CSE 442 - Data Visualization

Evaluation

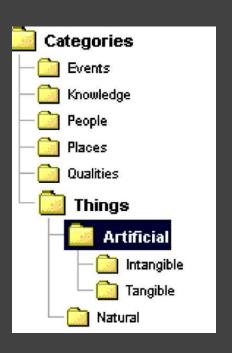

Jeffrey Heer University of Washington

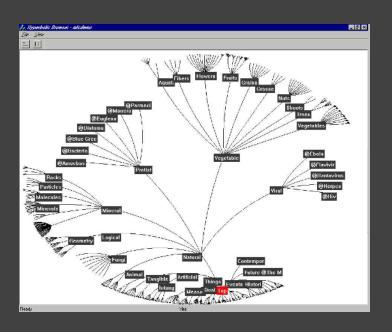

visualization is effective?

How do we determine if a

Example: Tree Browsers

VS.

Evaluation Methods

Inspection or Principled Rationale

Apply design heuristics, perceptual principles

Informal User Study

Have people use visualization, observe results

Controlled Experiment

Choose appropriate tasks / users to compare Choose metrics (time, error, what else?)

Evaluation Methods

Field Deployment or Case Studies

Observation and Interview Document effects on work practices

Theoretical Analysis

Algorithm time and space complexity

Benchmarks

Performance (e.g., interactive frame rates) Scalability to larger data sets

Topics

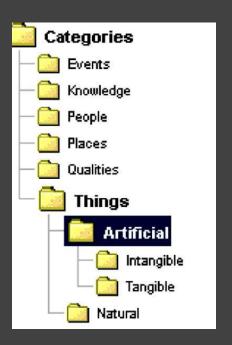

Focus+Context Tree Visualizations

Data Density of Time Series

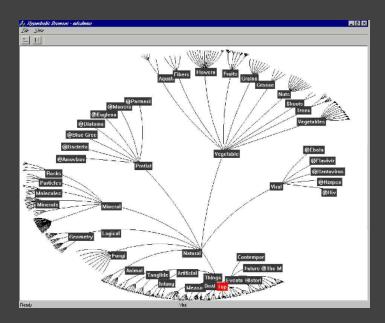

Discussion and Course Evaluation

Trees

The Great Browse-Off! [CHI 97]

VS.

Microsoft File Explorer

Xerox PARC Hyperbolic Tree

Xerox PARC researchers ran eye-tracking studies to investigate... [Pirolli et al 00]

Xerox PARC researchers ran eye-tracking studies to investigate... [Pirolli et al 00]

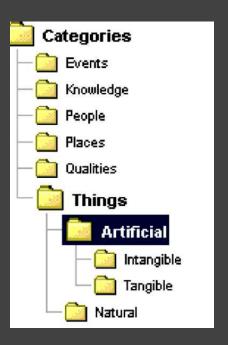

Subjects performed both retrieval and comparison tasks of varying complexity.

Xerox PARC researchers ran eye-tracking studies to investigate... [Pirolli et al 00]

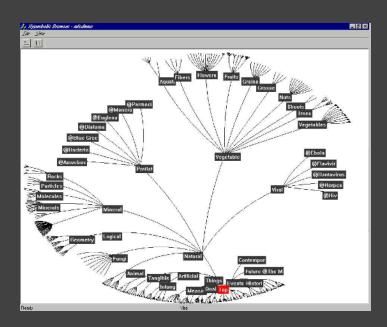

Subjects performed both retrieval and comparison tasks of varying complexity.

No significant performance differences were found across task conditions.

They read the labels!

VS.

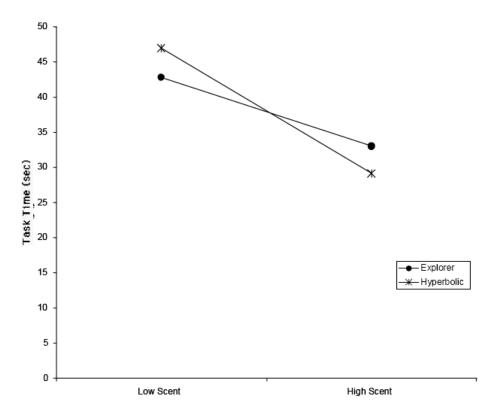

Microsoft File Explorer

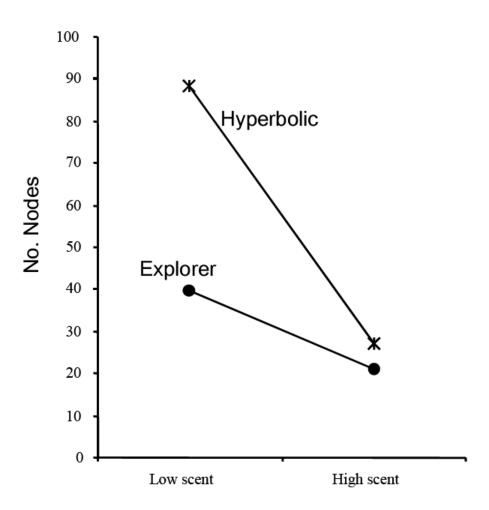

Xerox PARC Hyperbolic Tree

Information Scent: A user's (imperfect) perception of the value, cost, or access path of information sources obtained from proximal cues. [Pirolli & Card 99]

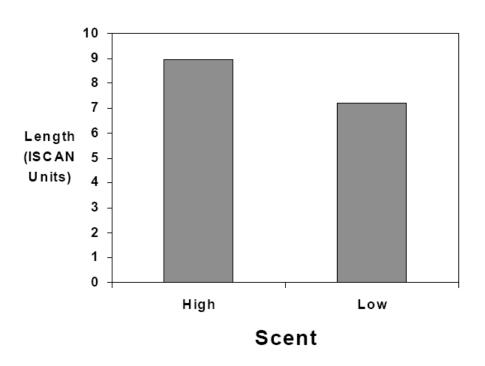

Information Scent: A user's (imperfect) perception of the value, cost, or access path of information sources obtained from proximal cues. [Pirolli & Card 99]

Operationalize as: the proportion of participants who correctly identified the location of the task answer from looking at upper branches in the tree.

