

Due: Tuesday, Feb 16

The reading assignment for the next lecture is from the ATmega328 datasheet and the AVR Instruction Set Reference, which are linked from the HW Web page.

ATmega328 datasheet: Read pages 57 – 74, which describes the ATmega328 interrupt architecture, pages 94 – 105, which covers timers.

We will be going over a lot of this material rather quickly in lecture. If you have not done the reading, you may get lost.

The design assignment comprises those parts of the Lab that you are not able to finish in the Lab session.
