

CSE 442 - Data Visualization

Design Review & Critique

Jeffrey Heer University of Washington

Final Project

Final Project

Produce an **explorable visual explanation**

Initial **prototype** and **design review**

Final deliverables and **video presentation**

Submit and **publish online** (GitHub)

Projects from **previous classes** have been:

- Published as research papers
- Shared widely (some in the New York Times!)
- Released as successful open source projects

Final Project Theme

Explorable Explanations

Goal: produce an interactive web page that explains a complex subject to the reader.

The topic could be a scientific phenomenon, a computer science algorithm, a mathematical concept, a sociological theory, or another topic that you're passionate about.

Focus on creating one or more interactive diagrams interlinked with explanatory text or annotations. We urge you to focus on a highly visual or interactive experience. Do not expect a viewer to read large amounts of article text.

Inspiration...

Why outbreaks like coronavirus spread exponentially, and how to “flatten the curve”

Harry Stevens, Washington Post 2020

Count

Recovered **73**
Healthy **0**
Sick **127**

Change over time

Locations of each train on the [red](#), [blue](#), and [orange](#) lines at 5:13 am. Hover over the diagram to the right to display trains at a different time.

Trains are on the right side of the track relative to the direction they are moving.

See the [morning rush-hour](#), [midday lull](#), [afternoon rush-hour](#), and the [evening lull](#).

MBTA Viz

Barry & Card

Service starts at 5AM on Monday morning. Each line represents the path of one train. Time continues downward, so steeper lines indicate slower trains.

Since the red line splits, we show the Ashmont branch first then the Braintree branch. Trains on the Braintree branch "jump over" the Ashmont branch.

Train frequency increases around 6:30AM as morning rush hour begins.

KEYBOARD WALKING

Passwords with a “keyboard walking” pattern start at an arbitrary key, then move in a direction (usually right or down) while continuing to hit keys. Sometimes this is combined with holding down the `SHIFT` key, so that some characters are uppercase or symbols to improve complexity.

While the generated password may seem to be random and unhackable, password crackers [check for these keyboard patterns](#) and guess them early on.

Many passwords in the leaked passwords dataset have a spatial pattern. Other than the numeric passwords like `123456`, common keyboard walking offenders include `qwerty` and `1qaz@wsx`.

Semantic Passwords

Vishal Devireddy (CSE 512, Spring '21)

Final Project Schedule

<i>Proposal</i>	Fri Feb 16
<i>Prototype</i>	Wed Feb 28
<i>Demo Video</i>	Wed Mar 6
<i>Video Showcase</i>	Thu Mar 7 (in class)
<i>Deliverables</i>	Tue Mar 12

Logistics

Final project description posted online

Work in groups of up to 4 people

Start determining your project topic!

Tips for a Successful Project

Choose a **well-scoped topic** to explain.

Be clear about what you want people to learn.

Consider **multiple design alternatives**.

Prototype quickly (use Tableau, R, *etc...*).

Seek feedback (representative users, peers, ...).

Even informal usage can provide insights.

Choose **appropriate team roles**.

Start early (and read the suggested paper!)

A3 Prototype Peer Reviews

Critique Questions

What is the purpose of the visualization?

Does it serve its purpose well?

Does it convey the data honestly?

Does it show the appropriate level of detail?

Are expressive & effective visual encodings used?

Do the interactions aid understanding of the data?

Is the design well-organized? Is it innovative?

What would you like to change or refine?

How might things be done differently?

I Like... / I Wish... / What If?

I LIKE...

Praise for design ideas and/or well-executed implementation details. *Example: "I like the navigation through time via the slider; the patterns observed as one moves forward are compelling!"*

I WISH...

Constructive statements on how the design might be improved or further refined. *Example: "I wish moving the slider caused the visualization to update immediately, rather than the current lag."*

WHAT IF?

Suggest alternative design directions, or even wacky half-baked ideas. *Example: "What if we got rid of the slider and enabled direct manipulation navigation by dragging data points directly?"*

I Like... / I Wish... / What If?

I LIKE...

The goal of supporting developers to improve decoupling.

The "cut-line" interaction to isolate links of interest.

The use of gradients to show edge directionality.

I WISH...

I could author multiple cut-lines for compound queries.

More details on demand were shown upon mouse-hover.

WHAT IF?

You could incorporate information from applications that use this code? How often are different modules used?

I Like... / I Wish... / What If?

I LIKE...

The 1D histograms on the parallel coordinates display.
The use of brushing and linking between components.
Attention to small details, such as white masks for axis labels.

I WISH...

Data fields were configured to focus on the most relevant features.
The interaction was faster (lower latency).
A color-blind friendly color palette had been used.

WHAT IF?

One tried to visualize the data using a technique other than parallel coordinates? What encodings work best for the intended audience?

Critique Categories

Visualization Design

Choice of visual encodings (expressive, effective?)
Is the appropriate information visible by default?

Interaction Design

Choice of interaction techniques
Do they enhance understanding of the data?
Usability, discoverability, performance

Overall Design Quality

Organization, legibility, fitness for chosen goals

A3 Peer Reviews

Review **three** A3 submissions (assigned on Canvas)

Submit **three** critique forms by **Wed 2/21, 11:59**

Follow **I like / I wish / What if?** format for critiques
Be positive! Be constructive! Share wild ideas!
