

CSE 484 In-section Worksheet #3

Q1. Which `gdb` command allows us to:

view the four words starting at `ebp` in hex? `x/4xw $ebp`

view the next five instructions at `eip`? `x/5i $eip`

view all instructions for function `foo`? `disas foo`

Q2. Which register does the x86 instruction `RET` affect? How, exactly?

“The `ret` instruction implements a subroutine return mechanism. This instruction first pops a code location off the hardware supported in-memory stack (see the `pop` instruction for details). It then performs an unconditional jump to the retrieved code location.”

<https://www.cs.virginia.edu/~evans/cs216/guides/x86.html>

Q3. What do `tmalloc()` and `tfree()` do?

See slides page 6

Q4. What's the issue with this code?

```
char *p; char *q;
if ( (p = tmalloc(128)) == NULL)
{ exit(EXIT_FAILURE); }
if ( (q = tmalloc(128)) == NULL)
{exit(EXIT_FAILURE); }
```

A

```
tfree(p);
tfree(q);
```

B

```
if ( (p = tmalloc(256)) == NULL)
{exit(EXIT_FAILURE); }
obsd_strlcpy(p, arg, 256);
```

C

```
tfree(q); Double free!
```

Q5. Based on `tmalloc.c`, draw what the heap/free list looks like at points, A, B, and C. Include chunk structure and label `p` (at or before point B), `p` (at point C), and `q`. Where is `buf` copied?

A:

```
      p                               q
-----
| l | r | data | l | r | data |
|___|___|_____|___|___|_____|
```

B: (think of the left and right divisions of `q` as implicit because of consolidation)

```
      p                               q
-----
| l | r | free : l : r :
|___|___|_____|___|___|_____|
```

C:

```
      p                               q
-----
| l | r | data (buf): l : r :
|___|___|_____|___|___|_____|
```

Q6. Given your diagrams and the following code for chunk consolidation (from `tmalloc.c`), what do the following statements do when executed in the call `tfree(q)` after point C?

```
q->s.r = p->s.r;  
p->s.r->s.l = q;
```

slides page 10:

if we control chunks `p` (and `q`), this code will write the value of `q` (address of buffer?) to a location we specify (location of saved EIP?).