An Adaptive Field of View?

More Evaluations

Evaluation of DOI Trees

DOITree vs. Windows Explorer [Budiu, AVI 06]

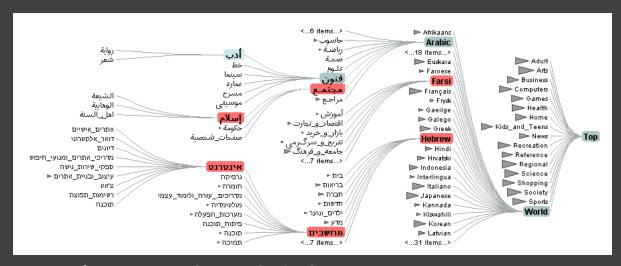

Nodes visited (avg) DOI:83 Exp:53 p<.005 Revisitation (avg) DOI:6.6 Exp:8.2 p<.005 Divergence (avg) DOI:4.6 Exp:3.9 p<.001

DOITree more forgiving to navigation errors **BUT** no significant difference in task time

DOITree vs. Google Directory [Pirolli, CHI 06] DOITree has superior task knowledge transfer

Support rapid visual scanning

Most people don't read in circles!

Degree of Interest Trees [Heer & Card 04]

People don't read in circles!

Showing more is not always better

Distractors can decrease task performance

Interaction with quality of information scent

People don't read in circles!

Showing more is not always better

Navigation cues critical to search

Informative labels or landmarks needed

Poor information scent undermines search

Lessons Learned

Both **task** and **data properties** (here, information scent) may interact with the visualization type in unexpected ways.

Equal **performance** in terms of accuracy or response time is **not the whole picture**. We often require more detailed study!

Spatial Navigation

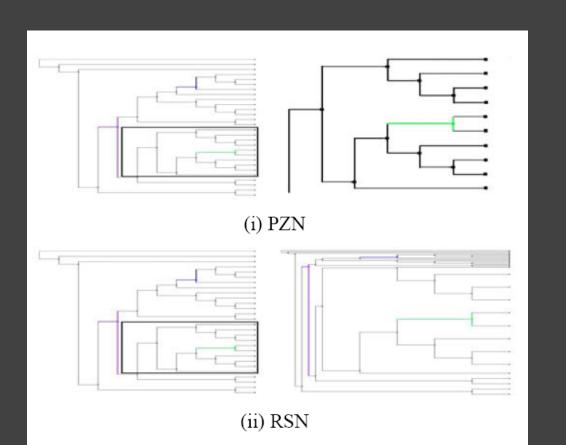

An Evaluation of Pan & Zoom and Rubber Sheet

Navigation with and without an Overview

Dmitry Nekrasovski, Adam Bodnar, Joanna McGrenere,

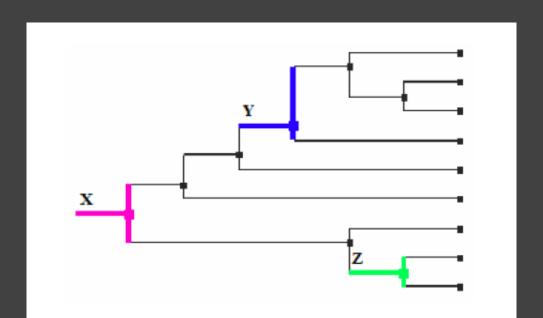

François Guimbretière, Tamara Munzner

Pan & Zoom vs. Rubber Sheet

Experimental Task

Compare topological distance between nodes in a dendrogram.

Experiment

Compare performance in 4 conditions:

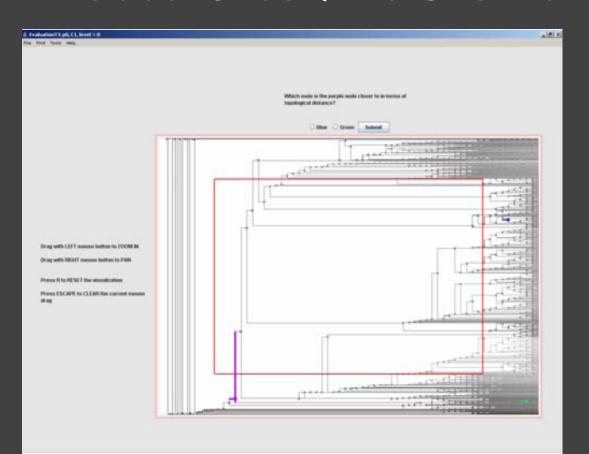

- 1. Pan & Zoom (no overview)
- 2. Pan & Zoom (with overview)
- 3. Rubber Sheet (no overview)
- 4. Rubber Sheet (with overview)

40 subjects (24F/16M), between 18-39 years old.

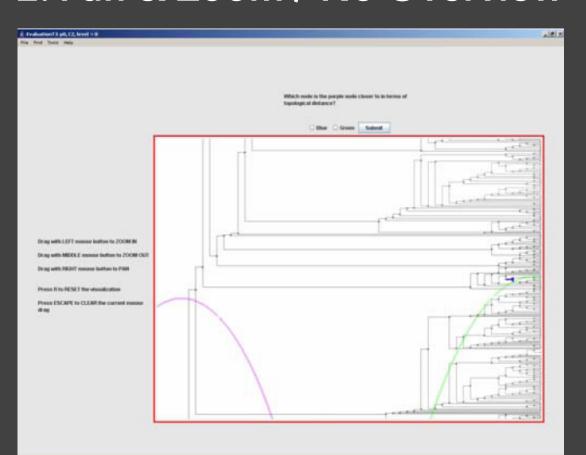

Right-handed, normal vision.

