Deciding a combination of theories

Satisfiability Modulo Theories (SMT)

Combining theories with Nelson-Oppen

Combination solver

Theory $T_1 \cup ... \cup T_n$ with signature $\Sigma_1 \cup ... \cup \Sigma_n$ and axioms $A_1 \cup ... \cup A_n$

Combining theories with Nelson-Oppen

 Σ_1 -theory T_1 with axioms A_1

Theory solver

 Σ_2 -theory T_2 with axioms A_2

Theory solver

We'll see how to combine two theories. Easy to generalize to n.

Combination solver

Theory $T_1 \cup T_2$ with signature $\Sigma_1 \cup \Sigma_2$ and axioms $A_1 \cup A_2$

Combining theories with Nelson-Oppen

 Σ_1 -theory T_1 with axioms A_1

Theory solver

 Σ_2 -theory T_2 with axioms A_2

Theory solver

We'll see how to combine two theories. Easy to generalize to n.

Combination solver

Theory $T_1 \cup T_2$ with signature $\Sigma_1 \cup \Sigma_2$ and axioms $A_1 \cup A_2$

The combination problem is undecidable for arbitrary (decidable) theories. It becomes decidable under Nelson-Oppen restrictions.

Nelson-Oppen restrictions

T_1 and T_2 can be combined when

- Both are decidable, quantifier-free conjunctive fragments
- Equality (=) is the only symbol in the intersection of their signatures: $\Sigma_1 \cap \Sigma_2 = \{ = \}$
- Both are stably infinite

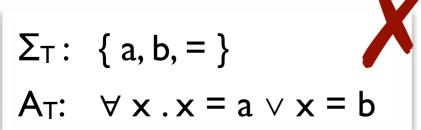

Nelson-Oppen restrictions

T_1 and T_2 can be combined when

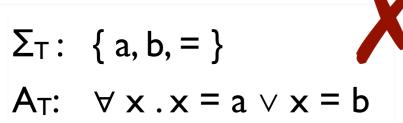

- Both are decidable, quantifier-free conjunctive fragments
- Equality (=) is the only symbol in the intersection of their signatures: $\Sigma_1 \cap \Sigma_2 = \{ = \}$
- Both are stably infinite

A theory T is stably infinite if for every satisfiable Σ_T -formula F, there is a T-model that satisfies F and that has a universe of infinite cardinality.

Shared and local constants

A constant is shared if it occurs in both F_1 and F_2 , and it is local otherwise.

Purification

 Σ_{R}

$$u_4 = x + u_1$$

$$u_5 \leq u_2 + u_3$$

$$u_1 = g(y)$$

$$u_2 = g(a)$$

$$u_3 = f(b)$$

$$u_5=f(u_4)$$

Shared and local constants

A constant is *shared* if it occurs in both F_1 and F_2 , and it is *local* otherwise.

