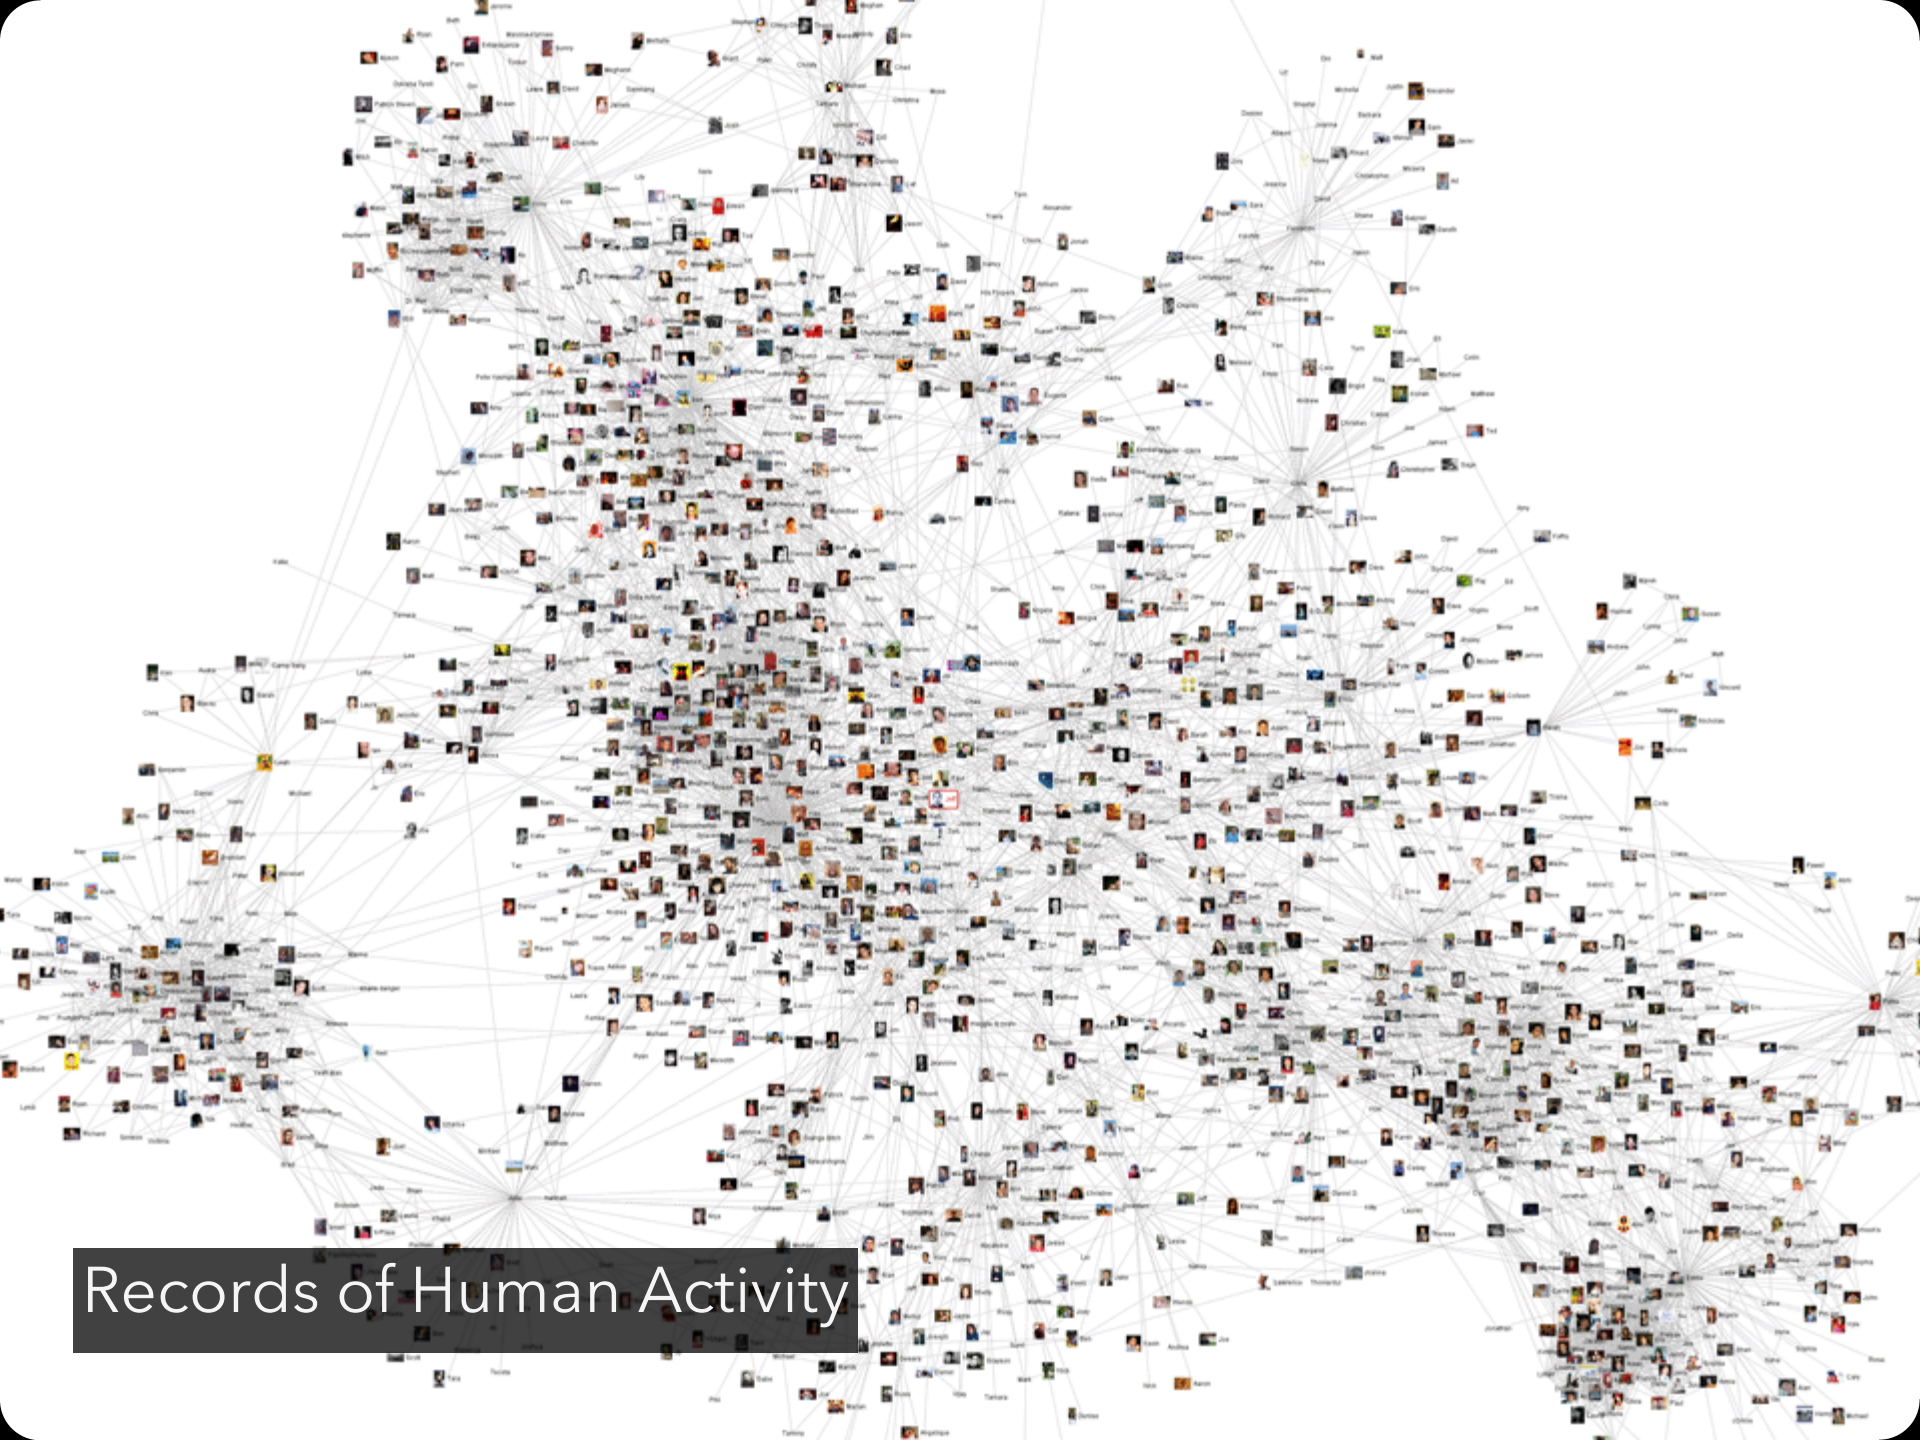
Health & Medicine



Records of Human Activity

The ability to take data—to be able to **understand** it, to **process** it, to **extract value** from it, to **visualize** it, to **communicate** it—that's going to be a hugely important skill in the next decades, … because now we really do have **essentially free and ubiquitous data**. So the complimentary scarce factor is the ability to understand that data and extract value from it.

Hal Varian, Google's Chief Economist
The McKinsey Quarterly, Jan 2009

But wait!

The ability to take data—to be able to **understand** it, to **process** it, to **extract value** from it, to **visualize** it, to **communicate** it—that's going to be a hugely important skill in the next decades, … because now we really do have **essentially free and ubiquitous data**. So the complimentary scarce factor is the ability to understand that data and extract value from it.

