“Do not fuck with graphic designers” – Robert Palmer

Illegible Visualizations

People will get lost in the details or overwhelmed by complexity

...if we make things intentionally complex people then people may just assume we know what we're talking about or will be too dazed to check too closely.

Deceptive Visualizations

Incorrect Visualizations

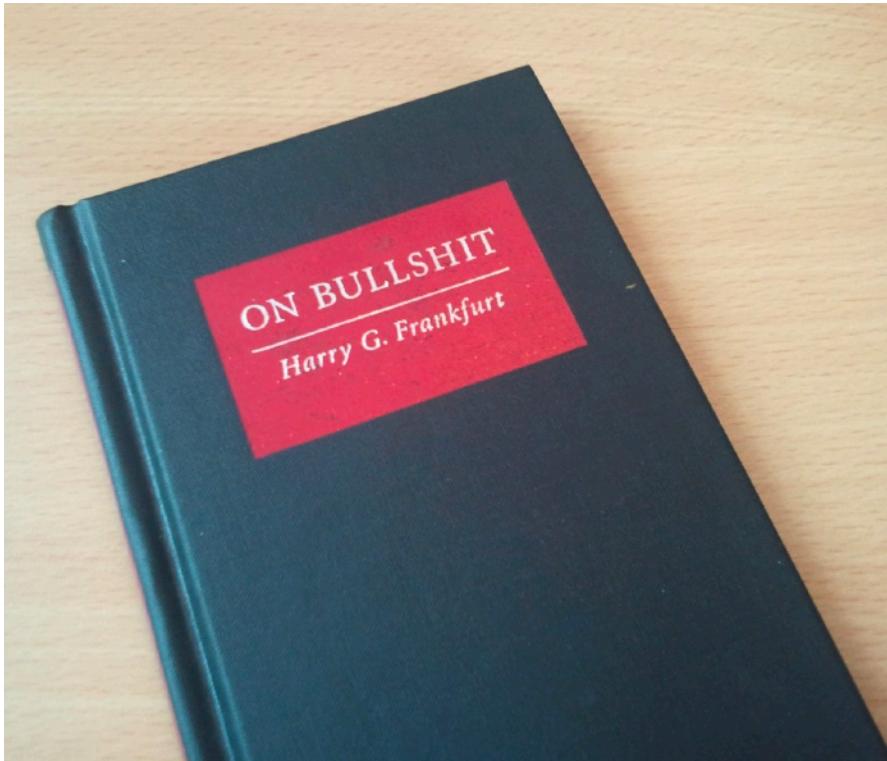

Illegible Visualizations

Bullshit Visualizations

Unconventional Visualizations

Bullshit Visualization

Lie:

"No, officer, I wasn't speeding"

