Label with your voice

Swipe through pictures, **listen** to your memories, and **show!**

“Having fun in the snow”

- ### Problems
1. Blind individuals enjoy taking pictures, but no accessible camera app exists for Android.
 2. It is difficult to identify and distinguish photos taken.
 3. Need more effective way of sharing pictures with other blind friends and family members.

- ### Solution
1. Accessible UI with voice feedback, instructions, and low-vision friendly colors.
 2. Tag pictures with voice and browse them with audio playback.
 3. Enhanced photo sharing experience with voice attached to photos.
