The Problem
Finding where to park should be simple, but it is often hard to predict availability which makes it a time consuming task.

Our Solution
Give drivers a way to find parking based on their preferences, supporting both: **pre-planned** and **real-time** parking.

Key Features
Filter on different factors, view suggestions in list or map view, edit planned drives, and leave feedback on your parking experience.

Design Iteration

**Sketches**

**Storyboards**

**Paper Prototypes**