"free" to whom?

"ubiquitous" about whom?

…to whose benefit?

Hal Varian, Google's Chief Economist
The McKinsey Quarterly, Jan 2009

Life-size cutouts of Facebook CEO Mark Zuckerberg are displayed by a progressive advocacy group on the lawn of the U.S. Capitol on Tuesday.

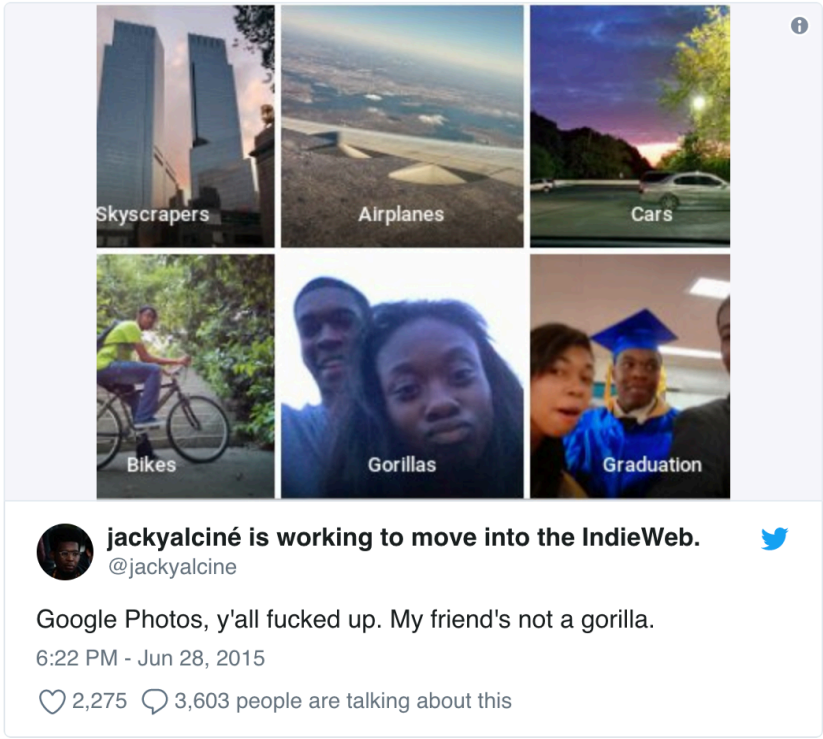
High potential for data abuse…

Inequality

Rise of the racist robots – how AI is learning all our worst impulses

There is a saying in computer science: garbage in, garbage out. When we feed machines data that reflects our prejudices, they mimic them – from antisemitic chatbots to racially biased software. Does a horrifying future await people forced to live at the mercy of algorithms?



…amplified by “big data” and ML systems.

We move from data to information to knowledge to wisdom, and separating one from the other, being able to distinguish among and between them that is, knowing the limitations and the danger of exercising one without the others while respecting each category of intelligence, is generally what serious education is about.

Toni Morrison, American Novelist

The Source of Self Regard

How might we use **visualization** to **empower understanding** of data and analysis processes?

What is Visualization?

"Transformation of the symbolic into the geometric" [McCormick et al. 1987]

"... finding the artificial memory that best supports our natural means of perception." [Bertin 1967]

"The use of computer-generated, interactive, visual representations of data to amplify cognition." [Card, Mackinlay, & Shneiderman 1999]

Set A		Set B		Set C		Set D	
X	Y	X	Y	X	Y	X	Y
10	8.04	10	9.14	10	7.46	8	6.58
8	6.95	8	8.14	8	6.77	8	5.76
13	7.58	13	8.74	13	12.74	8	7.71

Washington Post

The Value of Visualization

Record information
- Blueprints, photographs, seismographs, …

Analyze data to support reasoning
- Develop and assess hypotheses
- Find patterns / Discover errors in data
- Expand memory

Convey information
- Communicate, inform, inspire
- Collaborate and revise

Goals of Visualization Research

1. **Understand** how visualizations convey information

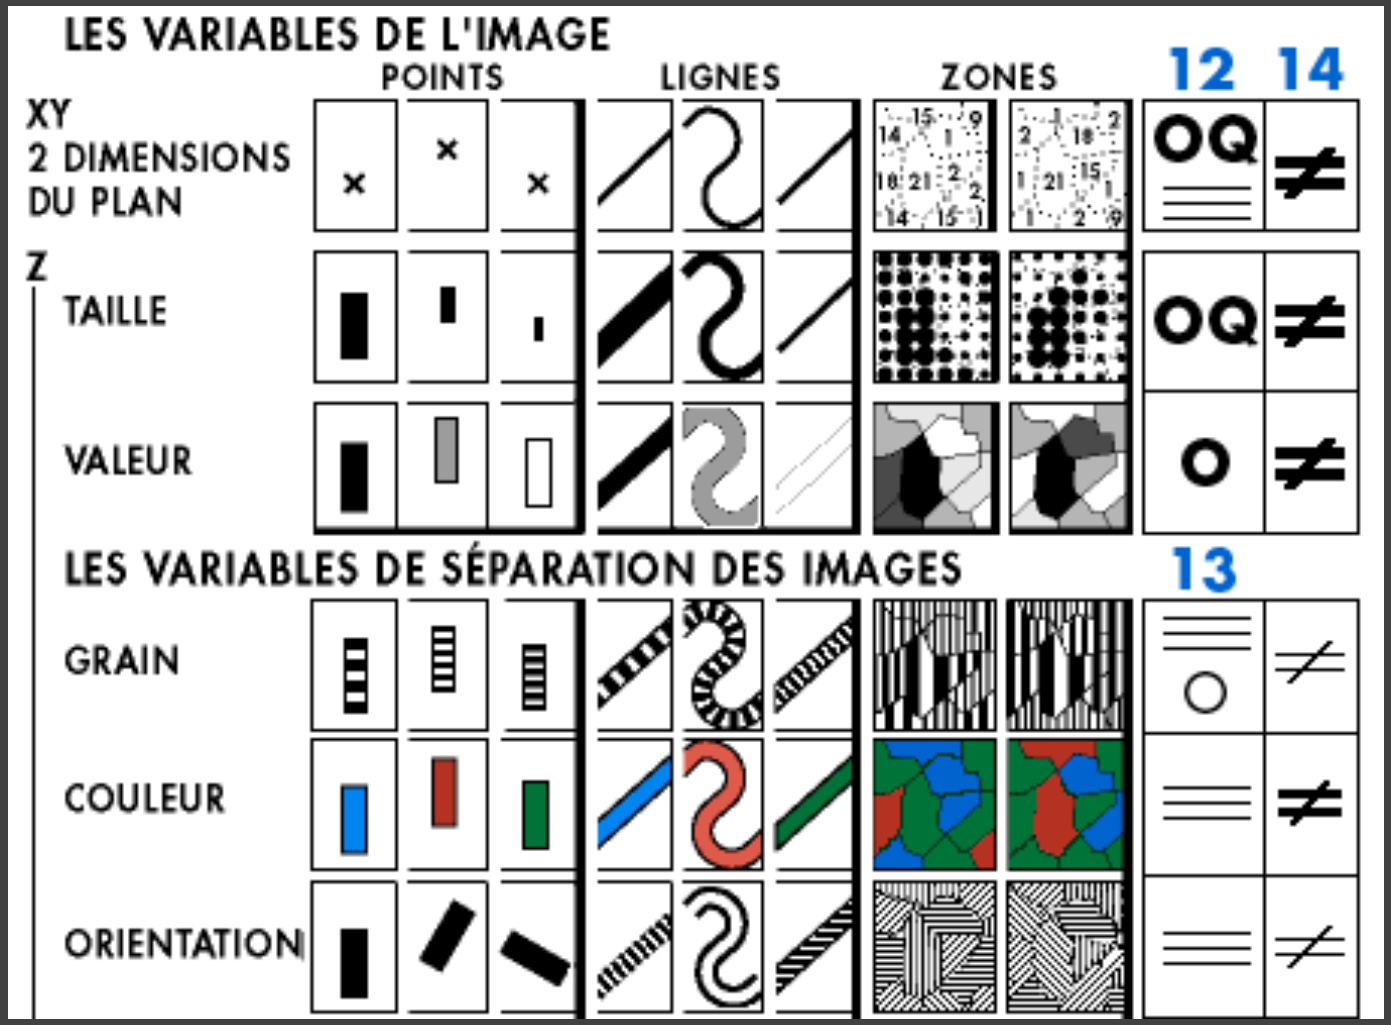
   What do people perceive / comprehend?
   How do visualizations inform mental models?