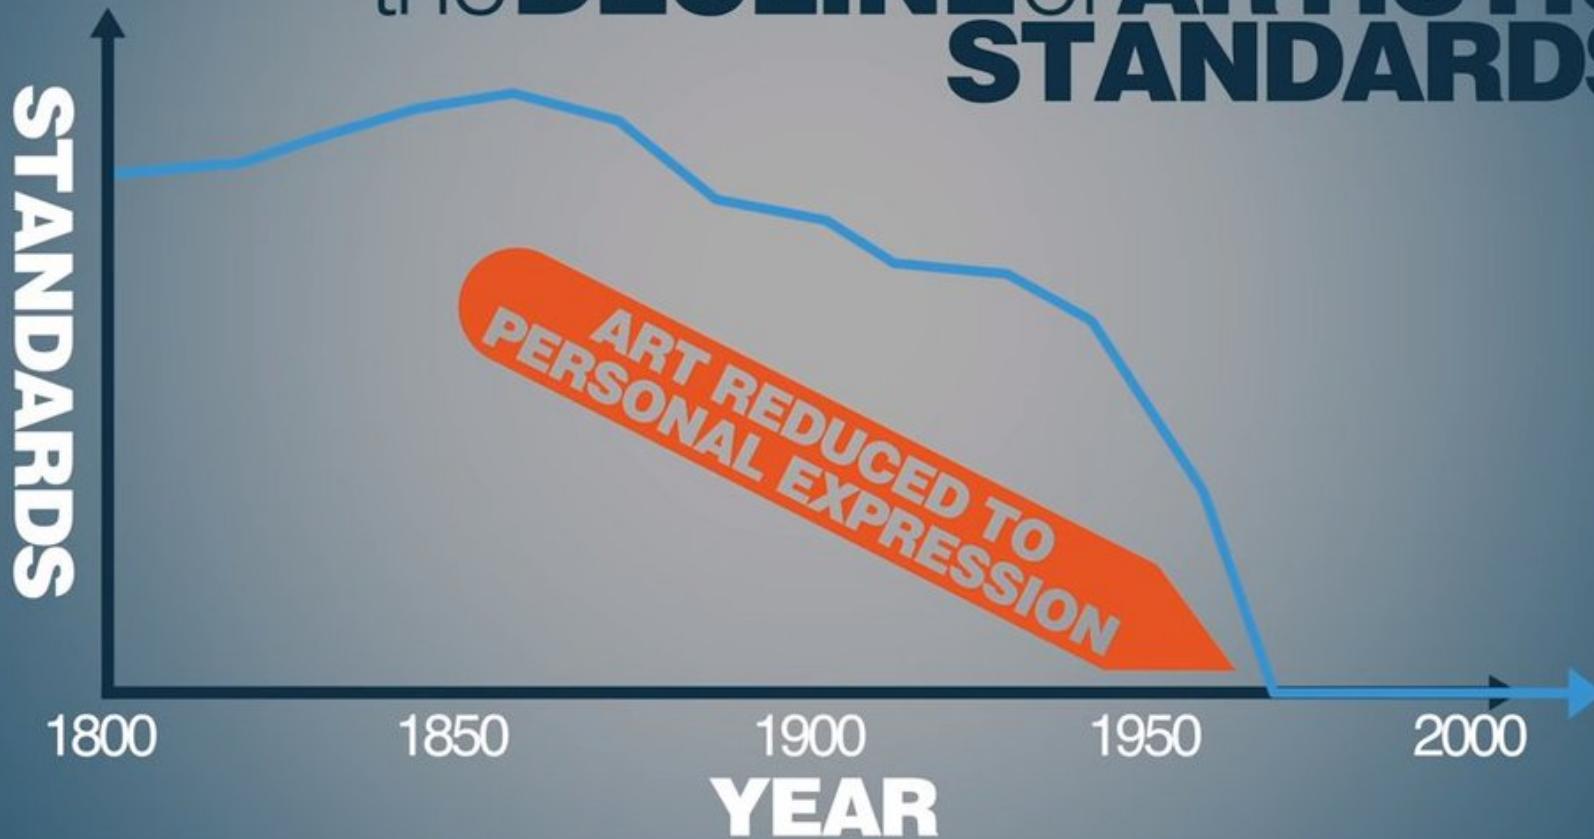

(you know the truth, but intentionally say something you know is untrue)

Bullshit:

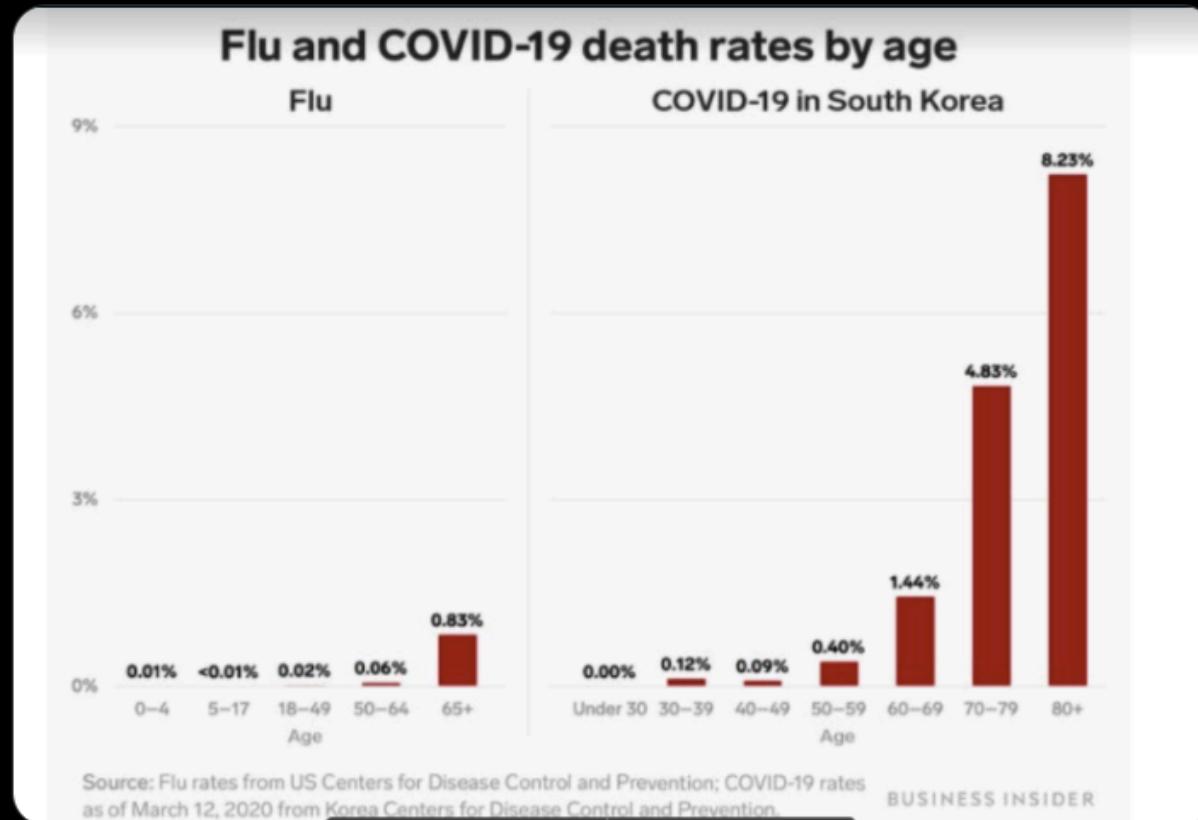

"The party was lame anyways, it's good I wasn't invited"

(you don't know or don't care about the truth, but intentionally say something you hope is persuasive)

the **DECLINE** of ARTISTIC STANDARDS

For people under 60, coronavirus is LESS dangerous than the seasonal flu:

Bullshit Visualizations

You can just make stuff up with no connection to reality

...show stuff that looks like data but isn't

...assume a conclusion and pretend it's true

...or give people data they can't do anything with

Deceptive Visualizations

Illegible Visualizations

Bullshit Visualizations

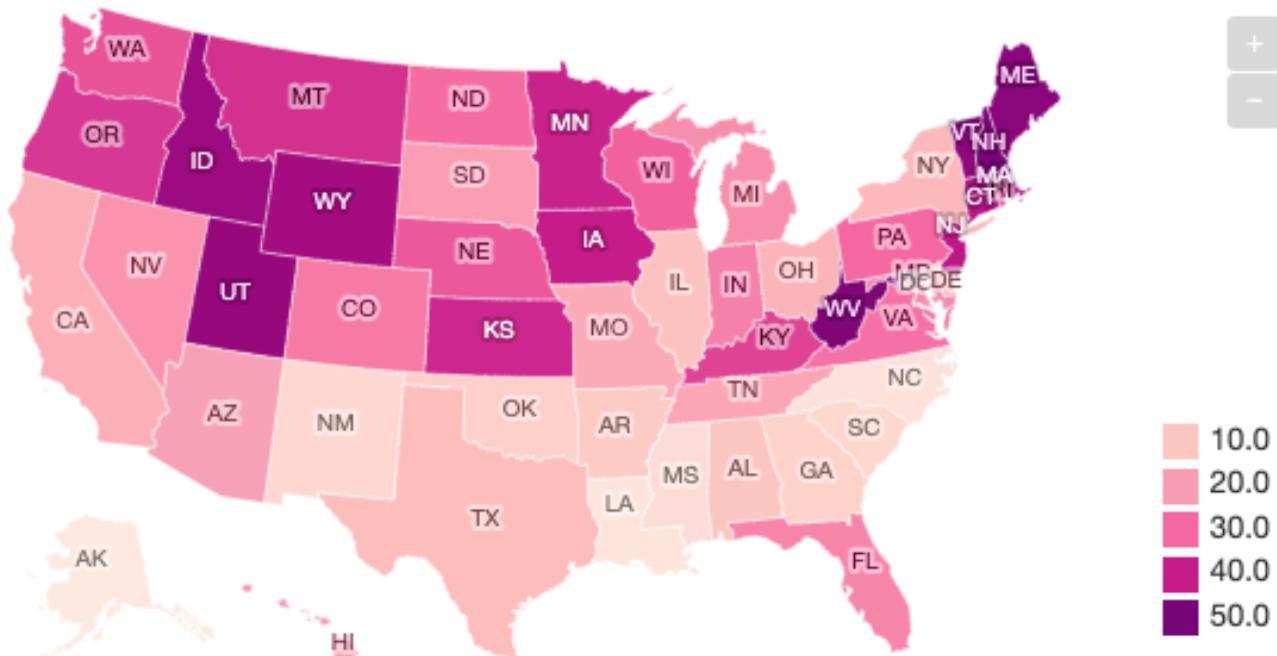

Unconventional Visualizations

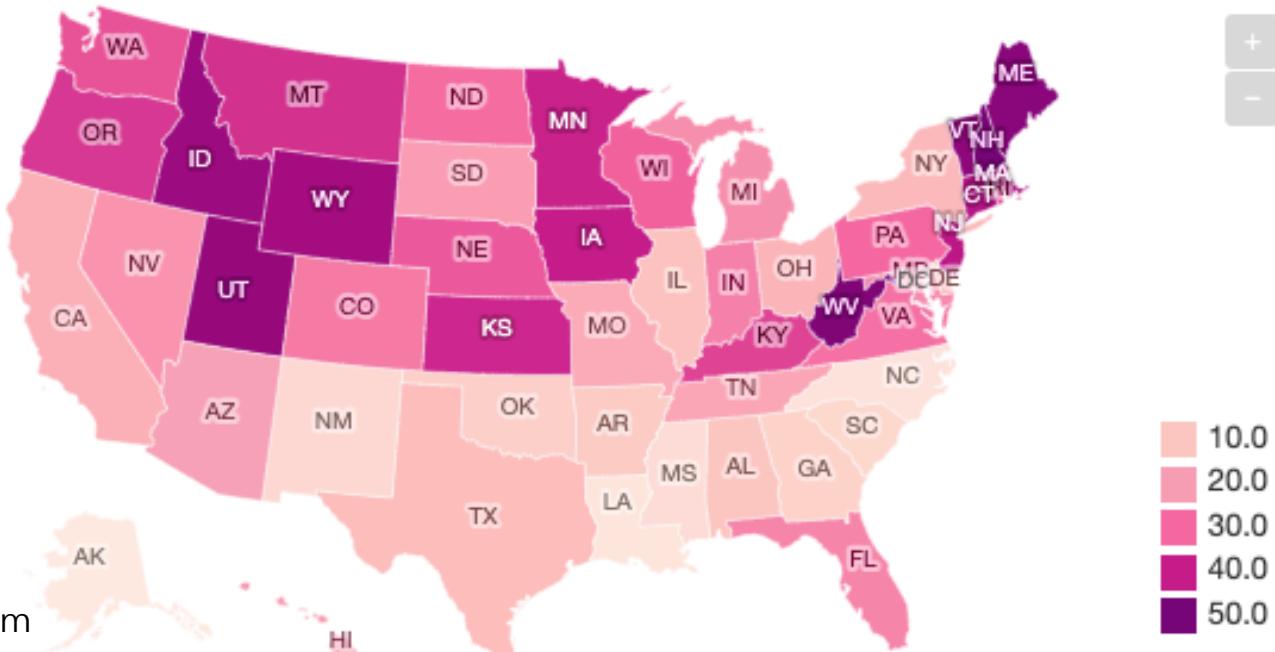

Which states have the most STIs?

