I. Mapping Computer-supported Cooperative Work

Grudin (1994a, b) showing “development and research contexts” in the academic study of computer use in computer science. On the left side are the sub-fields or research streams in computer science. On the top are the types of user being served. On the bottom are the types of products being produced.

same time
synchronous

different time
asynchronous

same place
colocated

Face to face interactions
decision rooms, single display
groupware, shared table, wall
displays, roomware, ...

Continuous task
team rooms, large public display,
shift work groupware, project
management, ...

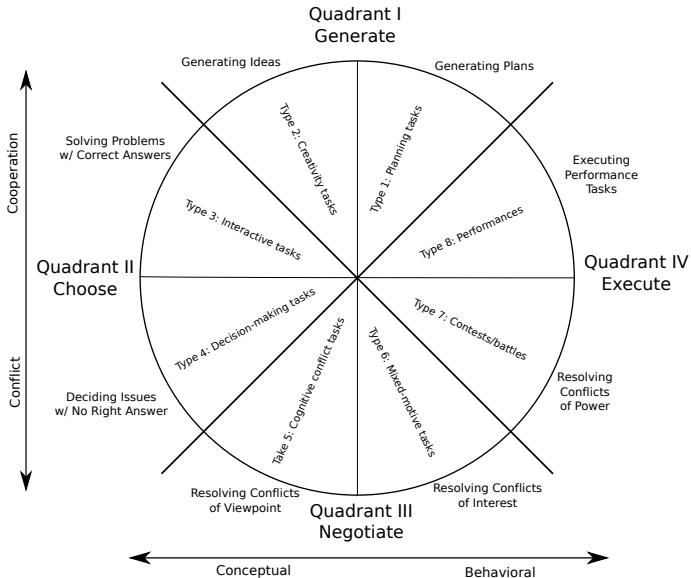

**Time/Space
Groupware Matrix**

different place
remote

Remote interactions
video conferencing, instance
messaging, chats/MUDs/virtual
worlds, shared screens, multi-user
editors, ...

Communication + coordination
email, bulletin boards, blogs,
asynchronous conferencing, group
calendars, workflow, version control,
wikis, ...

Typologies of Tasks

II. Classic Approaches to CSCW

Syllabus from MIT 16.499 (Circa 2005)

- ▶ Group Interaction Theory: Theories in Verbal Communication & Non-Verbal Communication
- ▶ Group Interaction Theory: **Distributed Cognition**
- ▶ Group Interaction Theory: **Activity Theory**
- ▶ Methodologies for Studying Groups & CSCW Technologies: Intro and Quantitative Approaches
- ▶ Methodologies for Studying Groups & CSCW Technologies: Qualitative Approaches
- ▶ Techniques for Modeling Group Interactions
- ▶ **Awareness** in Collaboration: Intro & Workspace **Awareness**
- ▶ **Awareness** in Collaboration: Team Situation **Awareness**
- ▶ Design Considerations for CSCW Technologies Computer Support for Co-located Collaboration Computer Support for Distributed Collaboration

Distributed Cognition

FIG. 8.1. Watchstander positions for sea and anchor detail.

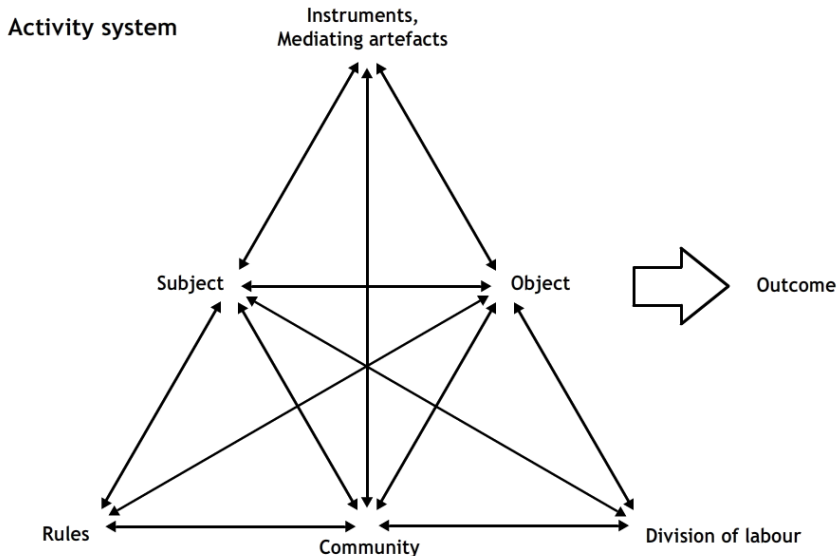

FIG. 8.2. View of a landmark with gyrocompass scale superimposed.