2. **Develop principles and techniques** for creating effective visualizations and supporting analysis

   Leverage perception & augment cognition
   Improve ties between visualization & mental model

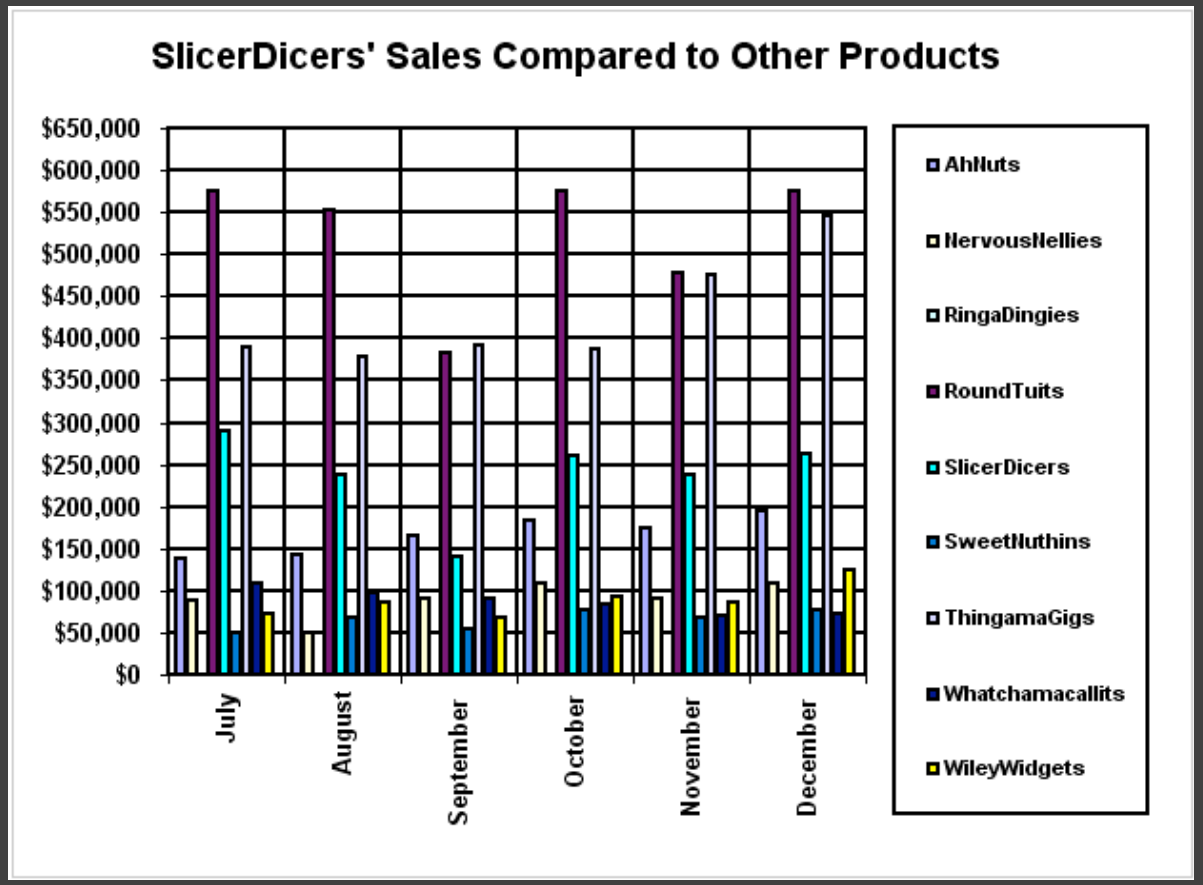
Course Topics

Data and Image Models

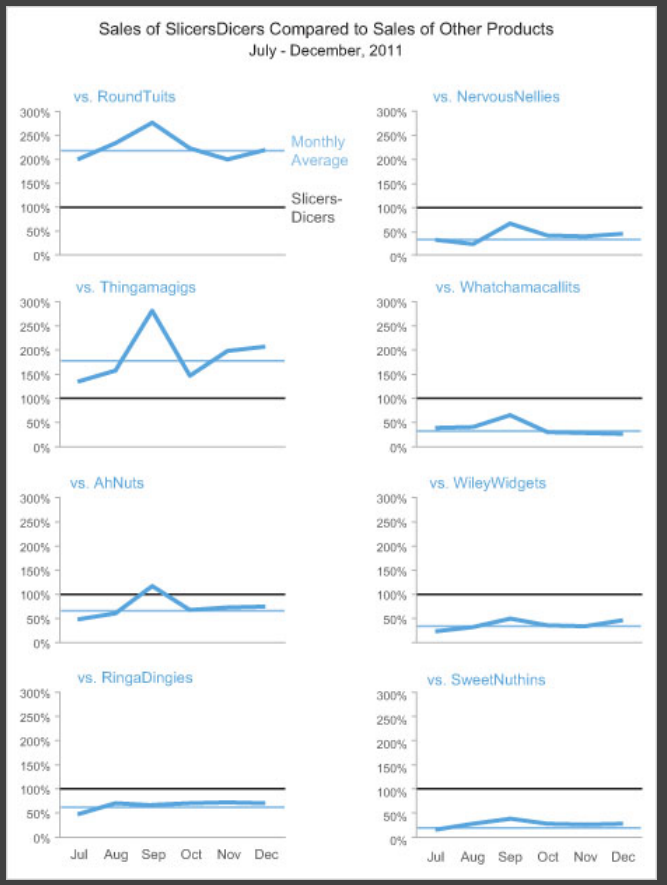


Sémiologie Graphique [Bertin 67]

