

# Intro, MapReduce & Spark

---

CSEP590A Machine Learning for Big Data

Tim Althoff

PAUL G. ALLEN SCHOOL  
OF COMPUTER SCIENCE & ENGINEERING

# Note: COVID-19 Circumstances

- We realize that this is a hard time for many
- We are committed to a great learning experience for all of you, particularly in these complicated circumstances
- We are making substantial changes to course and teaching to improve your experience.
  - Changes include less homework assignments, practical lab notebooks to work through individually, and more opportunities for project feedback (details later).
- Please understand that this is a complex situation for everyone and bear with us while we work out how to best support you all as the quarter progresses.
- We are very open for feedback through regular surveys. Please let us know your ideas and concerns!

# Break policy

- Default: One break in the middle of class session, in between roughly 2x80 min sessions
- We may adapt this to each day's content

**Data contains value and knowledge**

# Data Mining & Machine Learning

- **But to extract the knowledge data needs to be**
  - Stored (systems)
  - Managed (databases)
  - And **ANALYZED** ← this class

**Data Mining ≈ Big Data ≈  
Predictive Analytics ≈  
Data Science ≈ Machine Learning**

# What This Course Is About

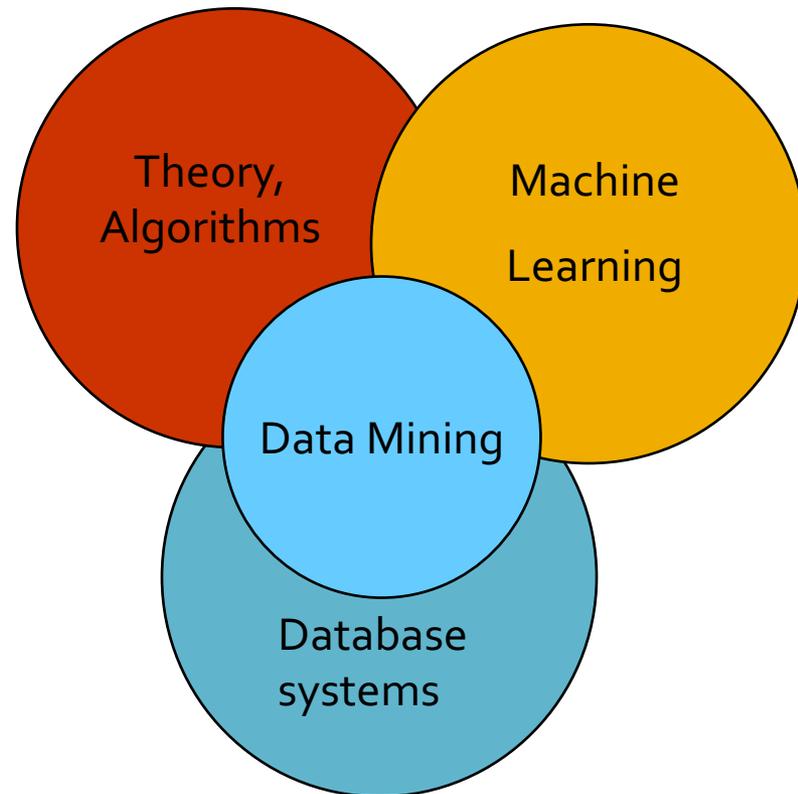

- ***Data mining*** = extraction of actionable information from (usually) very large datasets, is the subject of extreme hype, fear, and interest
- It's not all about machine learning
- But some of it is
- Emphasis in CSEP590A on algorithms that **scale**
  - Parallelization often essential

# Data Mining Methods

- **Descriptive methods**
  - Find human-interpretable patterns that describe the data
    - **Example:** Clustering
- **Predictive methods**
  - Use some variables to predict unknown or future values of other variables
    - **Example:** Recommender systems

# This Class: CSEP590A

- This combines best of machine learning, statistics, artificial intelligence, databases but emphasis on
  - **Scalability** (big data)
  - **Algorithms**
  - **Computing architectures**
  - Automation for handling **large data**

