Email address: \_\_\_\_\_

Partner names for this activity: \_\_\_\_\_

Paperless electronic voting machines are designed to allow voters to vote without needing to use paper, which some argue is more cost effective and also easier and less error-prone than previous paper-based methods.

Q1: What potential security problems do you see with the electronic voting system described in class?

Q2: Who might try to attack this electronic voting system, and what might be their resources / capabilities / level of access?

Q3: What might be the attacker's goals?