Visualization Design

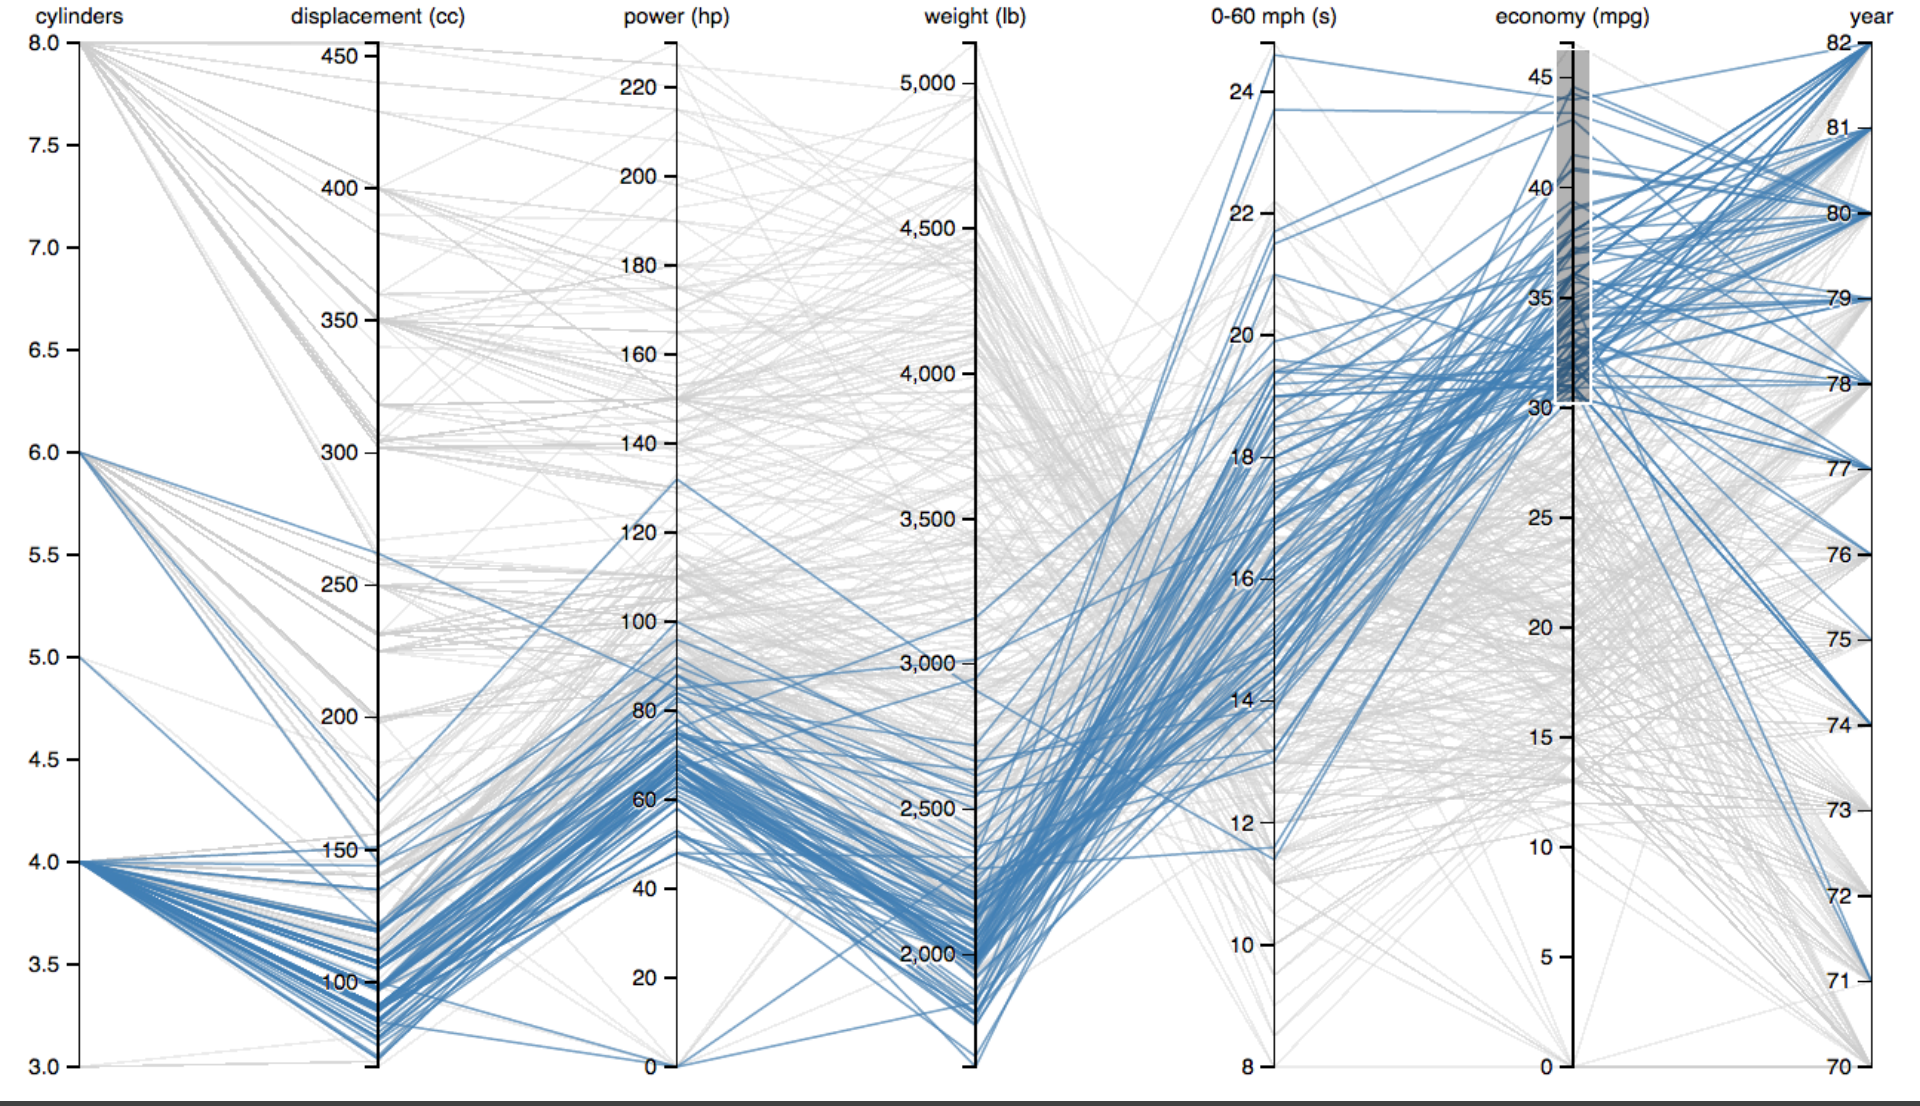


Problematic design

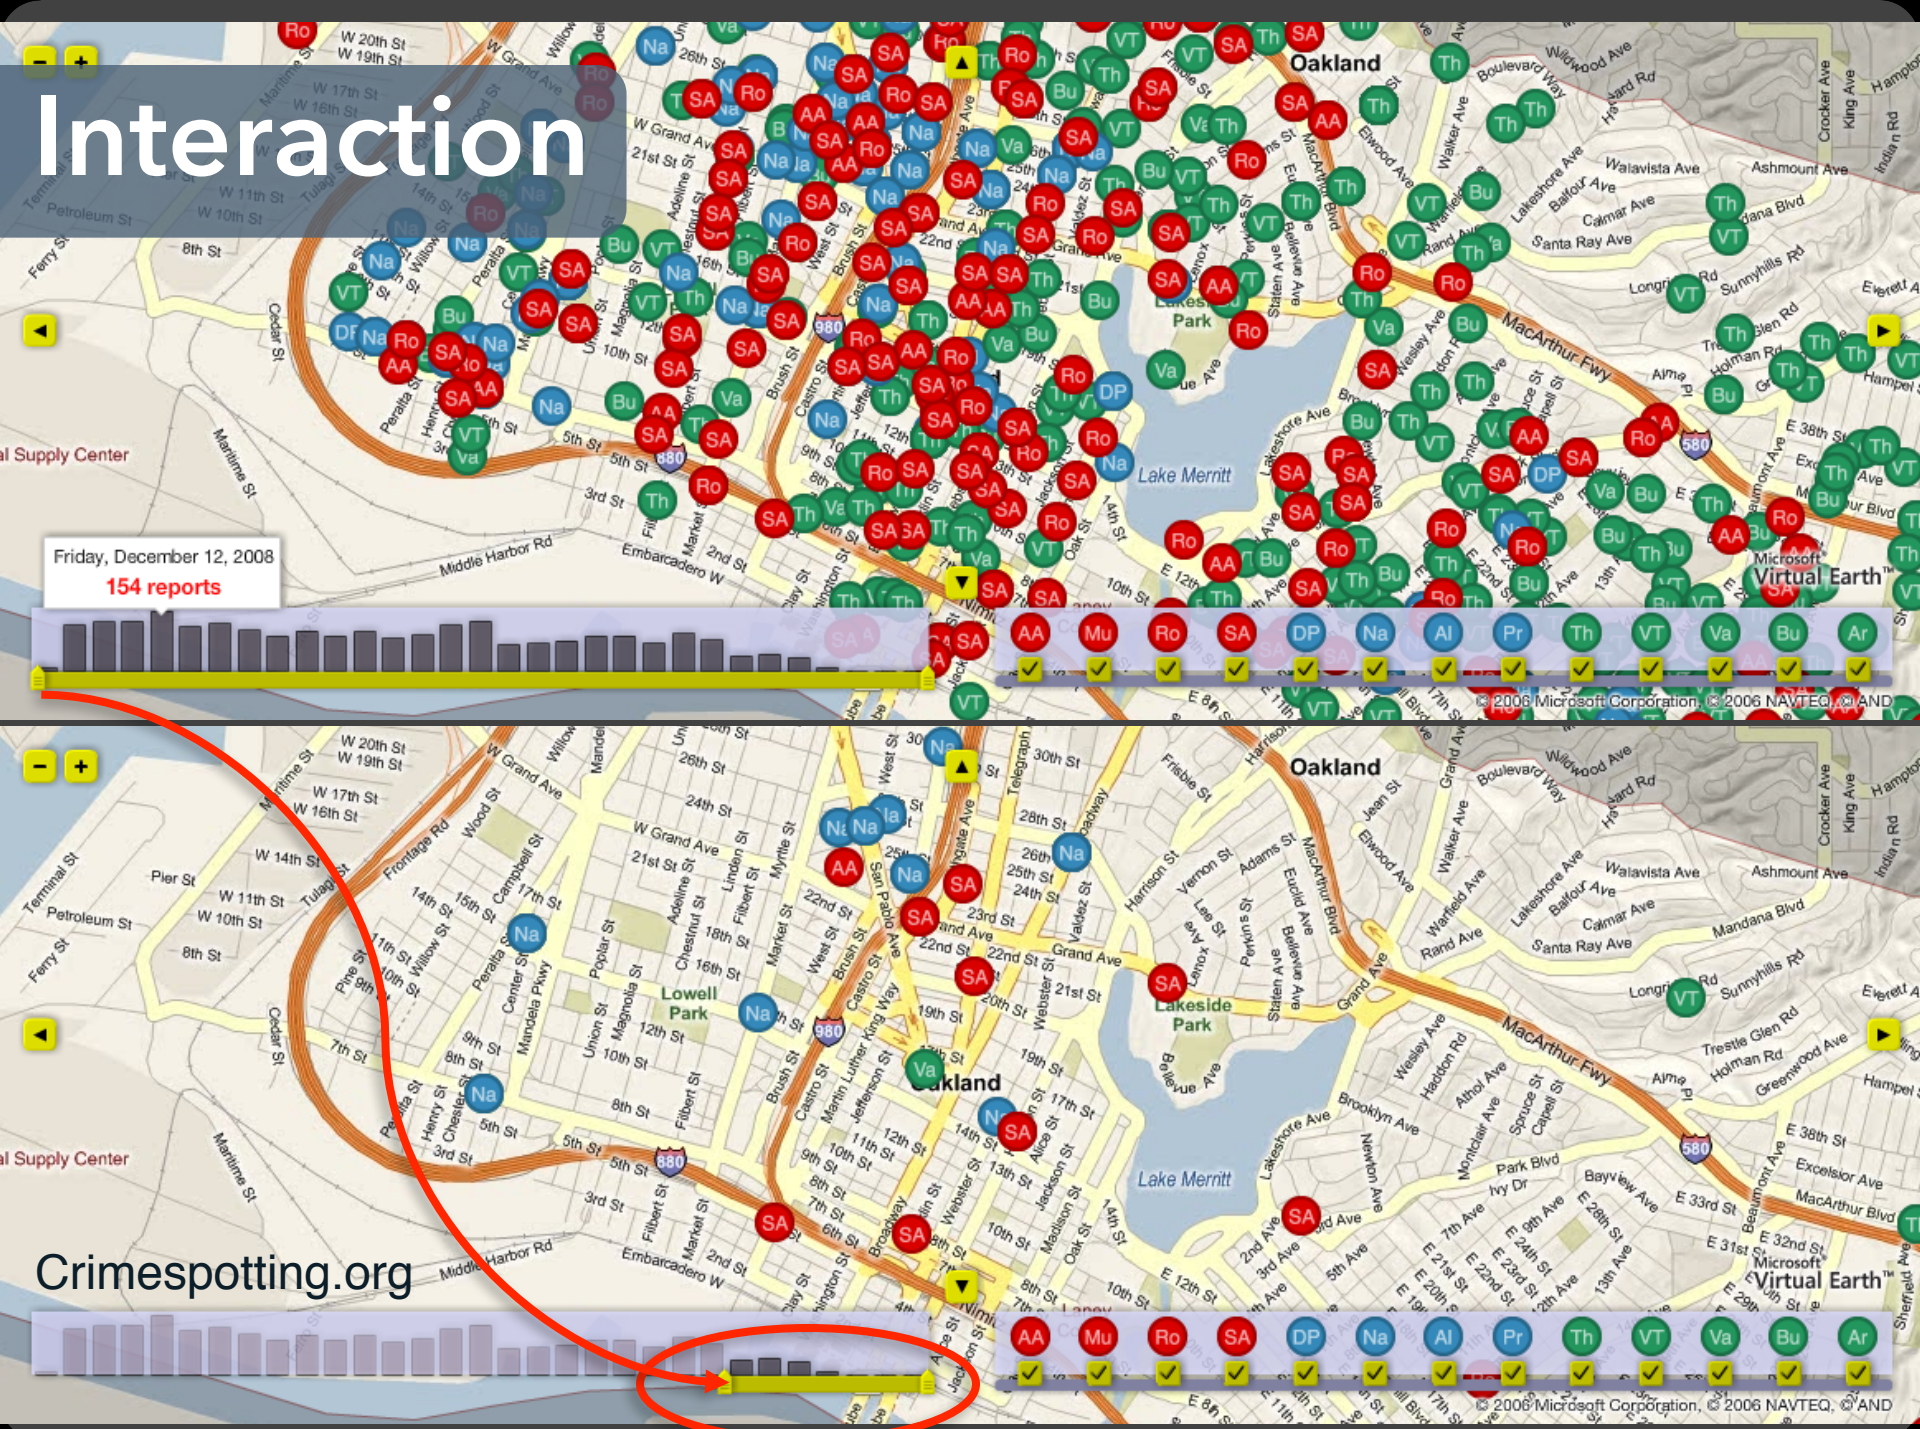


Redesign

Exploratory Data Analysis



Interaction



Maps

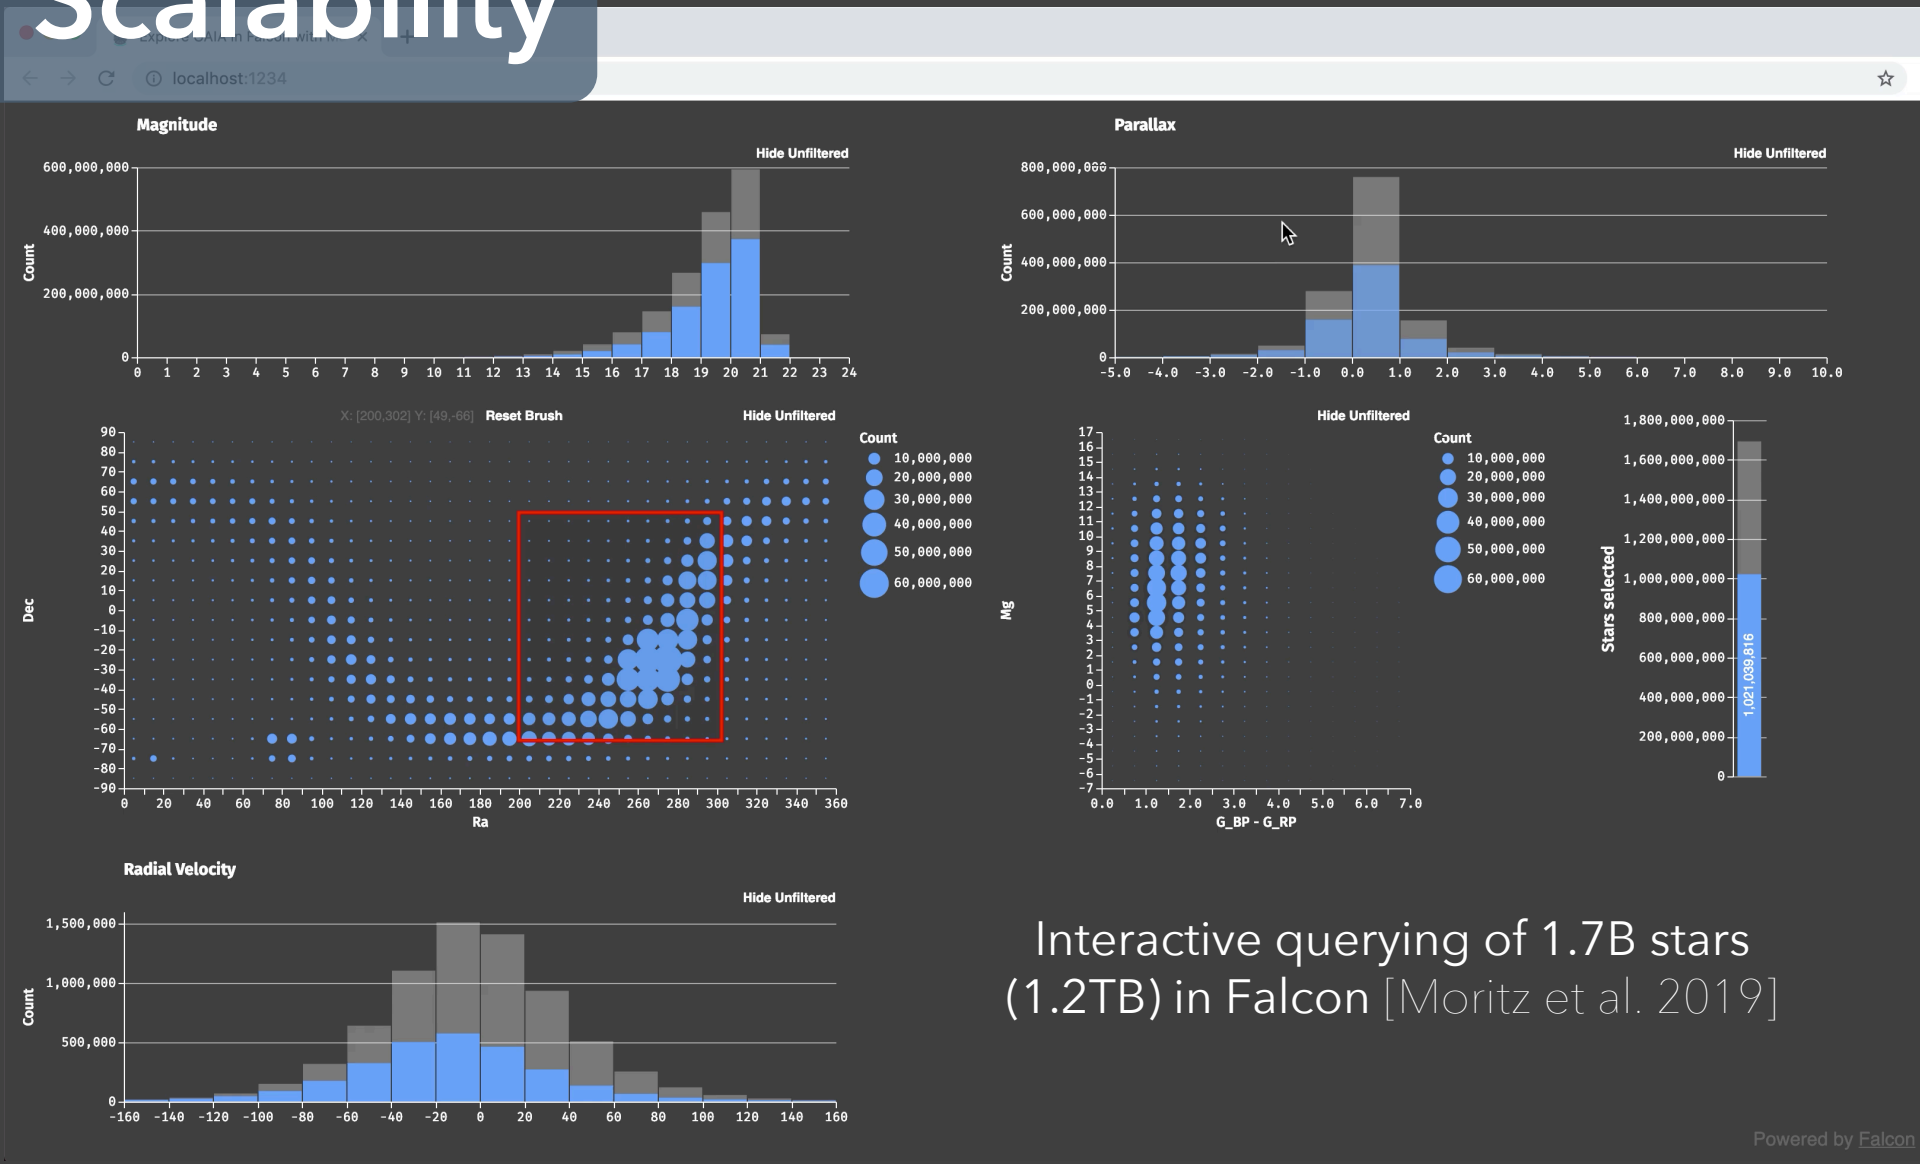
About	[Some know me as danah...] I'm a geek, an activist and an academic, fascinated by people and society. I see life as a very large playground and enjoy exploring its intricacies. I revel in life's chaos, while simultaneously providing my own insane element. My musings: http://www.zephoria.org/thoughts/
Want to Meet	Someone who makes life's complexities seem simply elegant.

Scalability



Interactive querying of 1.7B stars (1.2TB) in Falcon [Moritz et al. 2019]

Powered by Falcon

Narrative

Recent elections have placed a heavy emphasis on "swing states" — Ohio, Florida and the other competitive states. Yet the margin between the Democratic and Republican parties. A look at how the states stacked up in the 2012 election and how they have shifted over past elections.

