

# CSE-571 Probabilistic Robotics

## Particle filters for tracking

## Ball Tracking in RoboCup

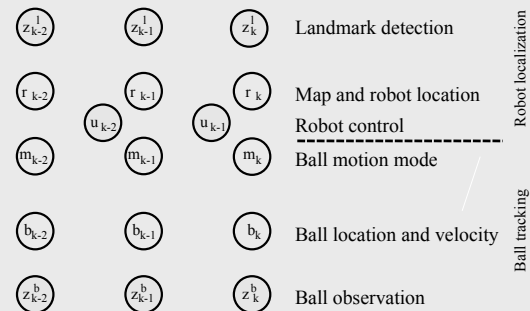

- Extremely noisy (nonlinear) motion of observer
- Inaccurate sensing, limited processing power
- Interactions between target and

Goal: Unified framework for modeling the ball and its interactions.

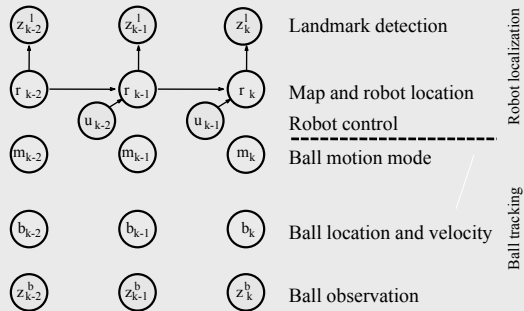

## Tracking Techniques

- Kalman Filter
  - Highly efficient, robust (even for nonlinear)
  - Uni-modal, limited handling of nonlinearities
- Particle Filter
  - Less efficient, highly robust
  - Multi-modal, nonlinear, non-Gaussian
- Rao-Blackwellised Particle Filter, MHT
  - Combines PF with KF
  - Multi-modal, highly efficient

## Inference: Posterior Estimation

Dieter Fox

$$p(b_k, m_k, r_k | z^b, z^l, u^{k-1})$$

CSE-571: Probabilistic Robotics

12

## Particle Filter for Robot Localization

Dieter Fox

CSE-571: Probabilistic Robotics

13

## Rao-Blackwellised PF for Inference

- Represent posterior by random samples
- Each sample

$$s_i = \langle r_i, m_i, b_i \rangle = \langle \langle x, y, \theta \rangle_i, m_i, \langle \mu, \Sigma \rangle_i \rangle$$

contains robot location, ball mode, ball Kalman filter

- Generate individual components of a particle stepwise using the factorization

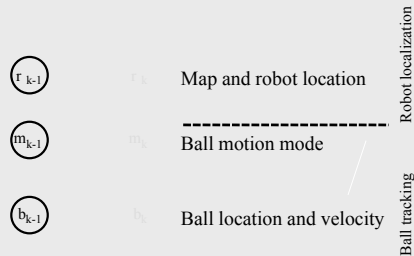

$$p(b_k, m_{1:k}, r_{1:k} | z_{1:k}, u_{1:k-}) = p(b_k | m_{1:k}, r_{1:k}, z_{1:k}, u_{1:k-}) p(m_{1:k} | r_{1:k}, z_{1:k}, u_{1:k-}) p(r_{1:k} | z_{1:k}, u_{1:k-})$$

Dieter Fox

CSE-571: Probabilistic Robotics

14

## Rao-Blackwellised Particle Filter for Inference

- Draw a sample from the previous sample set:

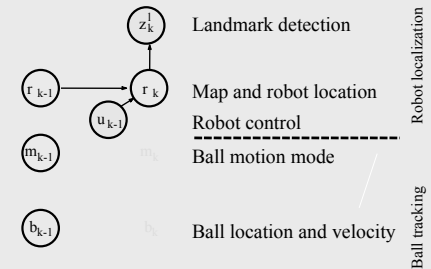

$$\langle r_k^{(i)}, m_k^{(i)}, b_k^{(i)} \rangle$$

Dieter Fox

CSE-571: Probabilistic Robotics

15

## Generate Robot Location

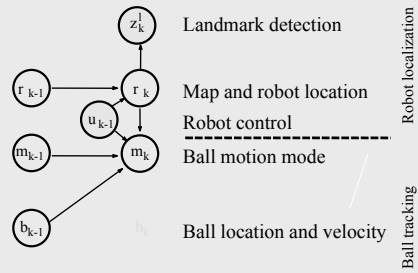

$$r_k^{(i)} \sim p(r_k | r_{k-1}^{(i)}, m_{k-1}^{(i)}, b_{k-1}^{(i)}, z_k, u_{k-1}) \Rightarrow \langle r_k^{(i)}, \dots \rangle$$

