

CSE P 501 – Compilers

Final Class

Hal Perkins

Autumn 2021

Plan for today

- Project & other logistics
- Four mini-lectures
 - A little bit on simple register allocation (left this off last week but had some questions about it)
 - Inlining
 - Dynamic languages
 - Threads and memory models
 - Garbage Collection

Exam

- It was a little long, but not too much
- Expect to post results sometime in the next day or two
- Sample solution posted when grades are published
- If you have questions or if it looks like we may have goofed on grading, please send in a regrade request
 - Please compare to sample solution first

Projects

- Project due *Monday* 11 pm, *not later*
 - Double-check MiniJava language writeup and project assignment details when you think you're done
- Reports due *Tuesday* 11 pm
 - Push pdf to repo with correct filename
 - Please only a few pages, be sure to include group ID
 - Details on the web
- How's it going? Questions?

Project evaluation

- Ultimately what matters is where you wind up
 - We'll compute a final score on the whole thing
 - Intermediate scores and report will get weighed in as part of the final course grade, of course
 - Report helps us calibrate how it went and evaluate final result, but will not receive separate grade

Course Evaluations

- Online forms – you should have gotten the link via email
- Please fill in this week before they close Sunday
- Particularly useful feedback besides numbers:
 - Pacing/scheduling of lectures vs. projects?
 - Anything else that would help us do better next time?

Finis

- And that's it!
- Exam scores / solution our shortly
- Project grades/feedback late next week or weekend; course grades submitted right after that
- Have a great winter break!! Stay in touch – it's great to see where people go after this class!