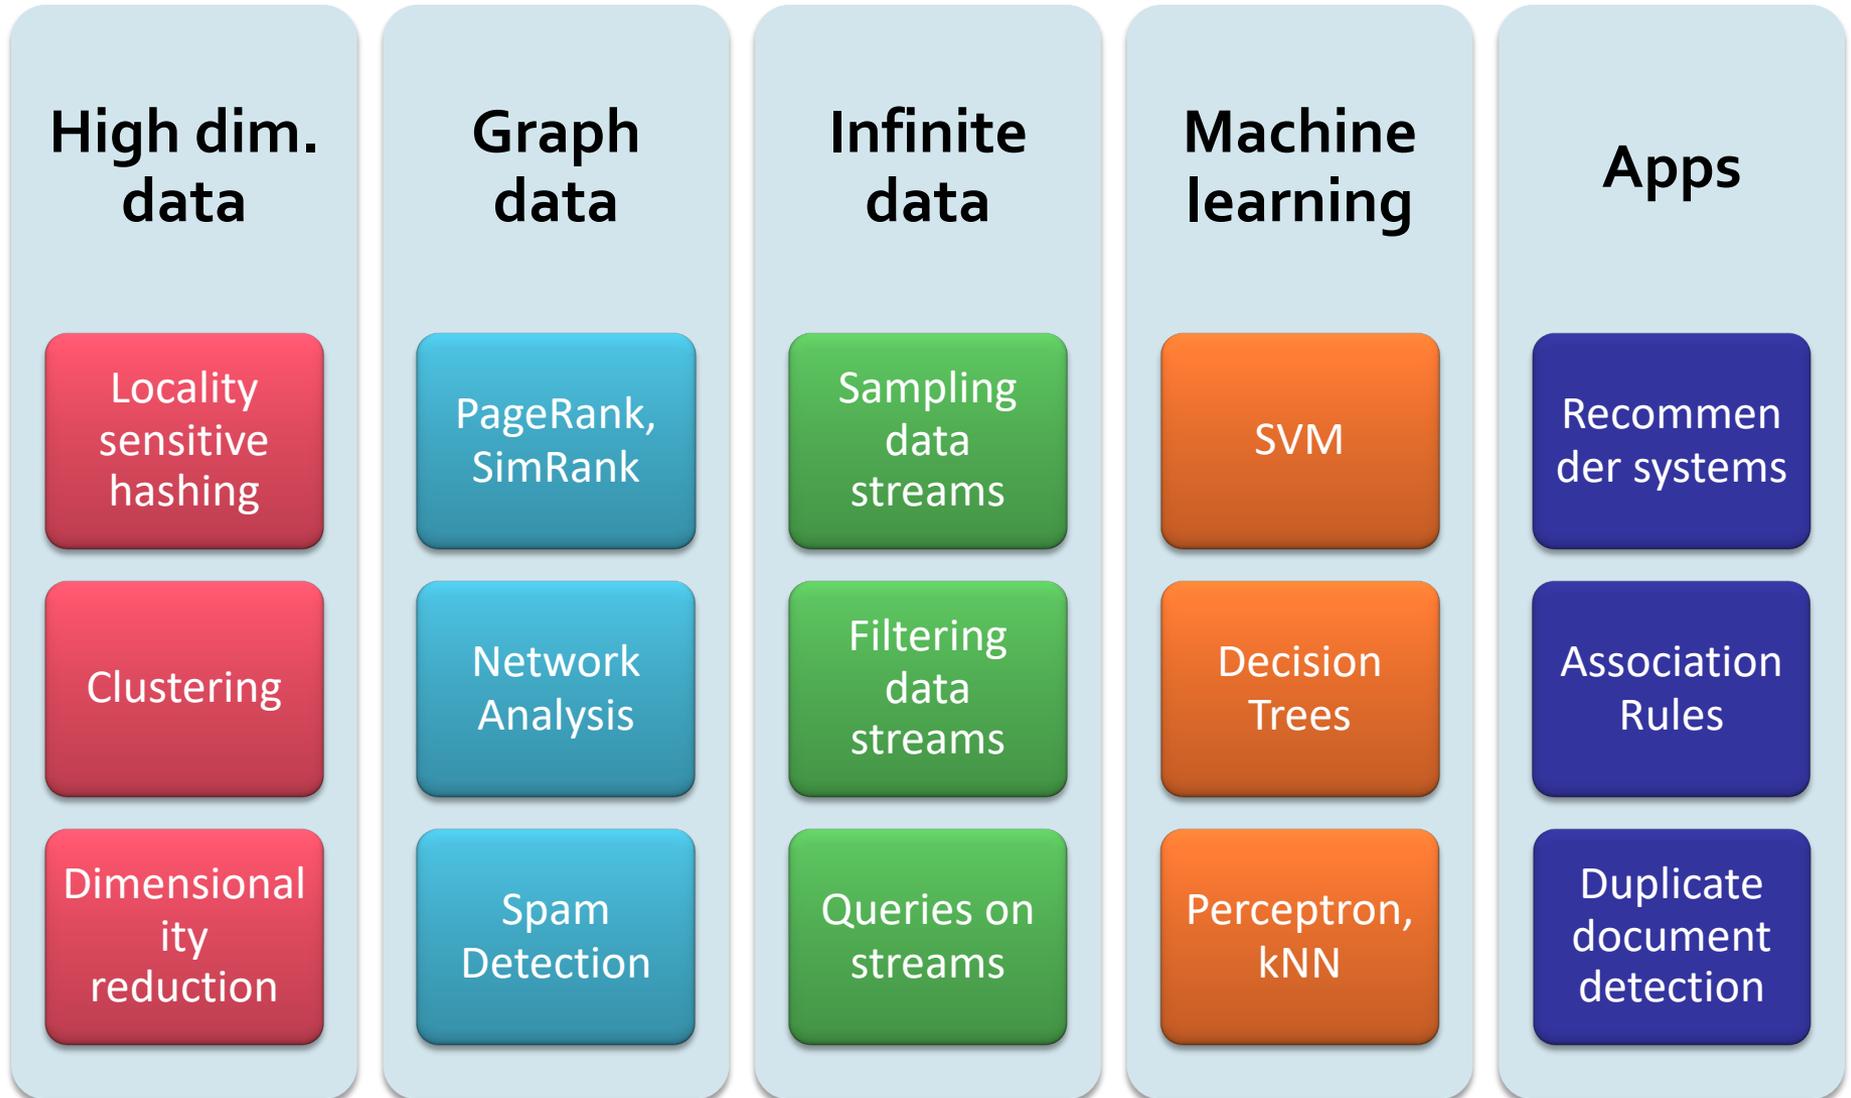

# What will we learn?

- **We will learn to mine different types of data:**
  - Data is high dimensional
  - Data is a graph
  - Data is infinite/never-ending
  - Data is labeled
- **We will learn to use different models of computation:**
  - MapReduce
  - Streams and online algorithms
  - Single machine in-memory

# What will we learn?

- **We will learn to solve real-world problems:**
  - Recommender systems
  - Market Basket Analysis
  - Spam detection
  - Duplicate document detection
- **We will learn various “tools”:**
  - Linear algebra (SVD, Rec. Sys., Communities)
  - Optimization (stochastic gradient descent)
  - Dynamic programming (frequent itemsets)
  - Hashing (LSH, Bloom filters)

# How the Class Fits Together

# How do you want that data?

# Course Logistics

---

# Course Staff

Ken Gu  
(Head TA)

Dong He

Hao Peng

# CS547 Course Staff

## ■ Office hours:

- See course website

<http://www.cs.washington.edu/csep590a>

for TA office hours

- We start Office Hours next week (April 4)

- **Tim:** Thursdays 3:30 – 4:15pm (virtual)

- Exception is next week: Mon 4:30-5:15pm instead

- **TA office hours:** see website and calendar

- All office hours happen via zoom this year to enable remote attendance for everyone

# Course Attendance and Recordings

- Course is **in-person**
  - We make and support exceptions to the best of our ability
  - In person will allow you the best learning experience and interactivity with course staff
- **Attendance is most strongly encouraged**