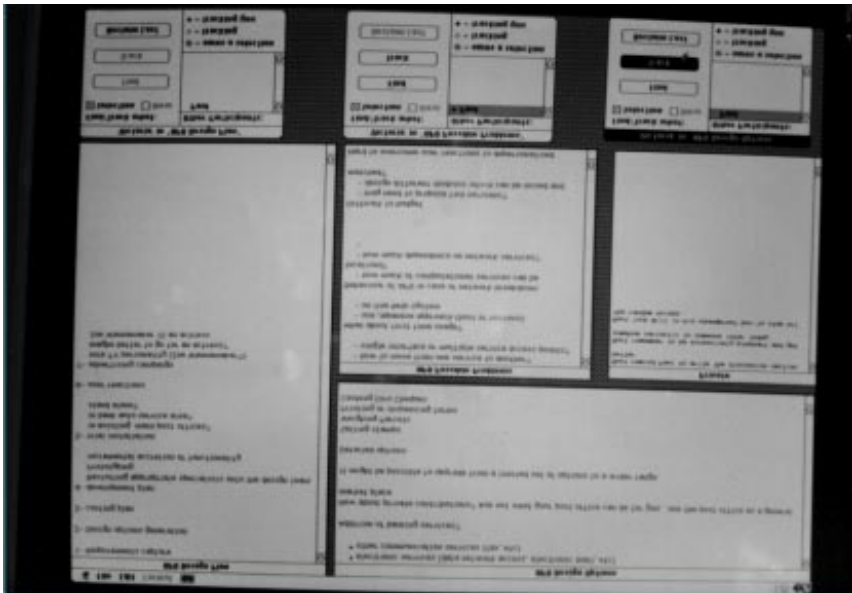

Activity Theory

[e.g., Nardi 1995: *Context and Consciousness: Activity Theory and Human-Computer Interaction*]

Awareness (Synchronous)

Awareness (Asynchronous)

Figure 1. Five Sample Scroll Bars

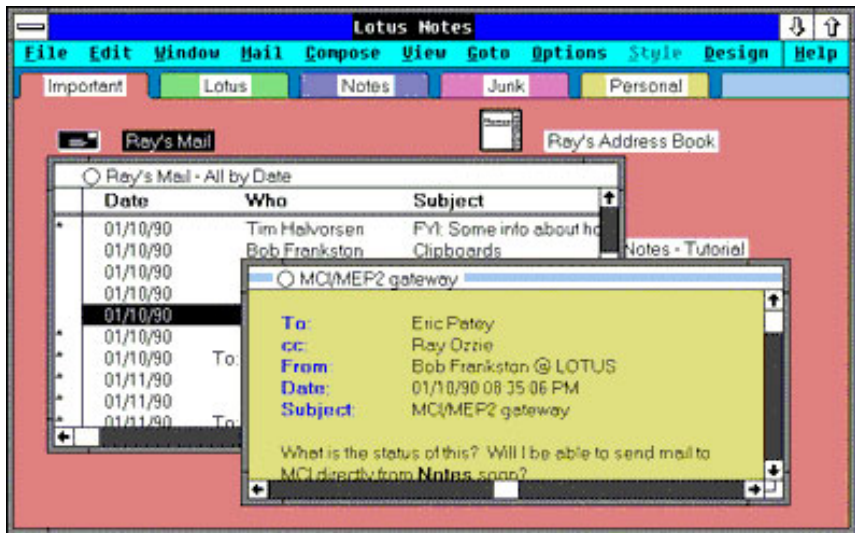

Figure 3. Mockup of Spread Sheet Wear

Coordination

A schematic illustration of the roles and information flows in software testing in the S4000 project. The flows in the diagram indicate the intended flow according to the bug handling protocol.

Organization and Social Structure

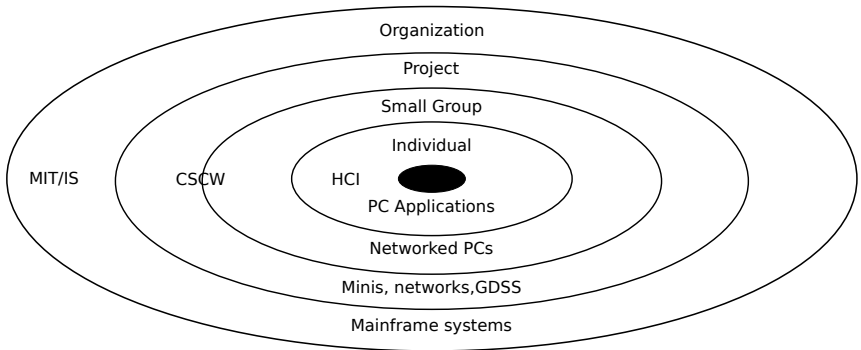

II. Social Computing and Peer Production

Peer Production

New modes of **collective production** made possible by lowered transaction costs through new communication technologies. (Benkler 2003, 2006)

Peer Production?

It's not particularly obvious where peer production would fit. It's certainly not obvious that it fit within traditional CSCW spaces.

Peer Production in CSCW

Figure 4. Joint influence of number and concentration of editors on changes in quality.

Figure 5. Joint influence of article age and concentration of editors on changes in quality.

Figure 6. Joint influence of initial quality and concentration of editors on changes in quality.

Figure 7. Joint influence of number of editors and communication on changes in quality.

