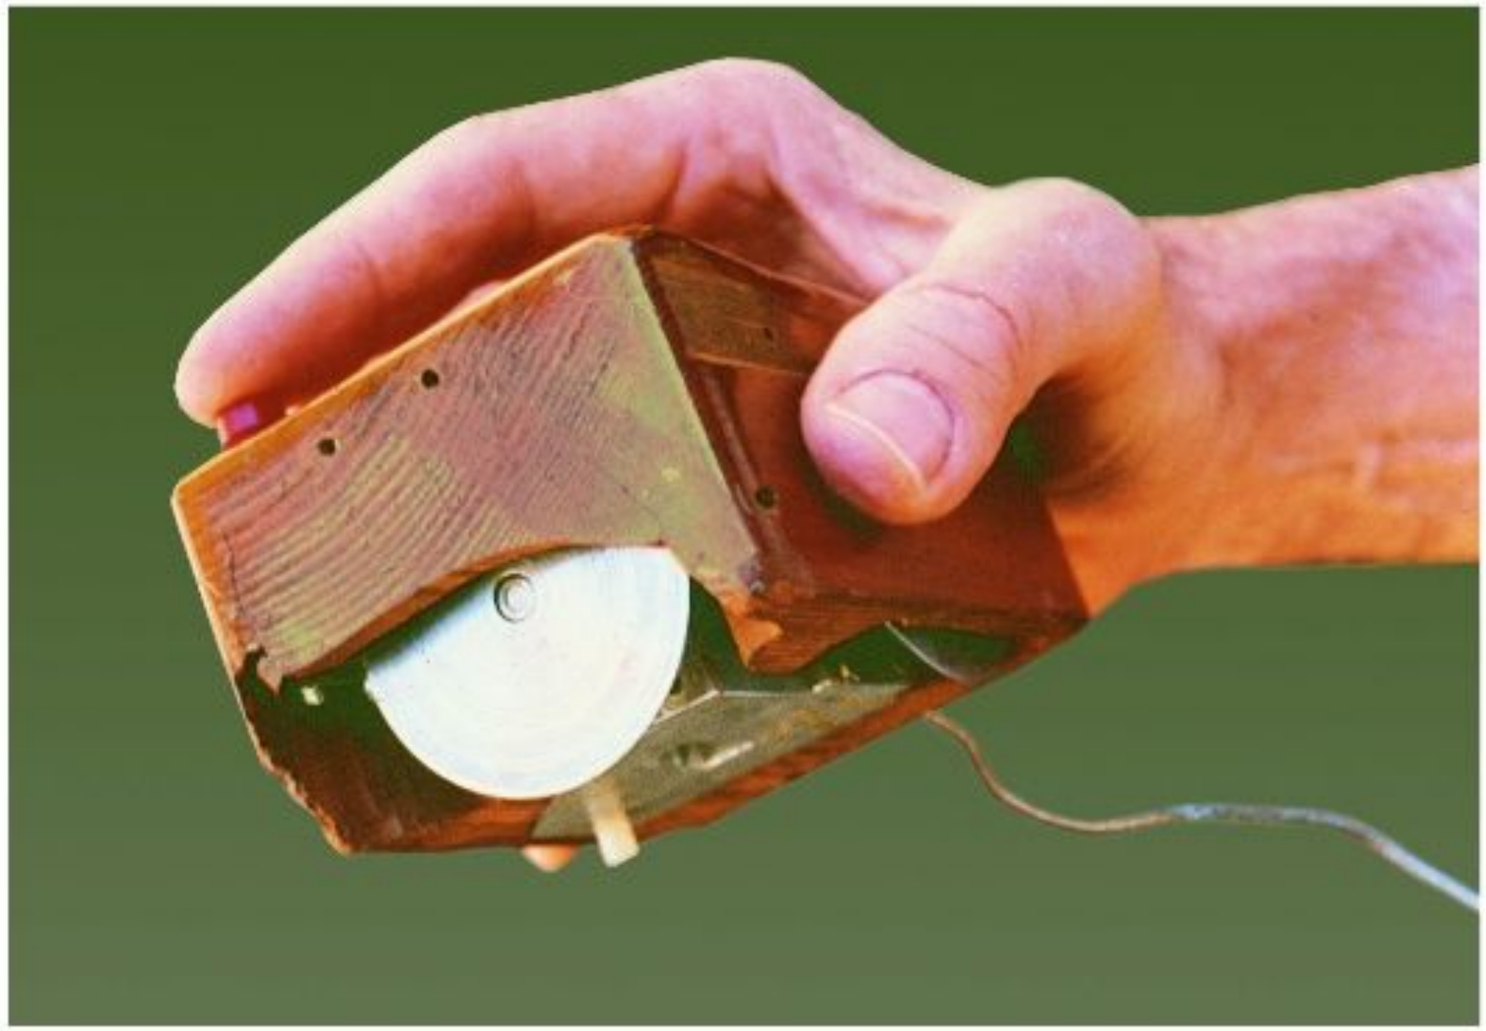
Sutherland’s PhD thesis also defined the terms “objects” and “instance”

