Introduction

- ❑ Vaccine cold chain reporting in Laos
- ❑ Stock levels and refrigeration performance
- ❑ SMS reporting system

Problem

Health facilities need to quickly train workers to send SMS messages for immunization reporting

HC 01 03 14

FT 1 8

SL PC 102 PE 81

Stock level
PCV vaccine: 102
Penta vaccine: 81

The diagram illustrates the SMS reporting process for health facilities. It shows a sequence of steps: 1. A facility with four workers (A, B, C, D) sends an SMS. 2. The SMS content is shown as 'ສົ່ງ SMS ຫາ FT A32B10 ໄປທີ່ເບີ 020 XXXXX'. 3. A tree diagram shows the message being received by A32 and B10, which then branches into individual workers (A, B, C, D) and their respective stock levels (3, 2, 1, 0). 4. A screenshot of a mobile phone shows an 'ALARM' message at 23:04 with a '5.8' signal strength and an 'OK' button. 5. A yellow box explains that the 'OK' button is used to confirm the stock level. 6. A second SMS step is shown with the content 'ສົ່ງ SMS ຫາ FT 0 ໄປທີ່ເບີ 020 XXXXXXX'. 7. A final yellow box states that the 'OK' button is used to confirm the stock level.

Solution

- ❑ Highly desired by UNICEF
- ❑ Android tablet video training application
 - ❑ Videos
 - ❑ Images
 - ❑ References
 - ❑ Quizzes

Solution

- ❑ Training key to project success
- ❑ Feedback from health workers:
 - ❑ *“Less training...more practice”*