Shared: {u1, u2, u3, u4, u5}

Local: $\{x, y, a, b\}$

$$\Sigma_{R}\,$$

$$u_4 = x + u_1$$

$$u_5 \leq u_2 + u_3$$

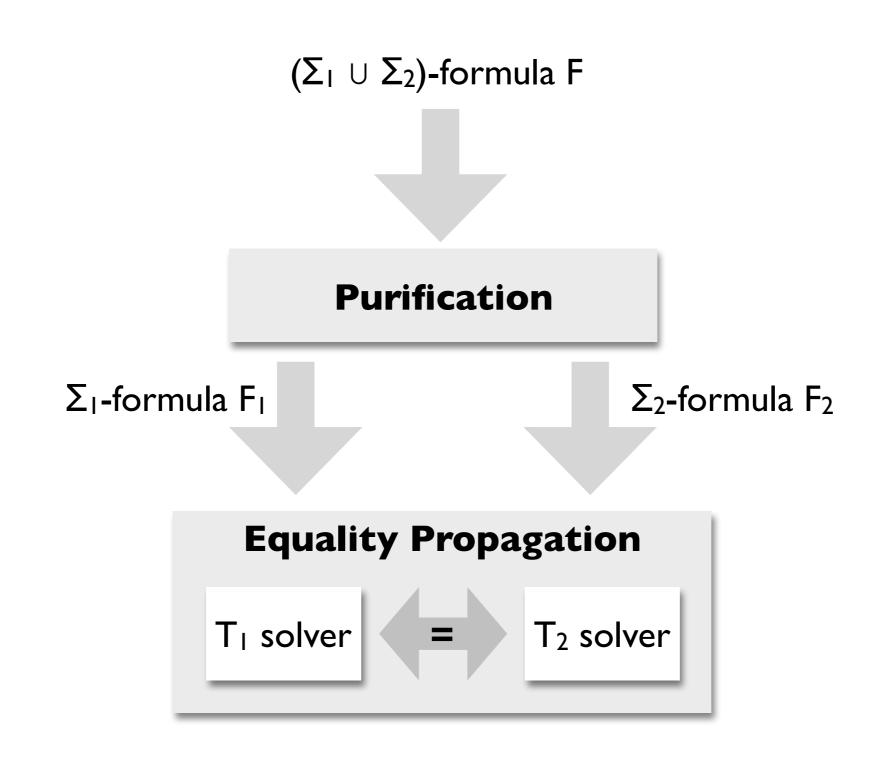

$$u_1 = g(y)$$

$$u_2 = g(a)$$

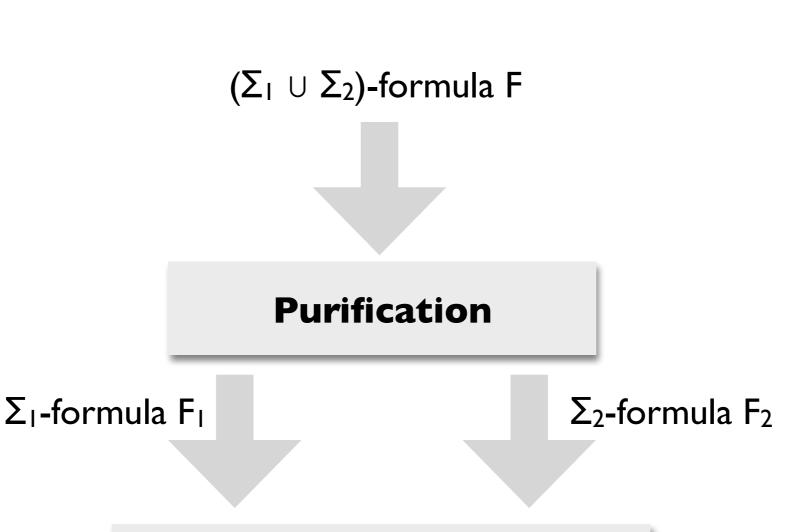

$$u_3 = f(b)$$

$$u_5 = f(u_4)$$

Overview of Nelson-Oppen

Overview of Nelson-Oppen

Equality Propagation

- Convex theories
- Non-convex theories

Convex theories

A theory T is *convex* if for every conjunctive formula F, the following holds:

If $F \Rightarrow x_1 = y_1 \lor ... \lor x_n = y_n$ for a finite n > 1, then $F \Rightarrow x_i = y_i$ for some $i \in \{1, ..., n\}$.

Convex theories

A theory T is *convex* if for every conjunctive formula F, the following holds:

If
$$F \Rightarrow x_1 = y_1 \lor ... \lor x_n = y_n$$
 for a finite $n > 1$,
then $F \Rightarrow x_i = y_i$ for some $i \in \{1, ..., n\}$.

If F implies a disjunction of equalities, then it also implies at least one of the equalities.

Examples of (non-)convex theories

Linear arithmetic over integers (T_Z)

Examples of (non-)convex theories

Linear arithmetic over integers (T_Z)

$$1 \le x \land x \le 2 \Rightarrow x = 1 \lor x = 2$$
 but
not $1 \le x \land x \le 2 \Rightarrow x = 1$
not $1 \le x \land x \le 2 \Rightarrow x = 2$

Examples of (non-)convex theories

Linear arithmetic over integers (T_z)

$$1 \le x \land x \le 2 \Rightarrow x = 1 \lor x = 2$$
 but
not $1 \le x \land x \le 2 \Rightarrow x = 1$
not $1 \le x \land x \le 2 \Rightarrow x = 2$

Equality and uninterpreted functions (T=)

Linear real arithmetic (T_R)

Soundness and completeness of Nelson-Oppen

If the theories T_1 and T_2 satisfy Nelson-Open restrictions, then the combination procedure returns UNSAT for a formula F in $T_1 \cup T_2$ iff F is unsatisfiable modulo $T_1 \cup T_2$.

Complexity of Nelson-Oppen

If decision procedures for convex theories T_1 and T_2 have polynomial time complexity, so does their Nelson-Oppen combination.

If decision procedures for non-convex theories T_1 and T_2 have NP time complexity, so does their Nelson-Oppen combination.

Summary

Today

- Sound and complete procedure for a combination of restricted theories
- Stably infinite, conjunctive, quantifier-free with signatures that are disjoint except for =

Next lecture

 Deciding satisfiability of arbitrary boolean combinations of quantifier-free first-order formulas