SketchPad is the first object-oriented programming system



https://www.slideshare.net/agaszostek/history-and-future-of-human-computer-interaction-hci-and-interaction-design

First mouse by Engelbard at Stanford (1963)



https://www.slideshare.net/agaszostek/history-and-future-of-human-computer-interaction-hci-and-interaction-design

Nothing eventful happened in the next 10 years…

VisiCalc (1979)

VisiCalc was the Killer App for Personal Computers

Turned the microcomputer from a hobby for nerds into a serious thing

Because of it, IBM introduced the IBM PC 2 years later

Suddenly, small and large business bought computers

With the emergence of personal computing in the late 1970s, everyone became a potential computer user

With the emergence of personal computing in the late 1970s, everyone became a potential computer user…

… but computer users still had to deal with arcane commands and system dialogs

"HCI is concerned with understanding the influence technology has on how people think, value, feel, and relate and using this understanding to inform technology design." Wright & McCarthy (2008)

HCI’s impact on society

We can now use computers as an every-moment-partner

Less and less training is required for most application and devices

Some examples

- Touch screen: direct interaction with objects
- Voice control: for some people the only way to interact with computers

HCI’s impact on culture

Smartphones have changed how we spend our "empty times": should we read the news? answer emails? chat with friends? play "2 Dots"? should we just be bored?

Social Media have influenced how we stay in touch with each other and how find new friends and lovers.

Games, more than entertainment, can be used as social and even productive tools.

HCI’s impact on economy

Massive increase in productivity

HCI found how to speed up input and reduce its complexity

People can perform tasks faster than they used to

Reduced need for training

More people can use technology than ever before

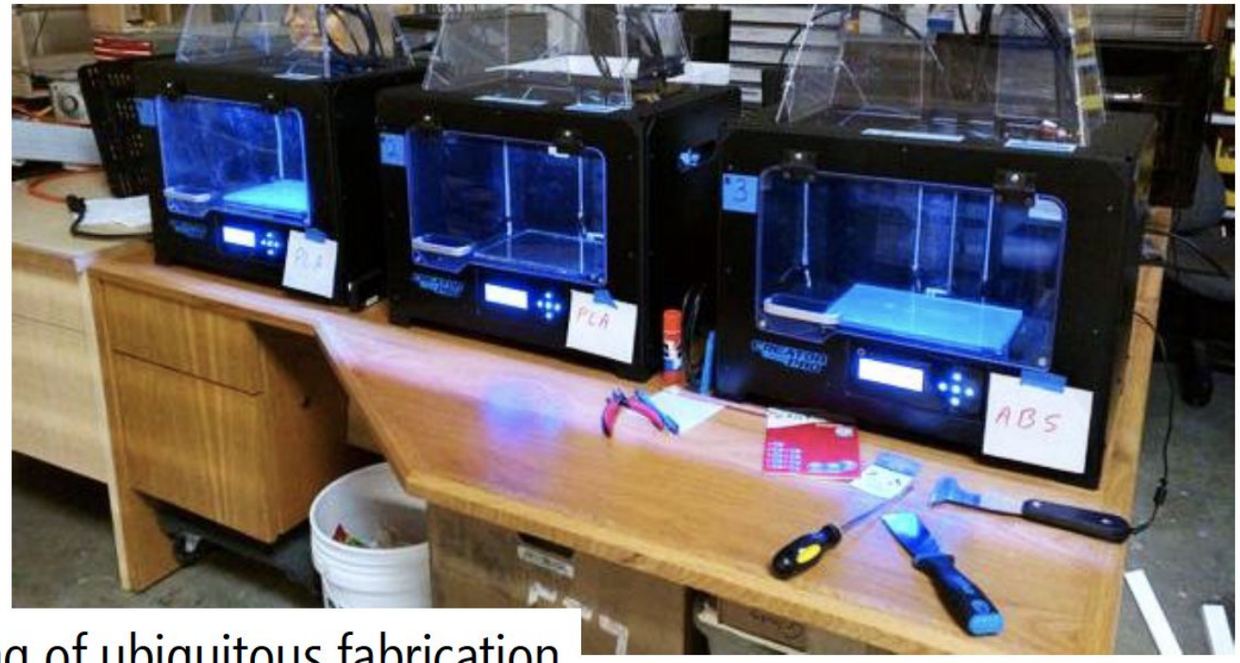
What now???