Between-subjects design.

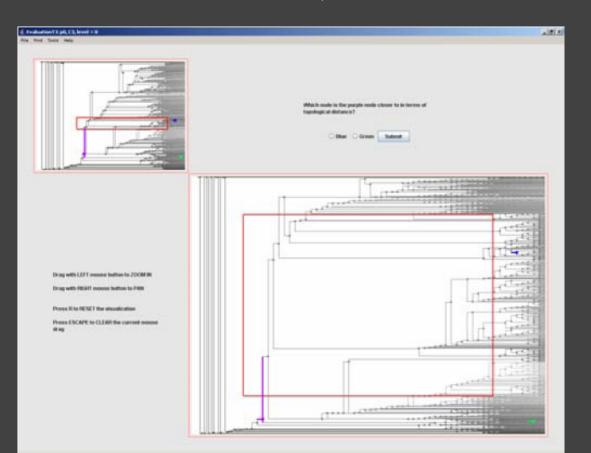

1. Rubber Sheet / No Overview

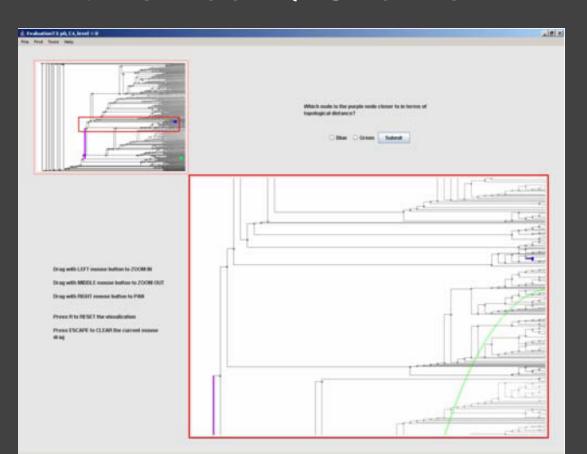

2. Pan & Zoom / No Overview

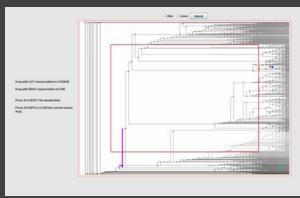

3. Rubber Sheet / Overview

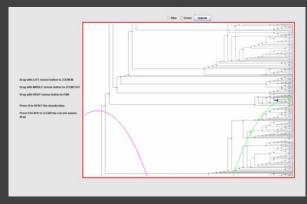

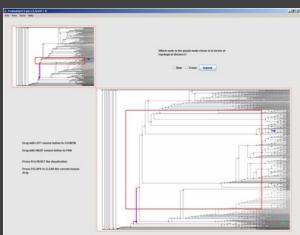

4. Pan & Zoom / Overview

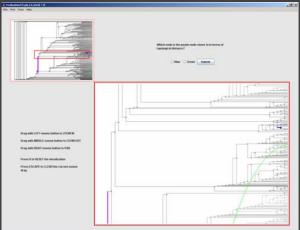

Which interface will perform best?

Hypotheses

- 1. RSN interfaces perform better than PZN interfaces independently of the presence or absence of an overview.
- 2. For RSN, the presence of an overview does not result in better performance.
- 3. For PZN, the presence of an overview results in better performance.

Results: H1 False

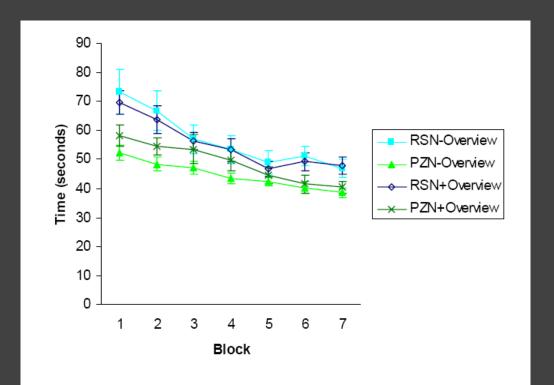

Figure 7: Mean completion times per trial for each interface by block in seconds (N=40).

Results: H2 True, H3 False

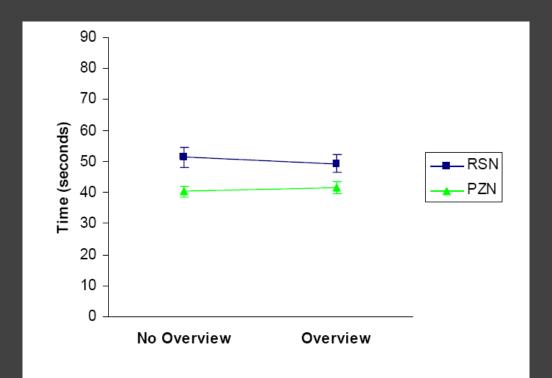

Figure 9: Block 7 mean per-trial completion times in seconds by navigation technique with and without an overview.

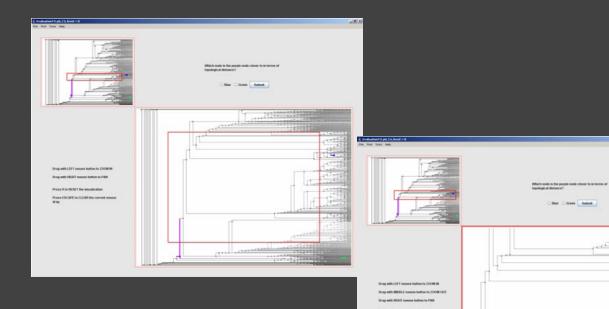

Results

R1. Pan & Zoom had lower completion times, navigation actions, resets, and reported mental demand.

