### AIT Crawler

 $m{A}$ nthony Johnson  $m{I}$ gor Volynskiy  $m{T}$ ravis Rothlisberger

# Measurements

#### • First assignment crawl

- CPU time 15m 40s
- # pages visited 236
- # Links followed 273
- mp3s found 712
- Pages/mp3s 0.33
- CPU time per MP3 1.32 sec

#### • Guessing Accuracy

- Overall: about 60%
- Major Artists: about 80%

# Lessons learned

#### Teamwork

 Project divisions, importance of communicating the interaction between individuals' parts.

# Planning

- Concrete, well-thought out design. Foresight regarding potential issues and changes.
- Design code to be flexible for any additions, reductions or changes that may need to be made in the future.

#### End Product

- Thoroughly test the code. Just because it works for a couple hours, doesn't mean it won't hit any snags.
- Users prefer simple and easy to neat and complex.

# Next Time...

# • Better Crawling

- Learn from the past, track statistics on servers.
- Identify "hidden" MP3s, (.zip, .class, ...)
- Clean up afterwards. Remove dead/bad links.

#### • Better Planning

- More in-depth design of website and UI before developing database.
- More scalability. Allow the structure to expand more easily.

#### · Better Stuff

- Artist and file info, discographies, bios, ...
- User interaction. Help name files, report dead links, request and post files, "punch the monkey" banners....