Fabrication (3D Printing) in HCI

1987
The first commercial 3D printer
SLA-1 printer by 3D Systems Inc.
Invented by Charles Hull

1992
The first commercial FDM printer
3D Modeler by Stratasys, Inc.
Invented by Scott & Lisa Crump

“The idea for the technology came to Crump in 1988 when he decided to make a **toy frog for his young daughter using a glue gun loaded with a mixture of polyethylene and candle wax**. He thought of creating the shape layer by layer and of a way to automate the process. In April 1992, Stratasys sold its first product, the 3D Modeler.”



2009 marked the beginning of ubiquitous fabrication

And beyond (VR/AR)

Activity

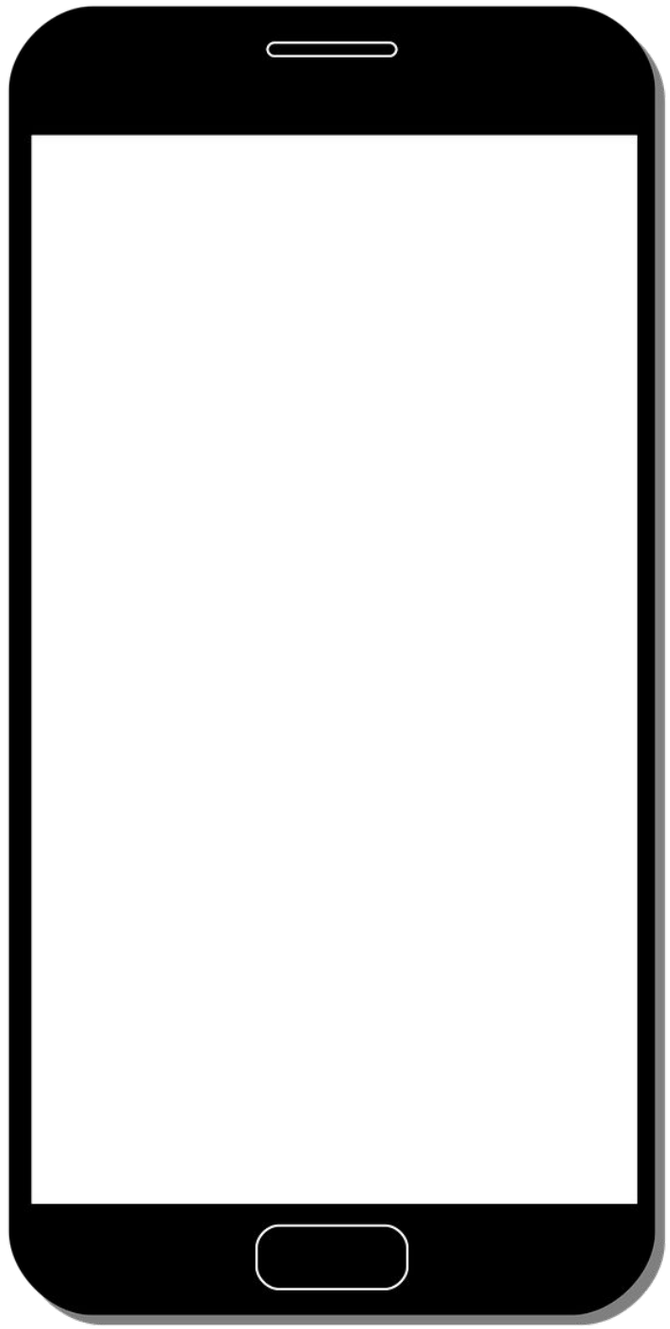
Activity (10 minutes)