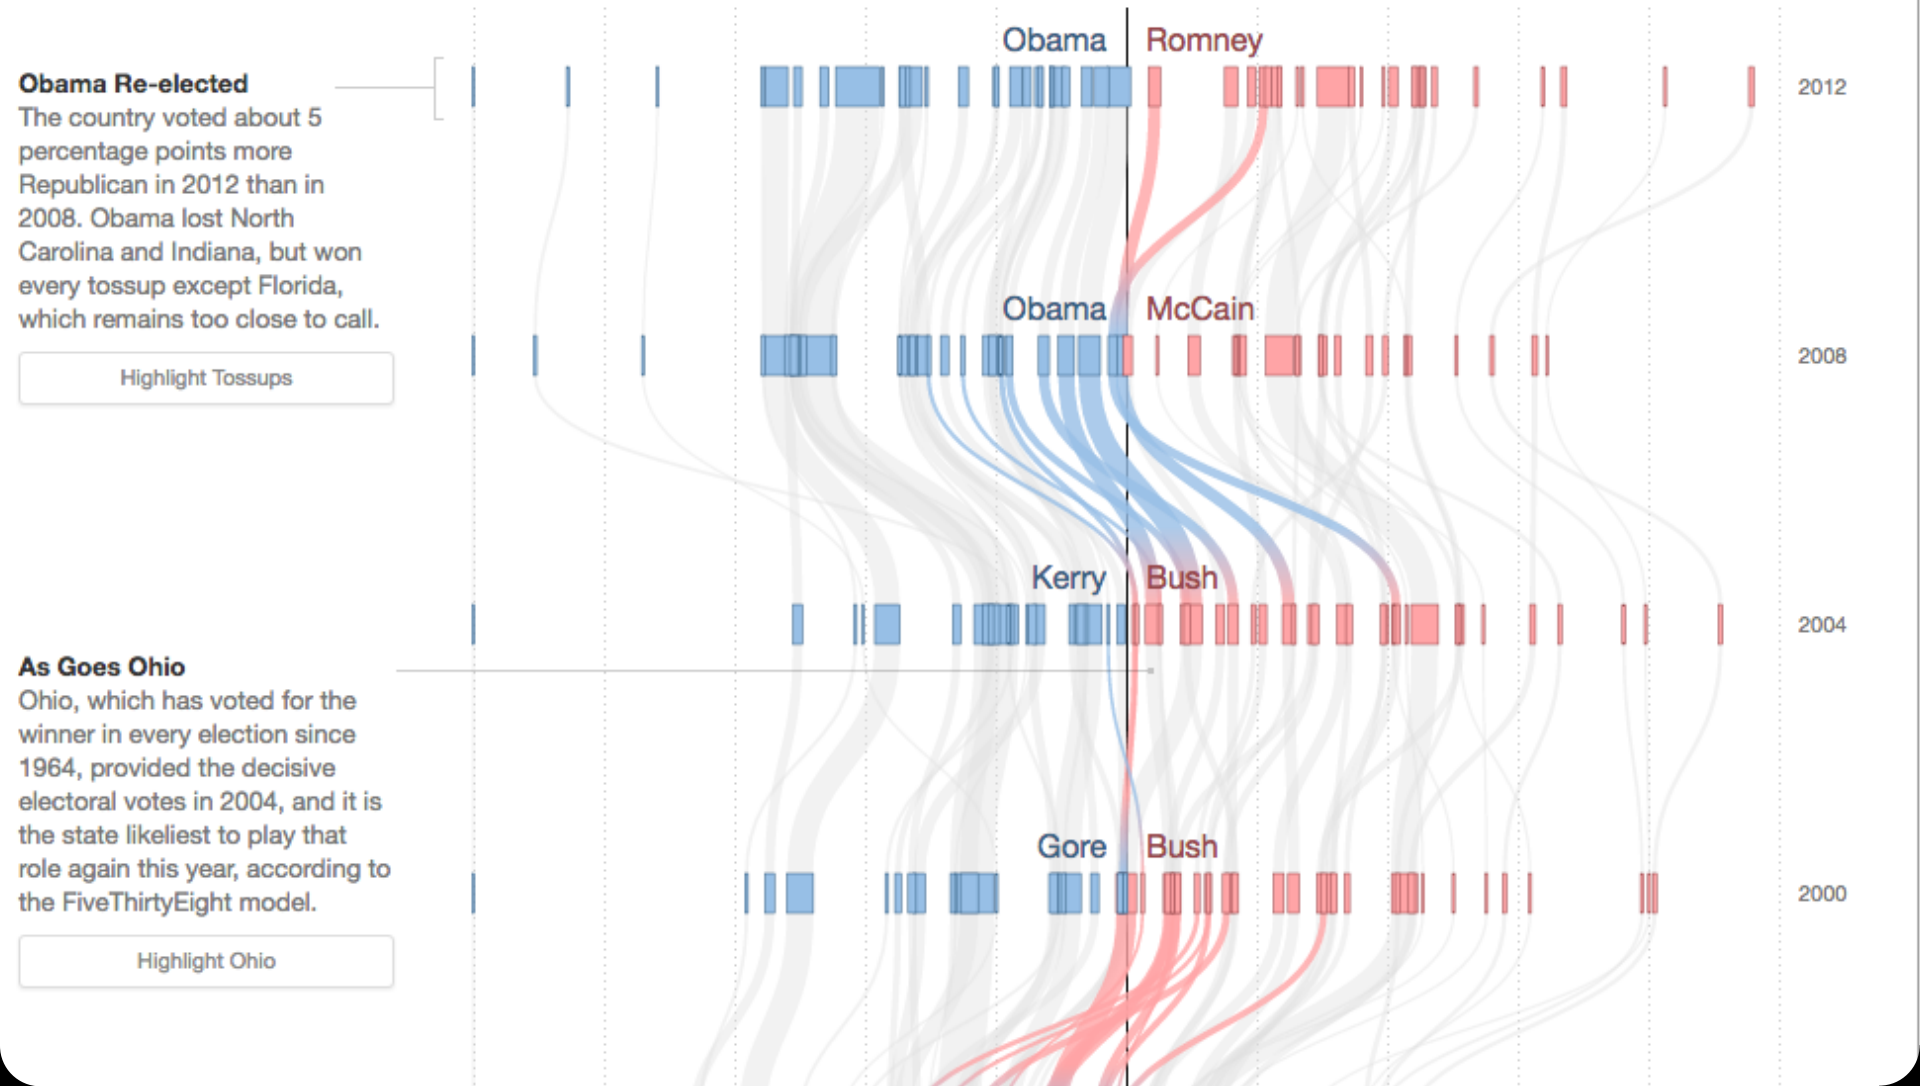
Each box represents a state sized by number of electoral votes.

Each curve shows how much it shifted left or right between elections

Chart **Size of Lead** | Chart **Electoral Votes**

← MORE DEMOCRATIC | MORE REPUBLICAN →

≥50% +40% +30% +20% +10% | +10% +20% +30% +40% ≥50%



Obama Re-elected
The country voted about 5 percentage points more Republican in 2012 than in 2008. Obama lost North Carolina and Indiana, but won every tossup except Florida, which remains too close to call.

Highlight Tossups

As Goes Ohio
Ohio, which has voted for the winner in every election since 1964, provided the decisive electoral votes in 2004, and it is the state likeliest to play that role again this year, according to the FiveThirtyEight model.

Highlight Ohio

Course Mechanics

You should expect to:

1. *Evaluate and critique* visualization designs
2. *Learn* visualization techniques & theory
3. *Implement* interactive data visualizations
4. *Develop* a substantial visualization project

Lectures & Office Hours

All lectures will be in-person but also recorded via zoom.

Please attend lecture in person. But do **NOT** attend if you feel ill.

Office hours will be held in person or on Zoom.

Links are available on Canvas for virtual office hours.

We strongly encourage using Ed to post questions and seek help!

Readings

From books, notebooks, and linked articles.

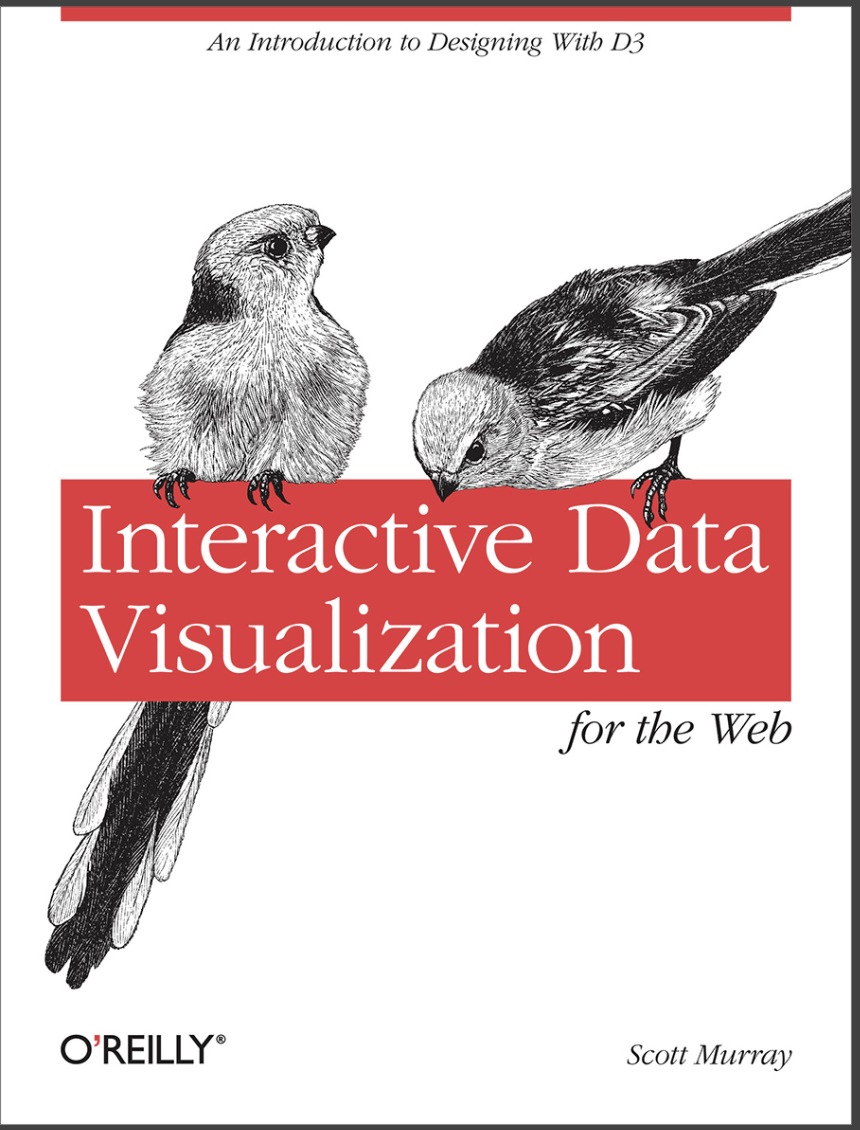
Material in class will loosely follow readings.

