

CSE 512 - Data Visualization

Interaction

Leilani Battle University of Washington

Learning Goals

What do we mean by “interaction”?

What role do interactions play in visualization?

What makes an interaction effective?

Exercise: What is an Interaction?

How would you define interactions in your own words?

[There is an] apparent challenge that computational artifacts pose to the longstanding distinction between the physical and the social, in the special sense of those things that one designs, builds, and uses, on the one hand, and those things with which one communicates, on the other.

“Interaction” – in a sense previously reserved for describing a uniquely interpersonal activity – seems appropriately to characterize what goes on between people and certain machines as well.

Lucy Suchman, *Plans and Situated Actions*

Interaction between people and machines requires *mutual intelligibility* or *shared understanding*.

    v1.y().fieldQ(...)  
  )
```

Gulf of Execution

Gulf

Conceptual model:
Draw a scatterplot

Real world

Gulf of Execution

The difference between the user's intentions and the allowable actions.

Gulf of Evaluation

The amount of effort that the person must exert to interpret the state of the system and to determine how well the expectations and intentions have been met.

Significance for Visualization

Good interactions:

- Enable users to answer their own questions about the data (execution)
- Generate results that are easy to interpret (evaluation)

Interactive Visualization

Interaction Techniques

Are there “essential” interactive operations for exploratory data visualization?

Exercise: What are Some Drawbacks to Textual Queries?

What are some potential downsides to assuming a text-based query interface for data analysis?

Issues with Textual Queries

1. For programmers
2. Rigid syntax
3. Only shows exact matches
4. Too few or too many hits
5. No hint on how to reformulate the query
6. Slow question-answer loop
7. Results returned as table

HomeFinder

The yellow dots above are homes in the DC area for sale. You may get more information on a home by selecting it. You may drag the 'A' and 'B' distance markers to your office or any other location you want to live near. Select distances, bedrooms, and cost ranges by dragging the corresponding slider boxes on the right. Select specific home types and services by pressing the labeled buttons on the right.

3D Dynamic Queries [Akers 04]

Pros & Cons

Pros

Controls useful for both novices and experts
Quick way to explore data

Pros & Cons

Pros

Controls useful for both novices and experts
Quick way to explore data

Cons

Simple queries
Lots of controls
Amount of data shown limited by screen space
Who would use these kinds of tools?

Summary

Most visualizations are interactive

Even passive media elicit interactions

Good visualizations are task dependent

Pick the right interaction technique

Consider the semantics of the data domain

Fundamental interaction techniques

Selection / Annotation, Sorting, Navigation,
Brushing & Linking, Dynamic Queries

Administrivia

A2: Deceptive Visualization

Design **two** static visualizations for a dataset:

1. An *earnest* visualization that faithfully conveys the data
2. A *deceptive* visualization that tries to mislead viewers

Your two visualizations may address different questions.

Try to design a deceptive visualization that appears to be earnest: *can you trick your classmates and course staff?*

You are free to choose your own dataset, but we have also provided some preselected datasets for you.

Submit two images and a brief write-up on Gradescope.

Due by **Fri 4/22 11:59pm.**

A2 Peer Reviews

On Thursday 4/21 you will be assigned two peer A2 submissions to review. For each:

- Try to determine which is earnest and which is deceptive
- Share a rationale for how you made this determination
- Share feedback using the "I Like / I Wish / What If" rubric

Assigned reviews will be posted on the A2 Peer Review page on Canvas, along with a link to a Google Form. You should submit two forms: one for each A2 peer review.

Due by **Fri 4/29 11:59pm.**

I Like... / I Wish... / What If?

I LIKE...

Praise for design ideas and/or well-executed implementation details. *Example: "I like the navigation through time via the slider; the patterns observed as one moves forward are compelling!"*

I WISH...

Constructive statements on how the design might be improved or further refined. *Example: "I wish moving the slider caused the visualization to update immediately, rather than the current lag."*

WHAT IF?

Suggest alternative design directions, or even wacky half-baked ideas. *Example: "What if we got rid of the slider and enabled direct manipulation navigation by dragging data points directly?"*

  ).params(brush),
  markBar().encode(
    x().fieldQ(repeat('row')).bin(true),
    y().count()
  ).transform(filter(brush))
).repeat({
  row: ['delay', 'distance', 'hour']
})
.data('data/flights.json')
```

Multi-view interactive graphics in ~10 lines of code

What constitutes a selection?

Input handlers: click, shift-click, drag, zoom, ...

Bindings

- **Inputs:** interactive brush, query widgets
- **Axis scales:** pan / zoom a scale domain
- **Legends:** interactive selection

Scale inversion: visual space → data space

Predicate: test if a data record is selected

A selection can then *parameterize* data transformations and visual encodings.

Selections

Selections *invert* scales and *parameterize* graphics

Origin
● Europe
● Japan
● USA

Bind selection to scale domains:
Synchronized Pan & Zoom!