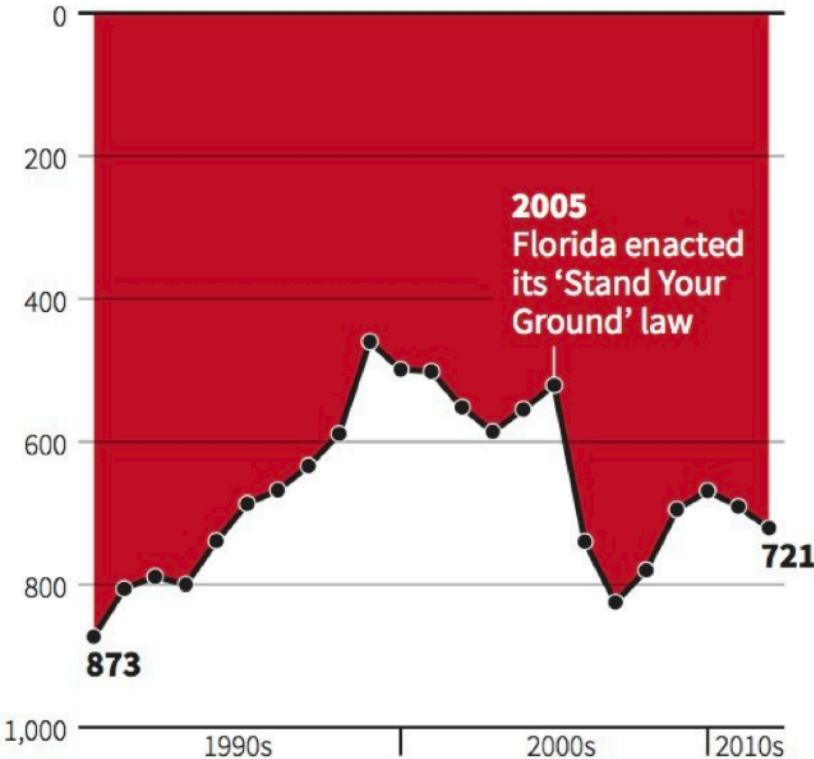

Which states have the most STIs?

"Each state has been rated from one to 50: the higher the score, the smaller the proportion of STIs. So on the map - the darker the color, the smaller the rate of STIs."

Average Annual Global Temperature in Fahrenheit 1880-2015

Unconventional Visualizations

People have tacit conventions on how they interpret charts (around colors, axes, slopes)

...if you violate those conventions, you can catch people off guard.

Deceptive Visualization Wrap-Up

Ways to mislead:

Breaking assumptions, expectations, conventions, drowning people in details... or just making stuff up.

Context matters:

Not every chart that breaks a design “rule” is misleading

Not every chart that follows the design “rules” is truthful

Exercise & Assignment

Deceptive Visualization

Design **two** static visualizations for a dataset:

1. An *earnest* visualization that faithfully conveys the data
2. A *deceptive* visualization that tries to mislead viewers

Your two visualizations may address different questions.

Try to design a deceptive visualization that appears to be earnest: *can you trick your classmates and course staff?*

You are free to choose your own dataset, but we have also provided some preselected datasets for you.

Submit two images and a brief write-up on Gradescope.

Due by **Tue 1/27 EOD**.

Deceptive Visualization Exercise

This week you will get more practice rapidly creating visualizations, and think through how these visualizations may (mis)communicate.

Given a dataset of demographics and earnings, create both earnest and deceptive charts.

Hone your deception skills in advance of the A2 assignment!

We're here to help! If you complete the exercise with time to spare, start the A2 assignment.