Dieter Fox

CSE-571: Probabilistic Robotics

16

## Generate Ball Motion Model

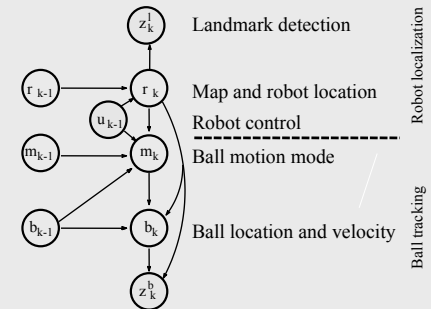

$$m_k^{(i)} \sim p(m_k | r_k^{(i)}, m_{k-1}^{(i)}, b_{k-1}^{(i)}, z_k, u_{k-1}) \Rightarrow \langle r_k^{(i)}, m_k^{(i)}, - \rangle$$

Dieter Fox

CSE-571: Probabilistic Robotics

17

## Update Ball Location and Velocity

$$b_k^{(i)} \sim p(b_k | r_k^{(i)}, m_k^{(i)}, b_{k-1}^{(i)}, z_k) \Rightarrow \langle r_k^{(i)}, m_k^{(i)}, b_k^{(i)} \rangle$$

Dieter Fox

CSE-571: Probabilistic Robotics

18

## Importance Resampling

- Weight sample by

$$w_k^{(i)} \propto p(z_k^l | r_k^{(i)})$$

if observation is landmark detection and by

$$w_k^{(i)} \propto p(z_k^b | m_k^{(i)}, r_k^{(i)}, b_{k-1}^{(i)}) = \int p(z_k^b | m_k^{(i)}, r_k^{(i)}, b_k^{(i)}) p(b_k^{(i)} | m_k^{(i)}, r_k^{(i)}, b_{k-1}^{(i)}) db_k$$

if observation is ball detection.

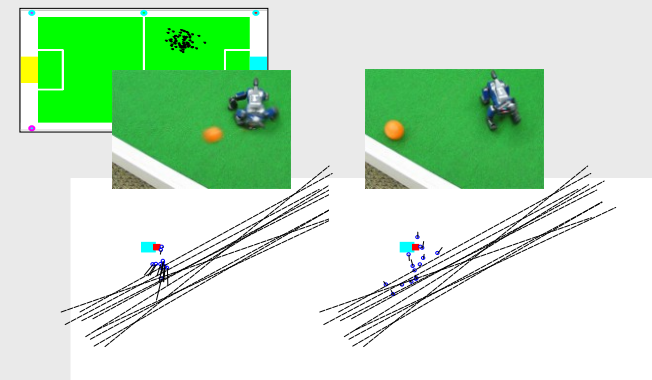

- Resample

21

## Tracking and Finding the Ball

- Cluster ball samples by discretizing pan / tilt angles
- Uses negative information

Dieter Fox

CSE-571: Probabilistic Robotics

22

## Experiment: Real Robot

- Robot kicks ball 100 times, tries to find it afterwards
- Finds ball in 1.5 seconds on average

[Liao-Fox-Kautz: AAAI-04, AIJ-07]

# Task

- Given data stream from a wearable GPS unit
  - Infer the user's location and mode of transportation (foot, car, bus, bike, ...)
  - Predict where user will go
  - Detect novel behavior / user errors

Dieter Fox

CSE-571: Probabilistic Robotics

30

# GPS-Tracking Is NOT Trivial

- Dead and semi-dead zones near buildings, trees, etc.
- Sparse measurements inside vehicles, especially bus
- Multi-path propagation
- Inaccurate street map
- ...