R2. Overview has no significant impact on rubber sheet navigation, though it was reported to reduce physical demand.

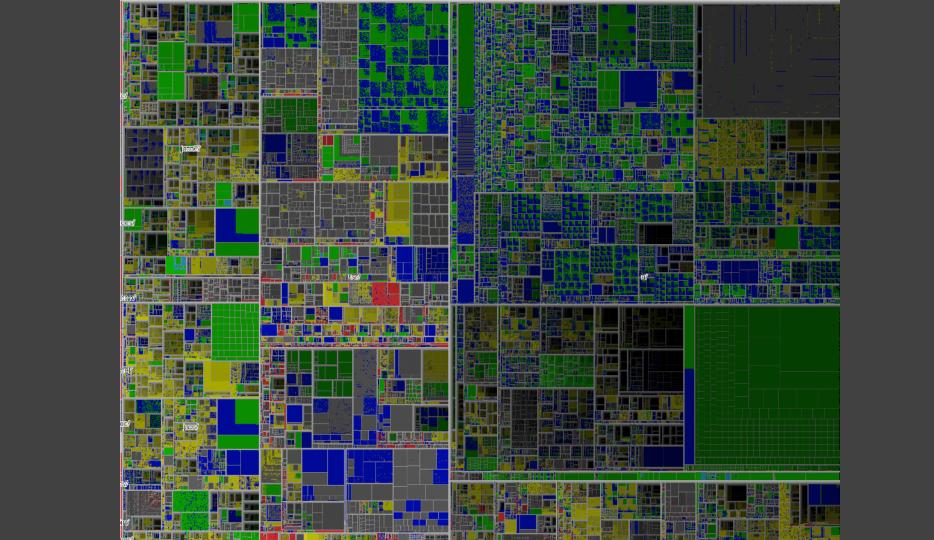

R3. Overview has no significant impact on pan & zoom navigation, though it was reported to reduce physical demand.

Thoughts?

Does this generalize for overview displays?

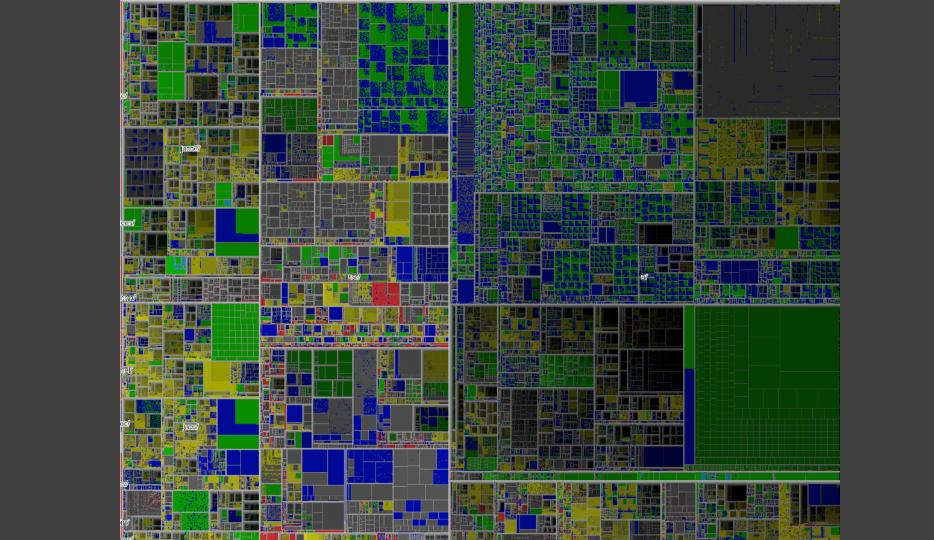

Data Density

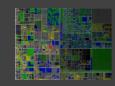

Data Density = $\frac{\text{(# entries in data)}}{\text{(area of graphic)}}$

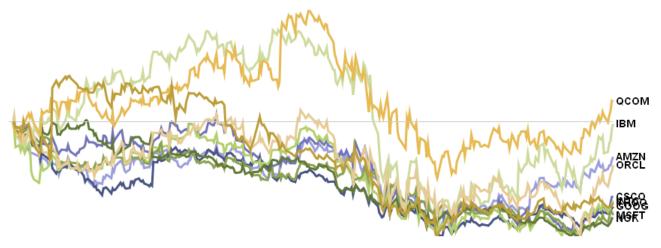

"Graphical excellence... gives to the viewer the greatest number of ideas in the shortest time with the least ink in the smallest space"

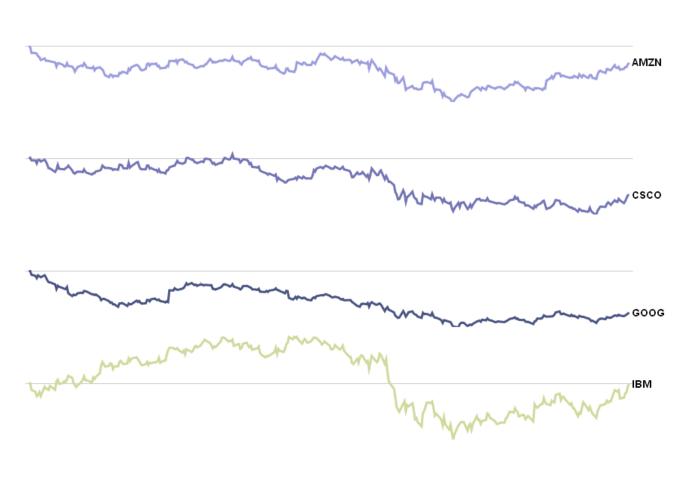

[Tufte 83]