IV. My Peer Production Research

Almost Wikipedia

A large, light gray globe is the central focus, composed of numerous interlocking puzzle pieces. The pieces feature various characters and symbols, including the Greek letter Omega (Ω), the Cyrillic letter И, the Japanese character 維, and the English letter W. The globe is positioned on the left side of the slide, with the title 'Almost Wikipedia' to its right.

		Innovativeness of Goal/Product	
		Familiar	Novel
Innovativeness of Process/Tools	Familiar	<p>Traditional products using traditional methods and tools.</p> <p><i>"Like Encyclopedia Britannica — just online and free."</i></p>	<p>New products using traditional methods and tools.</p> <p><i>"A new type of encyclopedia, but produced like the old ones."</i></p>
	Novel	<p>Traditional products using new methods and tools.</p> <p><i>"Like Encyclopedia Britannica, but produced in a radically new way."</i></p>	<p>New products using novel methods and tools.</p> <p><i>"A new type of encyclopedia produced in a radically new way."</i></p>

The Remixing Dilemma

Citation

Hill, Benjamin Mako, Andrés Monroy-Hernández. “The Remixing Dilemma: The Trade-off between generativity and originality.” Published in *American Behavioral Scientist*, 2013.

Remixing

The **reworking and recombination** of existing creative artifacts.
Most commonly in reference to music, video, and interactive media.

- ▶ **Widespread**, and an **important** new communication modality (e.g., Manovich 2005; Lessig 2009)
- ▶ Especially among use **youth** (Jenkins 2006; Palfrey and Gasser 2008)

- ▶ What qualities of Scratch projects and their creators are associated with more **generative** projects?
- ▶ What qualities are associated with more **original** remixing? (e.g., Keen 2007; Lanier 2010)

The image shows the Scratch programming environment. The top menu bar includes "SCRATCH", a globe icon, a save icon, a share icon, and the menu items "File", "Edit", "Share", and "Help". On the right side of the top bar are icons for user profile, help, and window management.

The left sidebar contains several category tabs: "Motion", "Looks", "Sound", "Pen", "Control", "Sensing", "Operators", and "Variables". The "Motion" category is currently selected.

The main workspace is divided into three sections:

- Scripts:** Contains a script for the sprite "Objeto1". The script starts with a "when space key pressed" event block, followed by a "repeat 10" loop. Inside the loop, there are two blocks: "move 10 steps" and "next costume".
- Stage:** Displays a beach scene with a blue sky, ocean, and sand. The cat sprite "Objeto1" is positioned on the sand. The coordinates at the bottom right of the stage are "x: -723 y: 248".
- Sprite Area:** Shows a "New sprite:" button with three options (star, star, question mark) and a small thumbnail of the cat sprite "Objeto1".

The script in the Scripts area is as follows:

```
when space key pressed
repeat 10
  move 10 steps
  next costume
```

(Resnick et al. 2009)

Projects are more likely to be remixed when they are:

- ▶ **Moderately complicated**
- ▶ Created by **prominent creators**
- ▶ **Cumulative**

But, there is a **tradeoff** in that each of these factors is also associated with **less original** forms of remixing behavior.

Promoting **complexity** seems like the best option.

Projects are more likely to be remixed when they are:

Laboratories of Oligrarchy

wiki[®]id

Citation

Shaw, Aaron, Benjamin Mako Hill. "Laboratories of Oligarchy? How The Iron Law Extends to Peer Production." *Journal of Communication* 64, no. 2 (April 2014): 215–38.

Peer Production as Participatory Democracy?

Peer production projects have been cited function as a **novel form of participatory organization...**

- ▶ ... with a broad **democratizing potential** inspiring waves of social movement activists and theorists. (e.g., Benkler, 2006; Castells, 1996; Fuster Morell, 2012; Hess and Ostrom, 2011; Wilson and Tufekci, 2012)
- ▶ ... and a model of **leaderless organization** e.g., (Shirkey 2008; Konieczny, 2009)

Robert Michels' "Iron Law"

“He who says organization says oligarchy.”

As organizations increase in size and complexity, they have a tendency to **develop oligarchy leadership** that **pursues conservative goals** consistent with organizational maintenance.

(Michels 1915; Lipset et al. 1956 Leach, 2005; Voss and Sherman, 2000)

Robert Michels' "Iron Law"

“He who says organization says oligarchy.”

As organizations increase in size and complexity, they have a tendency to **develop oligarchy leadership** that **pursues conservative goals** consistent with organizational maintenance.

- ▶ Consolidation of power among elites

(Michels 1915; Lipset et al. 1956 Leach, 2005; Voss and Sherman, 2000)

Robert Michels' "Iron Law"

“He who says organization says oligarchy.”

As organizations increase in size and complexity, they have a tendency to **develop oligarchy leadership** that **pursues conservative goals** consistent with organizational maintenance.

- ▶ Consolidation of power among elites
- ▶ Transformation of goals as elite interests diverge from members

(Michels 1915; Lipset et al. 1956 Leach, 2005; Voss and Sherman, 2000)