Readings should be read by start of class.

Post comments & quizzes on class forum.

- One comment per week (up through week 8).
- Post comments by Friday 11:59pm.
- You have 1 “pass” for the quarter.

Textbook

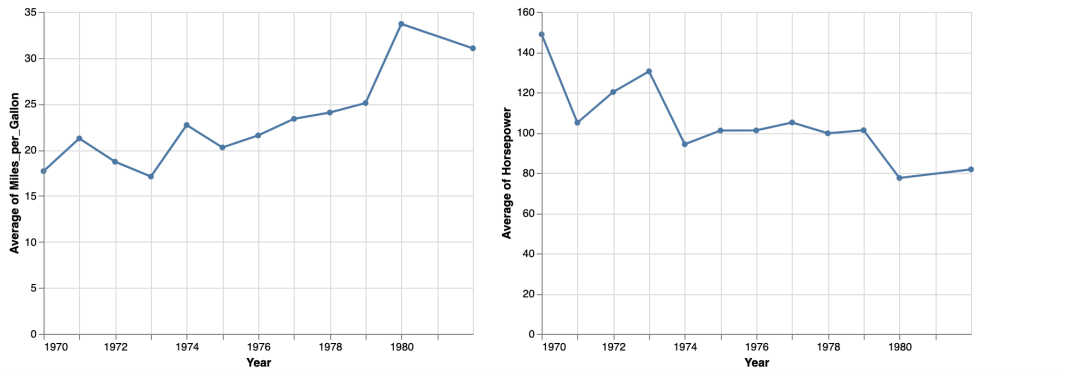


Interactive Data Visualization for the Web, 2nd Edition

For learning D3!
Book available online.
Code / examples on GitHub.

We will be using **D3 v7**.
https://d3js.org

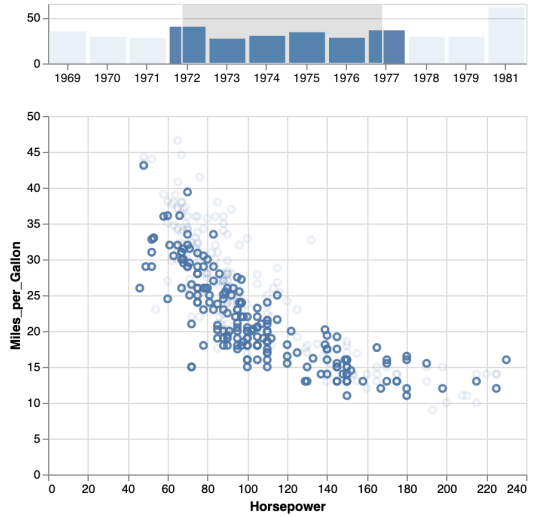
Interactive Vega-Lite Notebooks



```
{
  const mpg = vl.markLine().data(cars).encode(
    vl.x().fieldT('Year'),
    vl.y().average('Miles_per_Gallon')
  );

  const hp = mpg.encode(vl.y().average('Horsepower'));

  return vl.hconcat(
    vl.layer(mpg, mpg.mark('circle')),
    vl.layer(hp, hp.mark('circle'))
  ).render();
}
```



```
{
  // create an interval selection over an x-axis encoding
  const brush = vl.selectInterval().encodings('x');

  // determine opacity based on brush
  const opacity = vl.opacity().value(0.1)
                    .if(brush, vl.opacity().value(0.9));
```

Hands-on engagement with course concepts and tools using Observable (JavaScript) notebooks.

Assignments

CP Class Participation (10%)

A1 Expository Visualization (10%) - *Due 10/10*

A2 Deceptive Visualization (15%) - *Due 10/19*

Peer Review (5%) - *Due 10/24*

A3 Interactive Prototype (20%) - *Due 11/4*

Peer Review (5%) - *Due 11/15*

FP Final Project (35%)

Proposal - *Due 11/16*

Demonstration Video - *Due 12/7*

Final Prototype - *Due 12/12*

Grading Philosophy

A *good* submission gets a *good score* (A-), but a *great score* requires more effort.

Example: Typical A1 grades

Everyone starts with a high score (for example, 9/10).

Then, we *deduct* points for errors. We also *add* points for going above and beyond the assignment requirements.

The median score for A1 is typically 8.5 out of 10 (considered an A-).

Final Project

Produce an **explorable visual explanation**

Initial **prototype** and **design review**

Final deliverables and **video presentation**

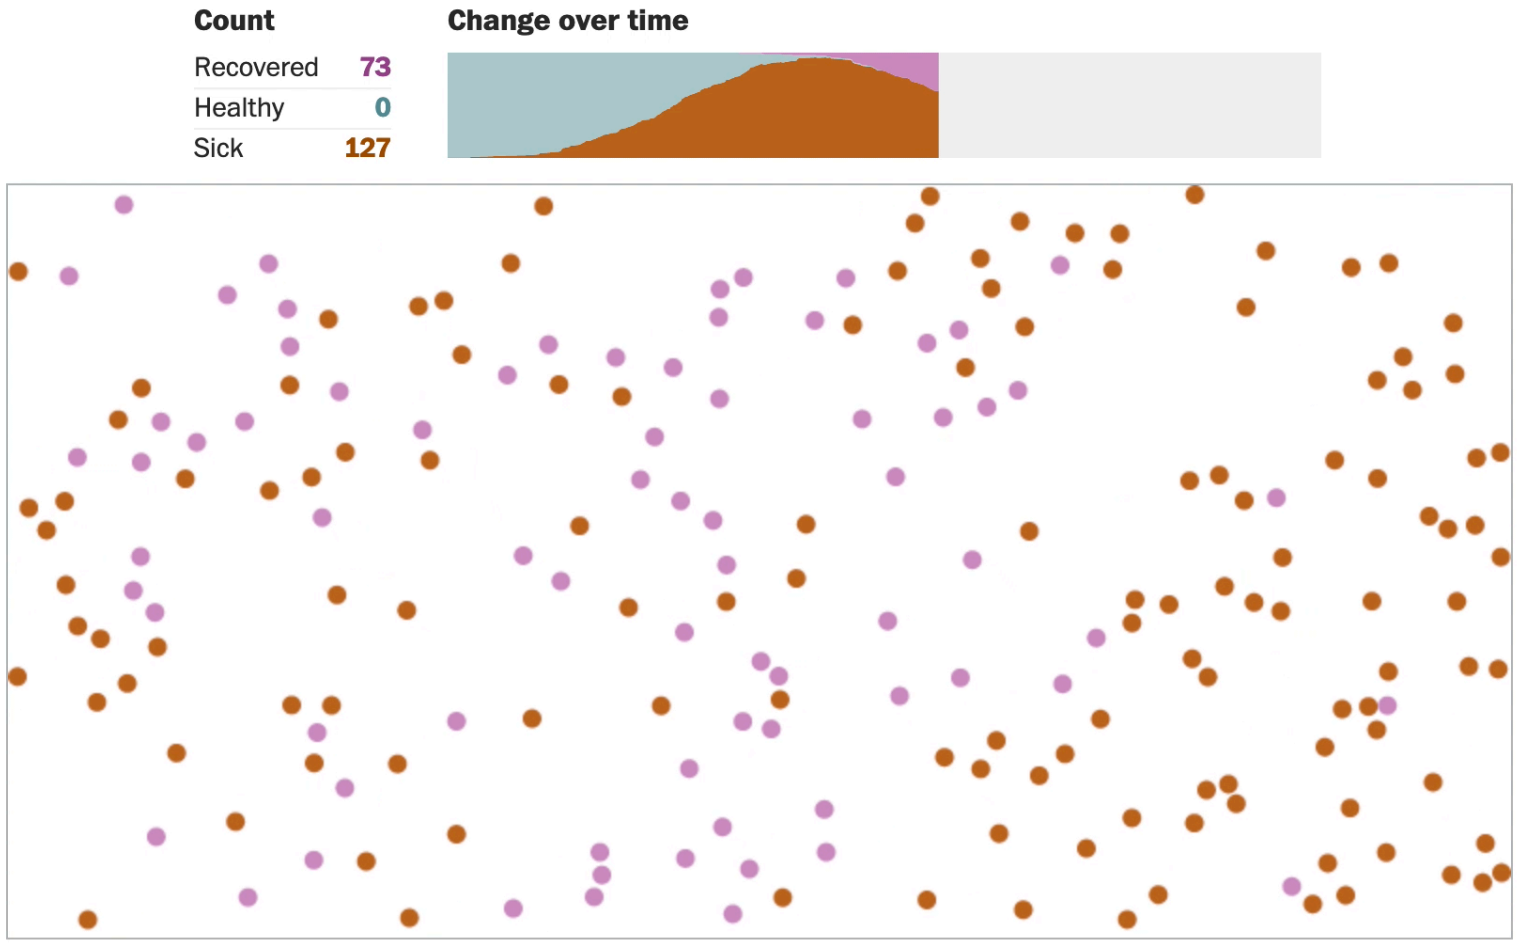
Submit and **publish online** (GitLab)