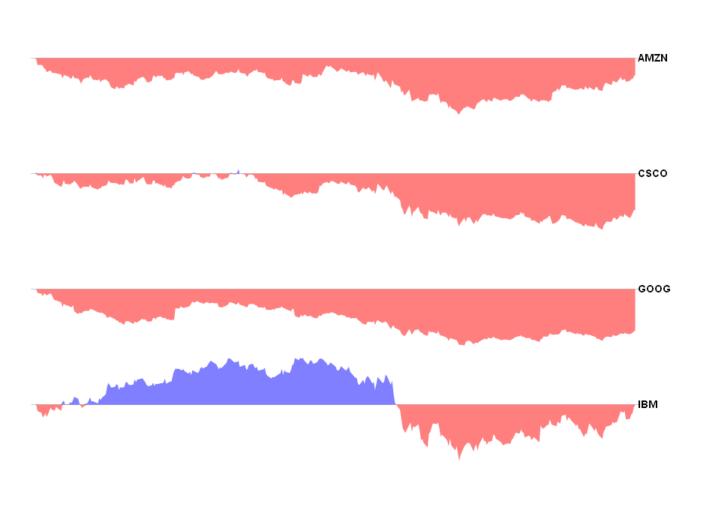

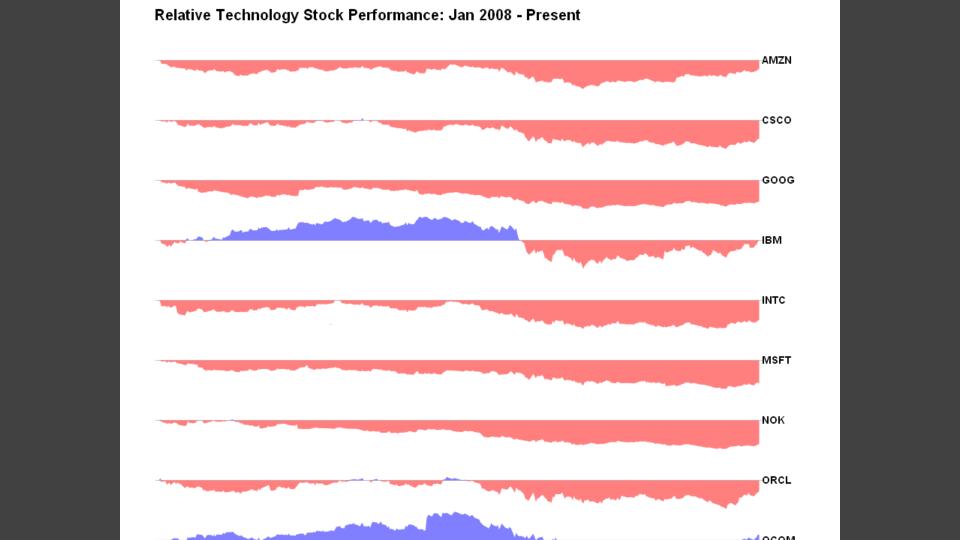

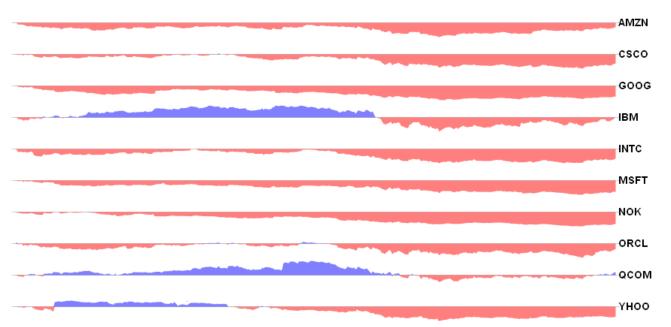

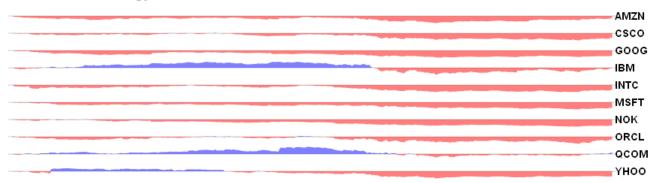

Relative Technology Stock Performance: Jan 2008 - Present

Horizon Graphs

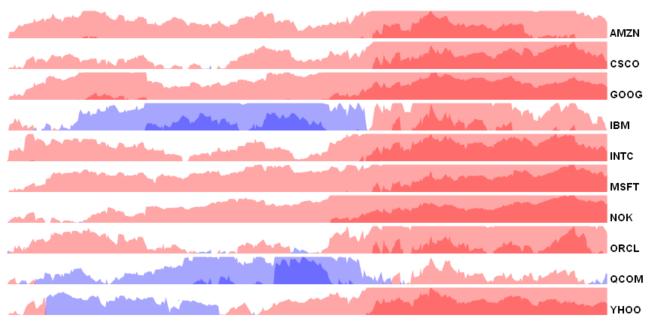

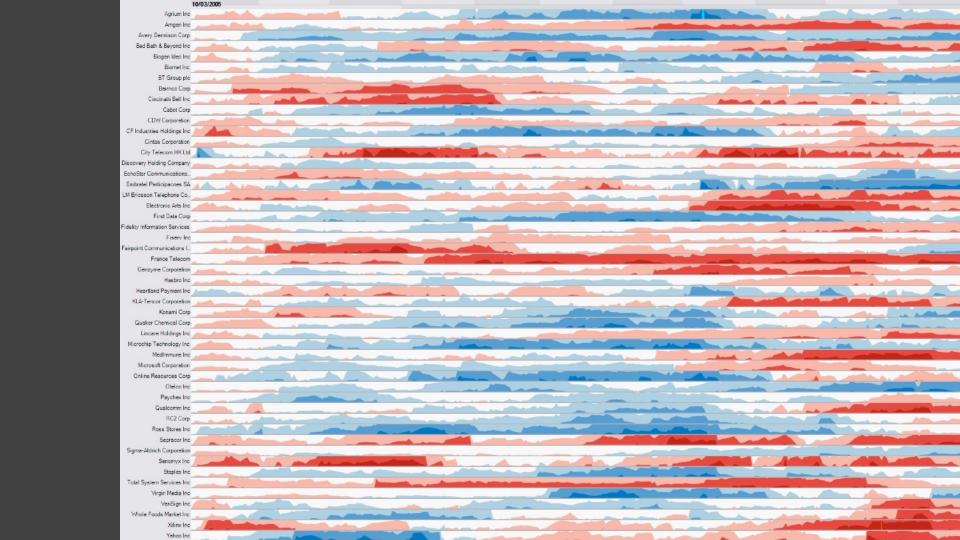

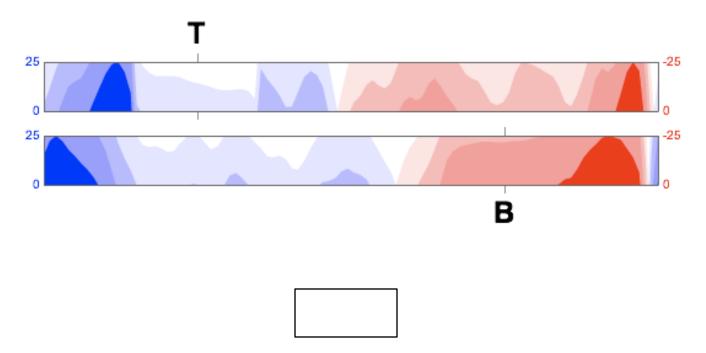

Experiment: Chart Type & Size

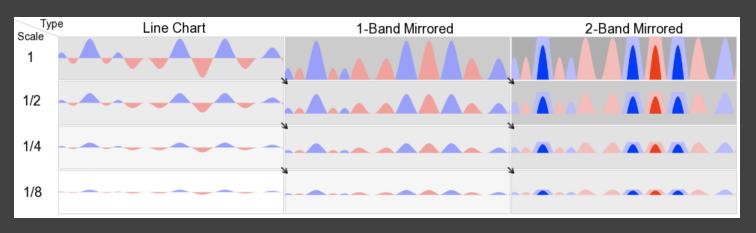

Q1: How do mirroring and layering affect estimation time and accuracy compared to line charts?

Q2: How does chart size affect estimation time and accuracy?

