CSE440: Introduction to HCI

Methods for Design, Prototyping and Evaluating User Interaction

Lecture 02: History & State of the Art in HCI

Nigini Oliveira Abhinav Yadav Liang He Angel Vuong Jeremy Viny

What is HCI?

HCI (human-computer interaction) is the study of how people interact with computers and to what extent technology is or is not developed for successful interaction with human beings.

https://www.cs.bham.ac.uk/~rxb/Teaching/HCI%20II/intro.html

https://www.slideshare.net/agaszostek/history-and-future-of-human-computer-interaction-hci-and-interaction-design

HCI != Usability

A usable system is easy to learn, easy to remember how to use, effective, efficient, safe, and enjoyable to use.

Usability is only one part of HCI, but has been one of the main goals. HCI has also:

- developed guidelines and standards that support designers
- developed **methods** to evaluate the user experience of a given product/system
- used **mathematical models** to predict users' performance with a system (e.g., Fitt's law for mouse movement time, and models that predict search time or mental effort)
- investigated new **interaction paradigms** or new ways of integrating technology in our lives (think smart clothes, touch displays, VR/AR, voice-based interfaces ...)

Why do we do HCI in CSE?

Every engineering discipline includes the study of **breakdowns** and the design of improved / or new **solutions** that address those breakdowns

Why do we do HCI in CSE?

Tacoma Narrows (nicknamed "Galloping Gertie")

Why do we do HCI in CSE?

Tacoma Narrows (nicknamed "Galloping Gertie")

2-minute activity

Can you find a technology analogue to the collapse of the Tacoma bridge?

REUTERS SPECIAL REPORT

Why do we do HCl in CSE?

Understanding how and why **human interaction breaks down** is fundamental to designing better technology

This study must include computer scientists, as we are the ones creating/building the technology

HCI is an extension of traditional CS disciplines

We **design, implement, and evaluate** computing systems for particular tasks (e.g., parallel programming, network routing)

HCI incorporates humans into the computing system

- Humans as an additional constraint

Any computer system must be designed taking into account

- the **physical** constraints of the machine (e.g., processor speed, networking capabilities)
- the human physical and mental constraints (e.g., attention, memory)
- (should we add, social level constraints?)

A history of HCI

Calculating devices in antiquity

Konrad Zuse (1910-1995)

Invented the world's first programmable computer (in 1941)

This remained the only working computer in Europe up to 1951

ENIAC (~1946)

First electronic numerical integrator and computer in the US

Construction contract was signed in 1943

The first programmers of the ENIAC were six women ("Refrigerator Ladies")

https://www.theatlantic.com/magazine/archive/1945/07/as-we-may-think/303881/

"wholly new forms of encyclopedias will appear, ready made with a mesh of **associative trails** running through them..."

"If the user wishes to **consult** a certain book, he taps its **code** on the keyboard..."

"Frequently-used codes are **mnemonic**, so that he seldom consults his code book;"

"He can add marginal **notes and comments** ... even ... by a stylus scheme"

SketchPad by Ivan Sutherland at MIT (1963)

https://www.slideshare.net/agaszostek/history-and-future-of-human-computer-interaction-hci-and-interaction-design

SketchPad by Ivan Sutherland

https://courses.cs.washington.edu/courses/cse440/videos/history/AlanKay1987-Sketchpad.m4v

SketchPad by Ivan Sutherland at MIT (1963)

Direct manipulation of objects

SketchPad paved the way for the Graphical User Interface

Sutherland's PhD thesis also defined the terms "objects" and "instance"

SketchPad is the first **object-oriented** programming system

https://www.slideshare.net/agaszostek/history-and-future-of-human-computer-interaction-hci-and-interaction-design

First mouse by Engelbard at Stanford (1963)

https://www.slideshare.net/agaszostek/history-and-future-of-human-computer-interaction-hci-and-interaction-design

Nothing eventful happened in the next 10 years...

VisiCalc (1979)

VisiCalc was the **Killer App** for Personal Computers

Turned the microcomputer from a hobby for nerds into a serious thing

Because of it, IBM introduced the IBM PC 2 years later

Suddenly, small and large business bought computers

With the emergence of personal computing in the late 1970s, everyone became a potential computer user...

With the emergence of personal computing in the late 1970s, everyone became a potential computer user...

... but computer users still had to deal with arcane commands and system dialogs

6085 Workstation

DEcample ViewPoint Document

User-Interface Design

To make it says to compose text and graphics, to do electronic filing, printing, and is alling all at the same workstation, requires a musiallenary user interface design.

distemps alignlay. Each of the pixele on the 1W screen is mapped to a but in memory; thus, adultantly complex images can be displayed. The 5085 displays all fauts and graphics as they will be printed. In addition, familiar office objects such as decaments, folders, file downers and in-baskets are perimyed as recognizable images.

The measure A unique pointing device that allows the aver to quickly select any text, graphic or effice object on the display.

See and Polat

All functions are writble to the user on the keyboard or on the screen. The user does tilling and corrieval by selecting them with the secare and traching the solvet conv. Detert or subvisition command keys. Text and graphics are edited with the many keys.

Experience at Xeron with prototope work stations has drawn diarter production times and thus lever costs, as a function of the prototopy of one of the workstations. The following equation can be used to express this

World Wide Web (1990)

https://www.slideshare.net/agaszostek/history-and-future-of-human-computer-interaction-hci-and-interaction-design

"HCI is concerned with understanding the influence technology has on how people think, value, feel, and relate and using this understanding to inform technology design." Wright & McCarthy (2008)

HCI's impact on society

We can now use computers as an every-momentpartner

Less and less training is required for most application and devices

Some examples

- Touch screen: direct interaction with objects
- Voice control: for some people the only way to interact with computers

HCI's impact on culture

Smartphones have changed how we spend our "empty times": should we read the news? answer emails? chat with friends? play "2 Dots"? should we just be bored?

Social Media have influenced how we stay in touch with each other and how find new friends and lovers.

Games, more than entertainment, can be used as social and even productive tools.

HCI's impact on economy

Massive increase in productivity

HCI found how to speed up input and reduce its complexity

People can perform tasks faster than they used to

Reduced need for training

More people can use technology than ever before

What now???

Fabrication (3D Printing) in HCI

1987 The first commercial 3D printer SLA-1 printer by 3D Systems Inc. Invented by Charles Hull

1992 The first commercial FDM printer 3D Modeler by Stratasys, Inc. Invented by Scott & Lisa Crump

"The idea for the technology came to Crump in 1988 when he decided to make a **toy frog for his young daughter using a glue gun loaded with a mixture of polyethylene and candle wax**. He thought of creating the shape layer by layer and of a way to automate the process. In April 1992, Stratasys sold its first product, the 3D Modeler."