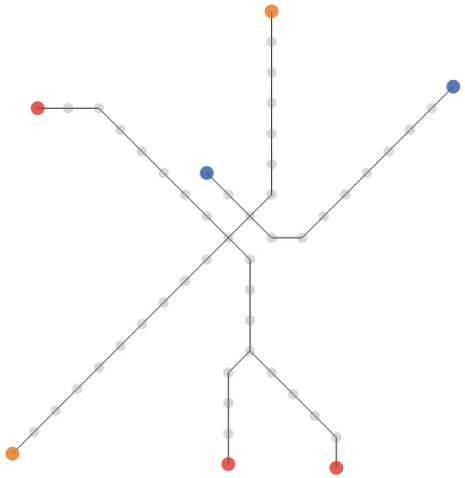
Projects from **previous classes** have been:

- Published as research papers
- Shared widely (some in the New York Times!)
- Released as successful open source projects

Why outbreaks like coronavirus spread exponentially, and how to “flatten the curve”

Harry Stevens, Washington Post 2020

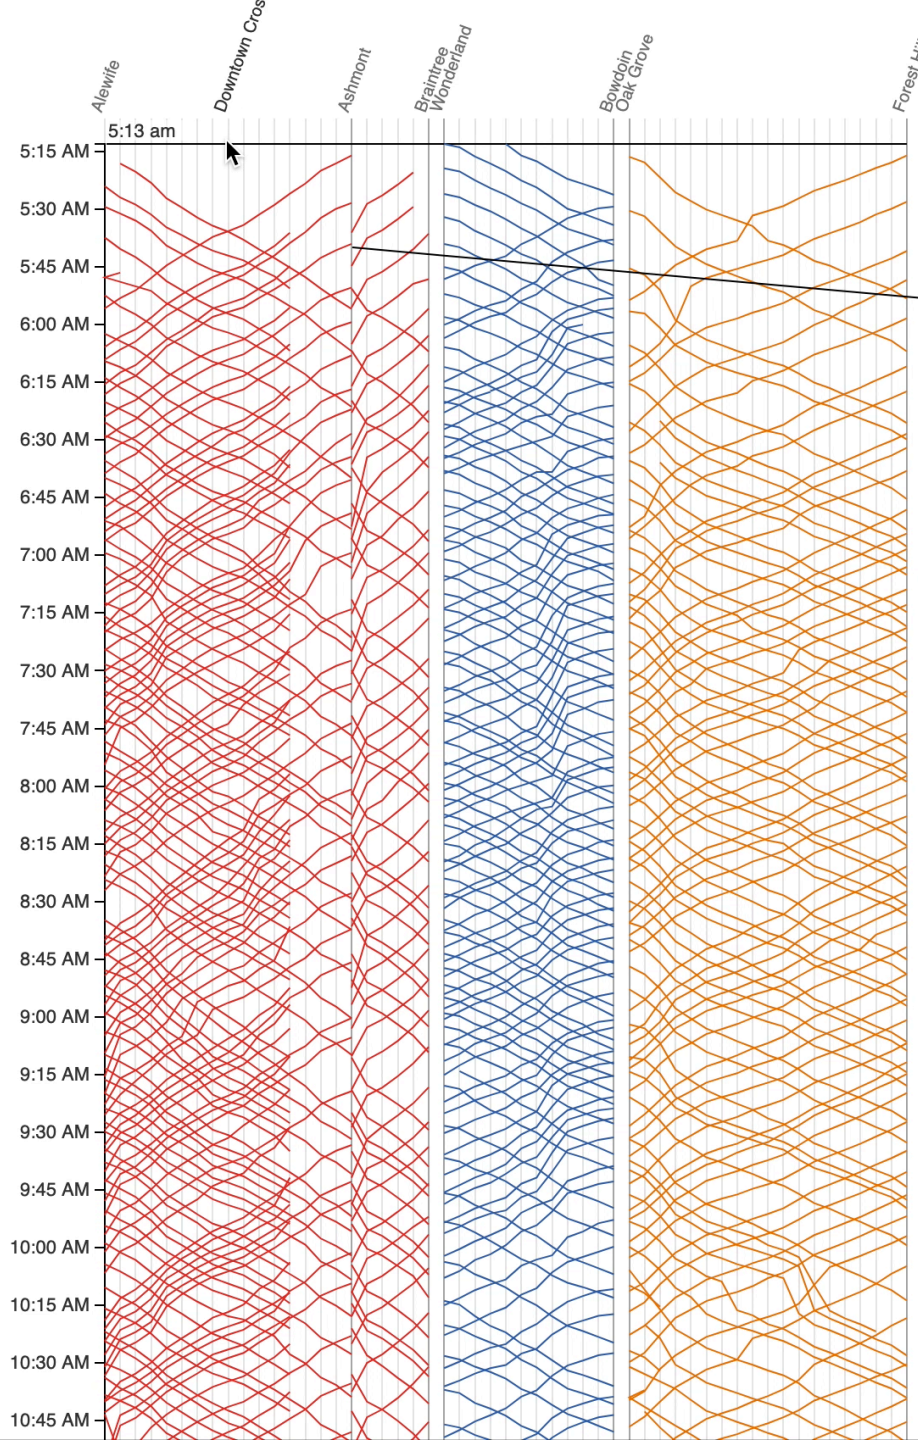




Locations of each train on the red, blue, and orange lines at 5:13 am. Hover over the diagram to the right to display trains at a different time.

Trains are on the right side of the track relative to the direction they are moving.

See the morning rush-hour, midday lull, afternoon rush-hour, and the evening lull.



Service starts at 5AM on Monday morning. Each line represents the path of one train. Time continues downward, so steeper lines indicate slower trains.

Since the red line splits, we show the Ashmont branch first then the Braintree branch. Trains on the Braintree branch "jump over" the Ashmont branch.

Train frequency increases around 6:30AM as morning rush hour begins.

MBTA Viz

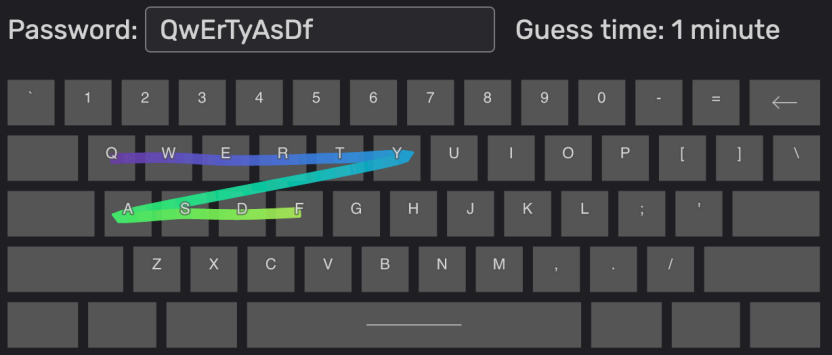
Barry & Card

KEYBOARD WALKING

Passwords with a “keyboard walking” pattern start at an arbitrary key, then move in a direction (usually right or down) while continuing to hit keys. Sometimes this is combined with holding down the SHIFT key, so that some characters are uppercase or symbols to improve complexity.

While the generated password may seem to be random and unhackable, password crackers check for these keyboard patterns and guess them early on.

Many passwords in the leaked passwords dataset have a spatial pattern. Other than the numeric passwords like 123456, common keyboard walking offenders include qwerty and 1qaz@wsx.



Semantic Passwords

Vishal Devireddy (CSE 512, Spring '21)

Coming Up Soon!

Observable + Data Tutorial

Friday Sep. 30, 4:30-6pm

Introduction to Observable notebooks, JavaScript basics, and data management and transformation, led by Firn and Andy.
Zoom link is available on Canvas.
The tutorial will be recorded.

A1: Expository Visualization

Design a static visualization for a data set.

The climate of a place can have a tremendous impact on people's lived experience. You will examine average monthly climate measurements for six major U.S. cities, roughly covering the edges of the continental United States.

You must choose the message you want to convey. What question(s) do you want to answer? What insight do you want to communicate?

A1: Expository Visualization

Pick a **guiding question**, use it to title your vis.
Design a **static visualization** for that question.
You are free to **use any tools** (inc. pen & paper).

Deliverables (upload on Gradescope; see A1 page)
Image of your visualization (PNG or JPG format)
Short description + design rationale (≤ 4 paragraphs)

Due by **11:59 pm, Mon Oct 10**.