Estimate the difference between T and B (0-200) to within 5 values.

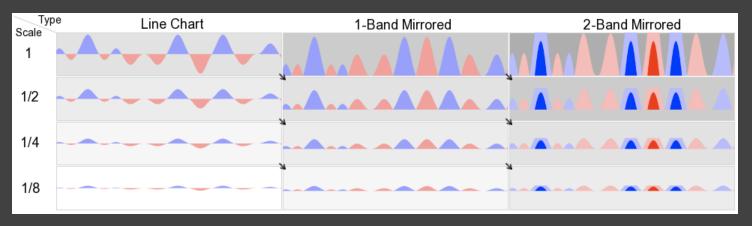

Experiment Design

3 (chart type) x 4 (size) within-subjects design

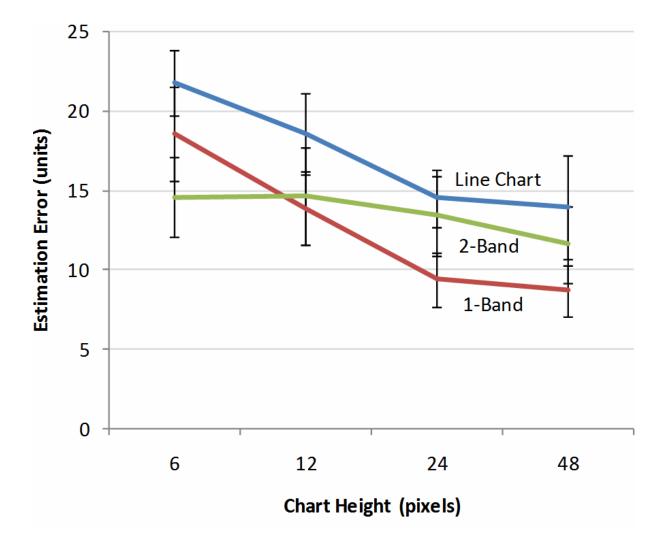

- \cdot N = 30 (17 male, 13 female), undergrads
- · 14.1 inch LCD display, 1024 x 768 resolution
- At scale = 1, chart is $13.9 \times 1.35 \text{ cm}$ (48 px)

Experiment Design

- 3 (type) x 4 (size) within-subjects design N = 30 (17 male, 13 female), undergrads
- 2 (type) x 3 (size:1/8, 1/12, 1/24) follow-up

N = 8 (6 male, 2 female), engineering grads

Virtual Resolution (VR)