In groups of 2…

How would you change this thing?

Make sure your idea is innovative!

Sketch out your design on a piece of paper and write your names on it
(this time we will collect it :))

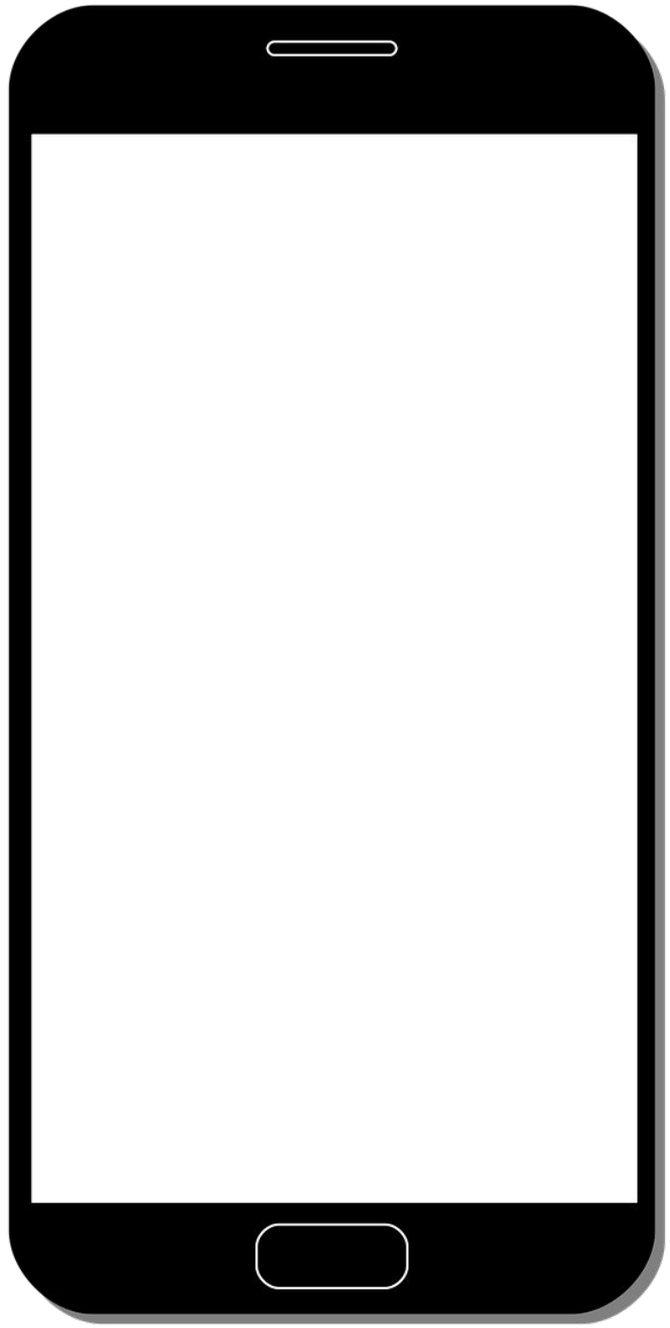


Reflection

What did you come up with?

What were the challenges?

How did your process differ from what you did on Thursday?



Ask me something!
