

Jennifer Romelfanger, Davor Bonaci,
Kevin Deus, Chaoyu Yang

Problem overview

- No good way to program from a tablet
- Requires a keyboard
- Lots of text on a small screen

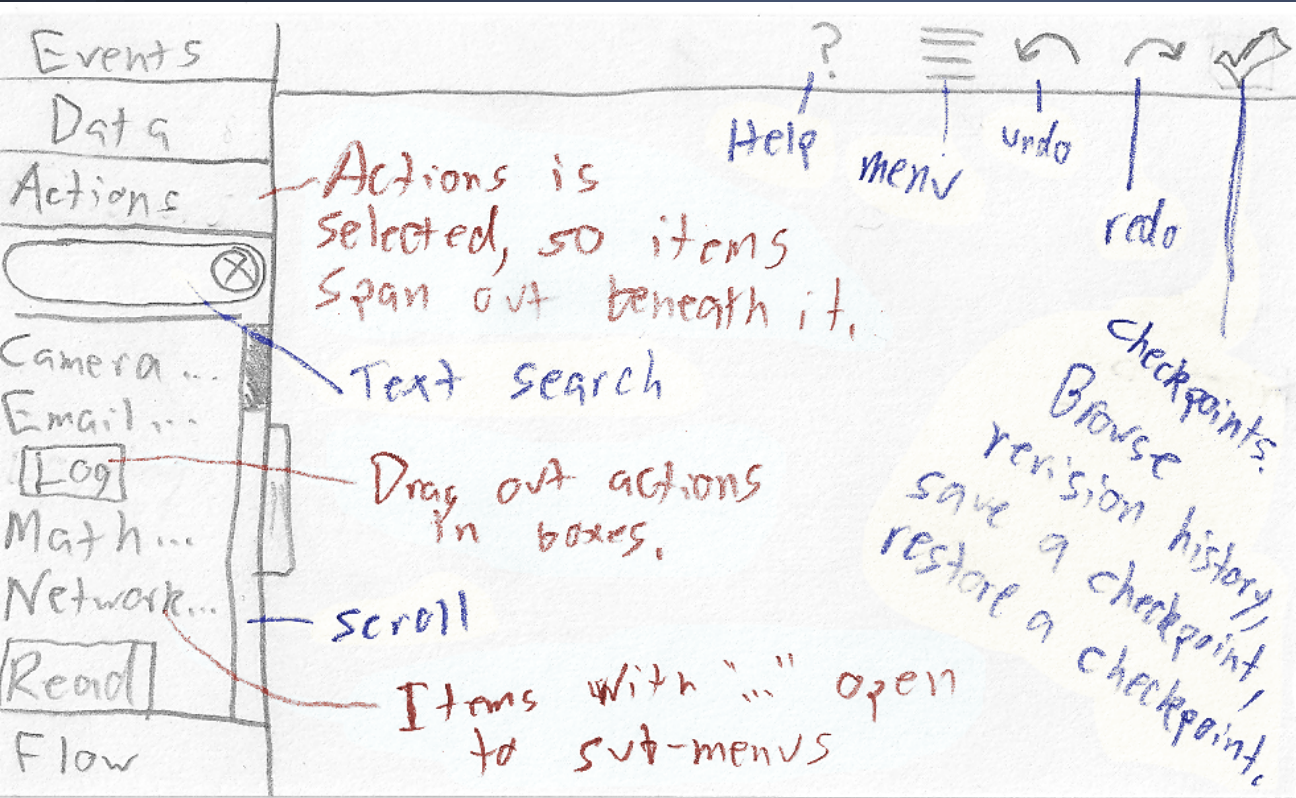

Solution overview

- Focus on small applications
- Few events and actions
- Automating common tasks
- Use touch & common tablet gestures
- Minimize typing

Night is from 6pm to 6am, so you'll need two constraints. They'll both compare the current hour to a constant.

Tag the first dropdown to continue.

# Help System

# Testing methodology

- Initial testing between ourselves
- 4 participants for user testing
  - software engineers
  - good programming skills
  - expert tablet or smartphone users
  - minimal or no tablet programming experience
  - minimal or no data-flow programming
- Environment
  - office / conference room

# Tasks

- Notify a user when a particular item becomes available for online purchase
- Send individual emails to a subset of your contact list
- Take photos periodically and produce a timelapse video

# Tasks

- Log a subset of the contacts list
- Send a group email to the subset of the contacts list
- Send individual emails to a subset of your contact list

# Testing methodology

- Procedure

- Facilitator gives the introduction
- Task description is given on a card
- A tutorial explains how to use the system
- User performs the tasks
- 5-15 minute semi-structured interview at the end

- Test measures

- Subjective: identify trouble spots
- Objective: measure time / number Help invocations

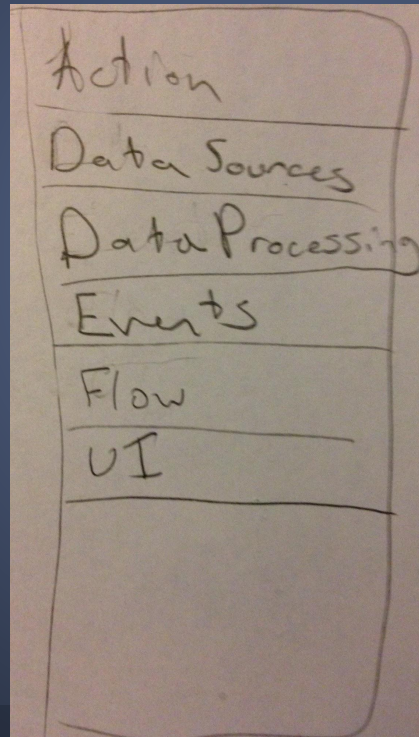

# Test results

- Initial tasks were too hard
- All participants completed full tutorial (12m)
- Objective measures:
  - ~15 minutes per task
  - ~1 usage of the help system per task
- Successes:
  - Tutorial
  - The log
  - Help system

# Test results, negatives

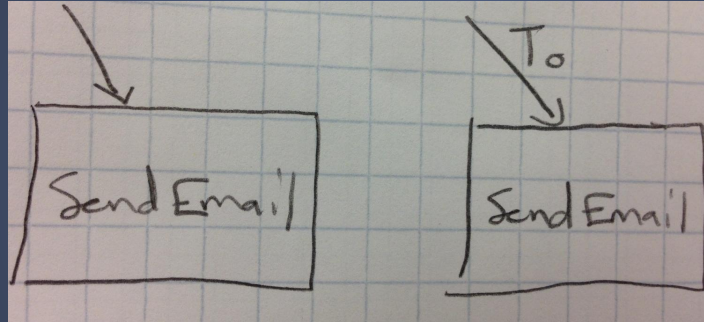

- Some main issues:
  - Confusion about data-flow programming model
  - Trouble finding components in the menu
  - Constraint editor was a pain point
  - Parameter selection was confusing
  - Trouble removing components and connections
  - Typing in constants wasn't intuitive

# Conclusion, Lessons Learned

- Data flow? What's that?
- Visual programming is hard
- Zen mind, Designer's mind
- Do not become attached
- RTFM
- Users will break your interface
- An interactive tablet app...on paper?