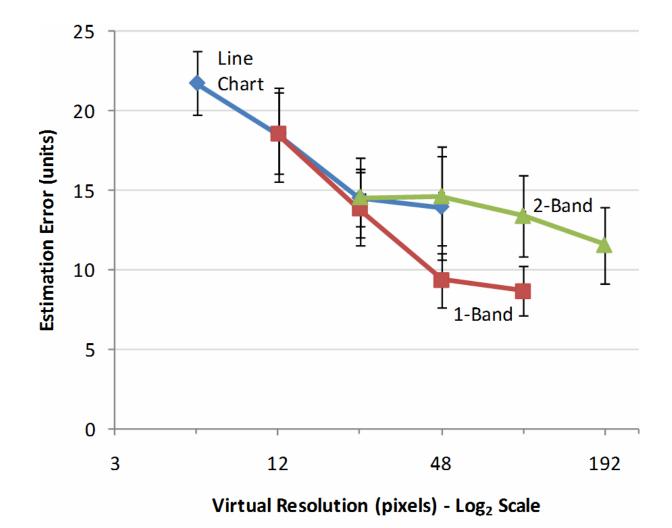

The un-mirrored, un-layered height of a chart

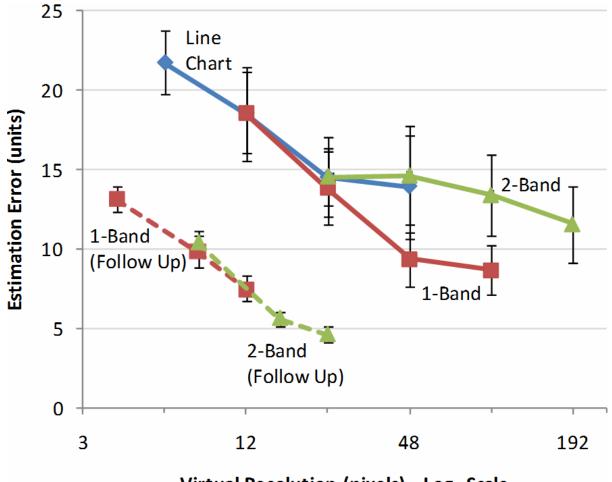

$$\mathbf{h}$$

$$VR = \mathbf{h}$$

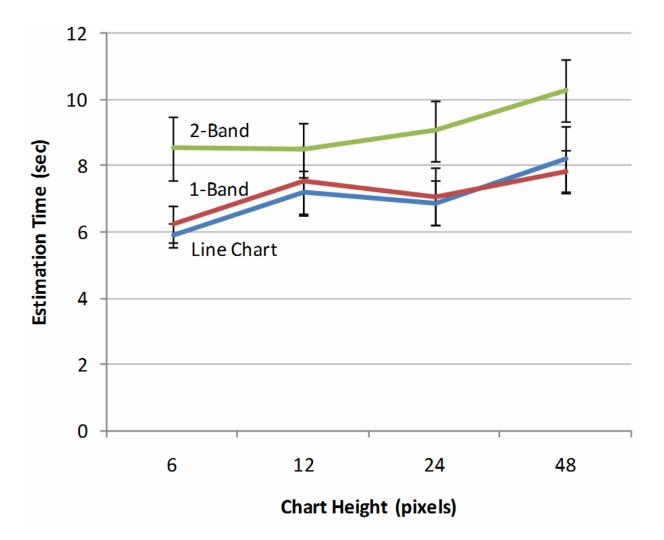

$$VR = 2\mathbf{h}' = \mathbf{h}$$

$$VR = 4\mathbf{h}'' = \mathbf{h}$$

Virtual Resolution (pixels) - Log₂ Scale

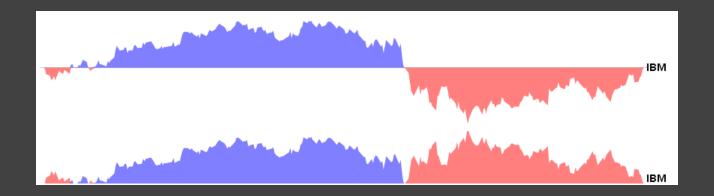

Experiment Results

- **Q1**: 2-band horizon graph (but not mirrored graph) has higher baseline estimation time and error.
- **Q2**: Estimation error increases as the *virtual resolution* decreases.
 - Estimation time decreases as the physical height decreases.

Design Guidelines

Mirroring does not hamper perception

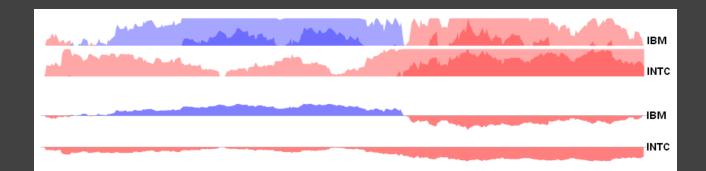

Design Guidelines

Mirroring does not hamper perception

Layered bands beneficial for smaller charts

- **2-band mirror charts** more accurate for heights under 6.8mm (24 pixels @ 1024x768)
- Predict benefits for 3 bands under 1.7mm (6 px)

Design Guidelines

Mirroring does not hamper perception Layered bands beneficial for smaller charts

Optimal chart sizing

- **Sweet spots** in time/error curves
- 6.8mm (24 px) for line chart & mirrored chart
- 3.4mm (12 px) for 2-band horizon graph

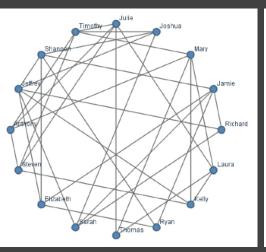

FOLLOW-UP QUESTION:

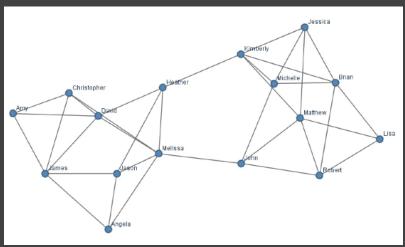

What other **tasks** and **performance measures** should one test?

