Approaches

- Align sequences, then look for common structure
 - Predict structures, then try to align them
 - Do both together

12/8/05

Searching for noncoding RNAs

- CM's are great, but where do they come from?
 - A comparative genomic approach
 - Search for motifs with common secondary structure in a set of functionally related sequences.
 - Challenges
 - Three related tasks
 - Locate the motif regions.
 - Align the motif instances.
 - Predict the consensus secondary structure.
 - Motif Search space is huge!
 - Motif location space, alignment space, structure space.

12/8/05

Pitfall for sequence alignment approach

- Structural conservation \neq Sequence conservation
 - Alignment without structure information is unreliable

12/8/05

Approaches

- Align sequences, then look for common structure
- Predict structures, then try to align them
 - single-seq struct prediction only ~ 60% accurate; exacerbated by flanking seq; no biologically-validated model for structural alignment
- Do both together
 - Sankoff – good but slow
 - Heuristic

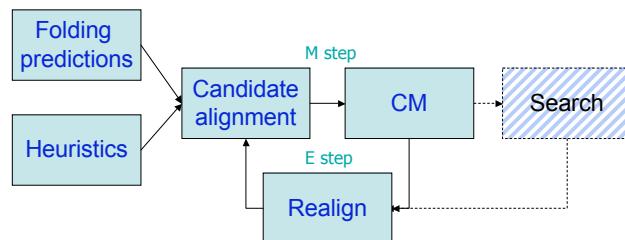

12/8/05

Design goal

- Search for RNA motifs in unaligned Sequences.
- Perform Local alignment
 - Exploit but do not require sequence conservation
 - Robust to inclusion of unrelated sequences.
 - Reasonably fast and scalable.
 - Produce a probabilistic model of the motif that can be directly used for homolog search.

CMfinder Outline

12/8/05

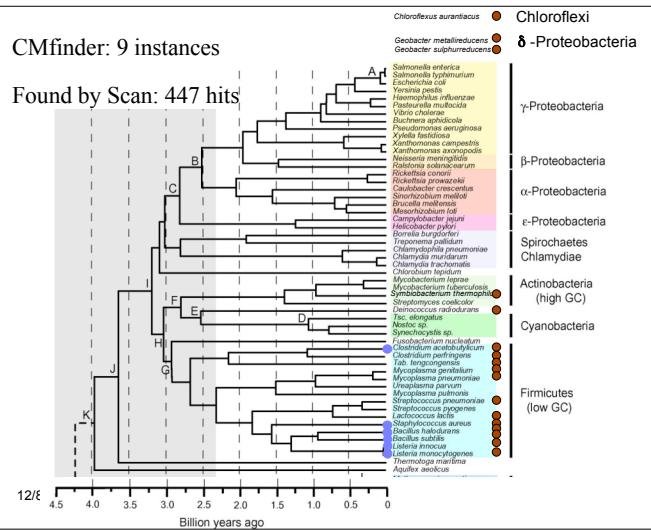

CMfinder at work

12/8/05

- CMfinder: 9 instances

- Found by Scan: 447 hits

Preliminary results of genome scan

Top 115 datasets (some are redundant)

13 T box, 22 riboswitches, 30 ribosomal genes

RNase P, tRNA, CIRCE elements and other DNA binding sites

Gene	#motif	#hits	RFAM_fam	#Rfam_seed	#Rfam_full	#TP	specificity	sensitivity
metK	13	150	S_box	71	151	145	0.967	0.960
ribB	9	106	RFN	48	114	97	0.915	0.851
folC	9	447	T_box	67	342	299	0.669	0.874
xpt	14	106	Purine	37	100	97	0.915	0.970
glmS	16	33	glmS	14	37	33	1.000	0.892
thiA	16	305	THI	237	366	305	1.000	0.833
ykoY	10	34	yybP-ykoY	74	127	33	0.971	0.260

Genome Scans in Progress

- Firmicutes
 - e.g. anthrax
- Actinobacteria
 - source of penicillin & most other antibiotics
- Cyanobacteria
 - Primary producer of oxygen
- Gamma-proteobacteria
 - e.g. E. coli