Dieter Fox

CSE-571: Probabilistic Robotics

31

# Graph-based Location Estimation

- Map is directed graph
- Location:
  - Edge  $e$
  - Distance  $d$  from start of edge
- Prediction:
  - Move along edges according to velocity model
- Correction:
  - Update estimate based on GPS reading

Dieter Fox

CSE-571: Probabilistic Robotics

32

## Kalman Filtering on a Graph: Prediction Step

Problem: Predicted location is multi-modal

## Kalman Filtering on a Graph: Correction Step

Problem: GPS reading is not on the graph

## Kalman Filtering on a Graph: Correction Step

- Probabilistically "snap" GPS reading to the graph
- Perform A\* search to compute innovation

## Kalman Filtering on a Graph: Correction Step

- Probabilistically "snap" GPS reading to the graph
- Perform A\* search to compute innovation

## Location Tracking: Inference

- Rao-Blackwellised particle filter represents posterior by sets of weighted particles:

$$S_k = \{ \langle s^{(i)}, w^{(i)} \rangle, i = 1, \dots, n \}$$

- Each particle contains Kalman filter for location:

$$s^{(i)} = \left\langle \underbrace{e^{(i)}, v^{(i)}, \theta^{(i)}}_{\text{Edge transitions, velocities, edge associations}}, \underbrace{N^{(i)}(\mu, \sigma)}_{\text{Gaussian for position}} \right\rangle$$

Edge transitions,  
velocities, edge  
associations

Gaussian for position

## Tracking Example

- GPS measurements
- Particles (Kalman filters)

## Infer Mode of Transportation

- Encode prior knowledge into the model
  - Modes have different velocity distributions
  - Buses run on bus routes
  - Get on/off the bus near bus stops
  - Switch to car near car location

## Dynamic Bayesian Network

Particles:  $s^{(i)} = \langle \dots, v^{(i)}, \theta, \dots, \mu, \sigma, \dots \rangle$

## Infer Location and Transportation

- Measurements
- Projections
- Green Bus mode
- Red Car mode
- Blue Foot mode

Dieter Fox

CSE-571: Probabilistic Robotics

41

## Transportation Routines

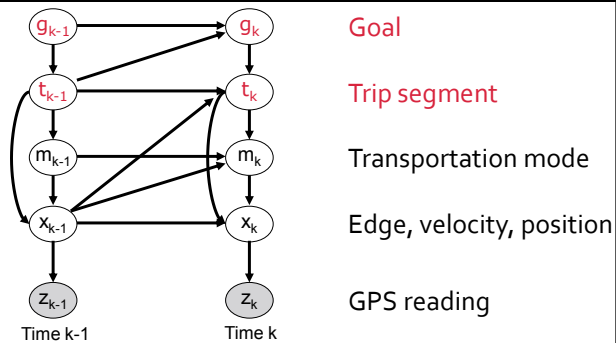

- Goal (destination):
  - workplace (home, friends, restaurant, ...)
- Trip segments: <start, end, transportation>
  - Home to Bus stop A on Foot
  - Bus stop A to Bus stop B on Bus
  - Bus stop B to workplace on Foot

Dieter Fox

CSE-571: Probabilistic Robotics

42

## Hierarchical Model

Particles:  $s^{(i)} = \langle \text{state variables} \rangle, m^{(i)}, e^{(i)}, v^{(i)}, \theta, \dots, \mu, \sigma, \dots$

Dieter Fox

CSE-571: Probabilistic Robotics

43

## Model Learning

- Key to goal / path prediction and error detection
- Customized model for each user
- Unsupervised model learning
  - Learn variable domains (goals, trip segments)
  - Learn transition parameters (goals, trips, edges)
- Training data
  - 30 days GPS readings of one user, logged every second (when outdoors)

Dieter Fox

CSE-571: Probabilistic Robotics

49

## Application: Opportunity Knocks

Dieter Fox

CSE-571: Probabilistic Robotics

50

## Discussion

- Particle filters are intuitive and simple
  - Support point-wise thinking (reduced uncertainty)
  - It's an art to make them work
  - Good for test implementation if system behavior is not well known
- Inefficient compared to Kalman filter
- Rao-Blackwellization
  - Only sample discrete / highly non-linear parts of state space
  - Solve remaining part analytically (KF, discrete)