of Node-Link Diagrams

Perceptual Organization

Perceptual Organization of Graphs

Circular

Force-Directed

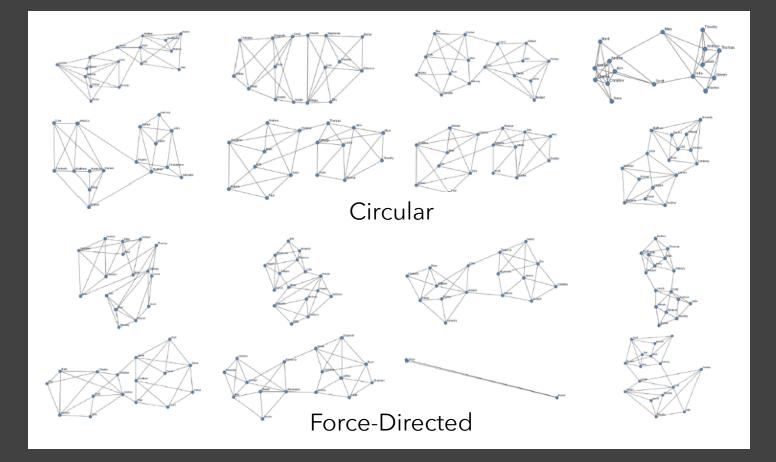

Experiment Design

Factors

Circular or Force-Directed Seed Layout # of Between-Cluster Edges ("masking") All graphs had two primary clusters

Measures

of Edge Crossings
Average Edge Length
Average Node Distance
within or between clusters

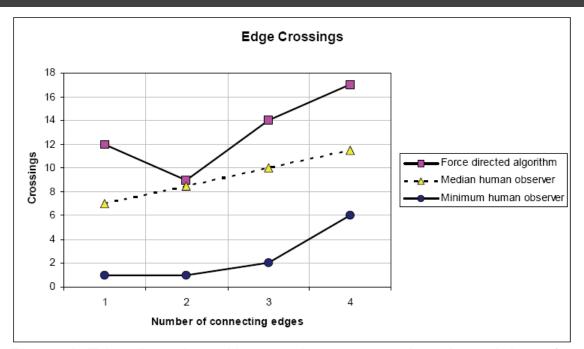

Figure 4. Edge Crossings. Human observers produced graph layouts with fewer edge crossings than the force-directed graph algorithm.

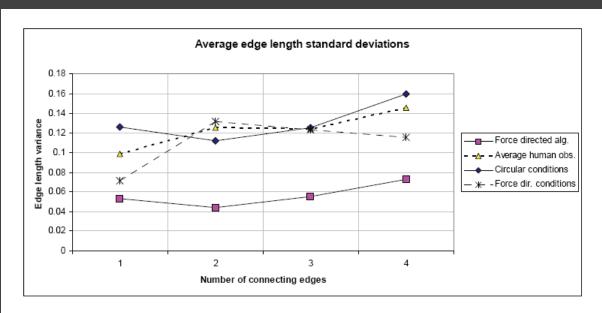

Figure 5. Edge Length Distribution. Human observers did not focus on maintaining equal edge length as much as the force directed algorithm.

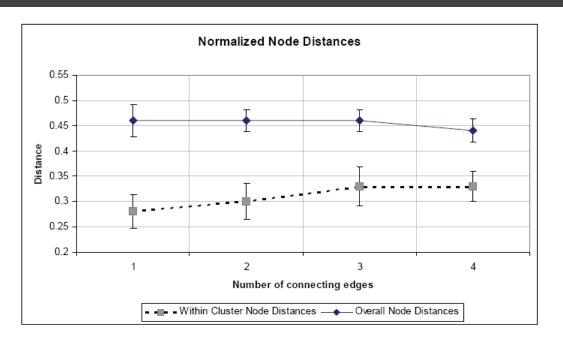

Figure 7. Cluster Extraction. For all levels of masking, the distance between nodes within a cluster is significantly smaller than the overall inter-node distance, demonstrating perceptual grouping. Error bars show 95% confidence intervals

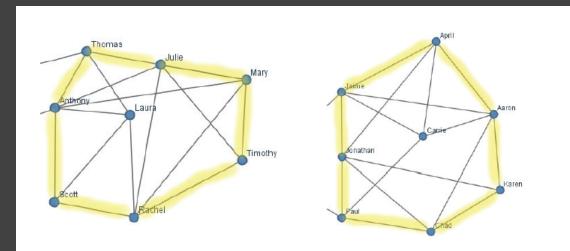

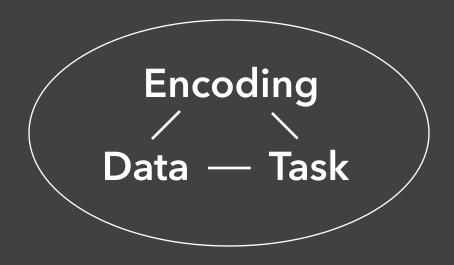

Figure 9. Cluster Hulls. Two examples of user-generated layouts where cluster edges formed a hull enclosing the cluster, organizing it into a single perceptual group.

Summary

Design and analyze visualization techniques in context of real-world use.

Time/error analyses can be insightful, but they don't provide a complete picture.

Performance measures may be more suited to serious analysis than casual use?

Users & Domain

Final Project Schedule

Proposal Fri Nov 7

Prototype Wed Nov 19

Demo Video Wed Dec 3

Video Showcase Thu Dec 4 (in class)

Deliverables Mon Dec 8

Logistics

Upload your video to YouTube (unlisted is fine)

Submit the video URL on Gradescope

Be sure to include all team members!

Demo Video Guidelines

Your video should communicate your chosen topic and goals along with your visualization designs.

Typically videos use a mixture of static slides and interactive screen capture with overlaid narration.

The initial frame of your video should include your project name and the team members' names.

You might show your page as-is, or you might take excerpts (cropped views) of your page for a better video narrative. Whatever communicates best.

Demo Video Guidelines, Cont.

Your video should communicate how your designs enable understanding of your chosen topic & data.

Do not laundry list the various features you implemented. Instead focus on what viewers can learn from your submission.

Walk us through an envisioned use case from the perspective of a viewer, demonstrating the kind of insights/explanations one might gain.

Keep it tight! 90 seconds goes quickly:)
