Paperless electronic voting machines are designed to allow voters to vote without needing to use paper, which some argue is more cost effective and also easier and less error-prone than previous paper-based methods.

Q1: What do you think are the **security goals** of the electronic voting system described in class and shown above? What **assets** must be protected?

Q2: Who are the **adversaries** who might try to attack this electronic voting system? What might be the **attacker's goals**? What potential **threats or vulnerabilities** do you see?