- **Recordings** will be available through Panopto after class
- We will experiment with live zoom offering
- Disclaimer: If in person attendance and interaction drops significantly, we may reconsider recordings/zoom offering.

# Resources

- **Course website:**  
<http://www.cs.washington.edu/csep590a>
  - Lecture slides (at least 30min before the lecture)
  - Homeworks, readings
- **Class textbook: Mining of Massive Datasets** by A. Rajaraman, J. Ullman, and J. Leskovec
  - Sold by Cambridge Uni. Press but available for free at <http://mmds.org>
  - Course based on textbook and Stanford CS246 course by Leskovec and others

# Logistics: Communication

- **Ed Q&A website:**

- <https://edstem.org/us/courses/21009/discussion/>  
Use Ed for **all questions** and public communication & announcements
  - Search the forum before asking a question
  - Please tag your posts and please no one-liners

- **(Only) for personal matters, email course staff at:**

- [csep590a-instructors@cs.washington.edu](mailto:csep590a-instructors@cs.washington.edu)

- **We will post course announcements to Ed (make sure you check it regularly)**

# Special Tutorials / Recitations

- **Spark tutorial and help session:**
  - April 1, 7:30-8:30 PM, Zoom
  - Dedicated “Spark TA” to help you get started!
- **Review of linear algebra:**
  - April 6, 7:30-8:30 PM, Zoom
- **Review of basic probability and proof techniques**
  - April 7, 7:30-8:30 PM, Zoom

# Work for the Course: Homeworks

- **4 longer homeworks: 40%**
  - Four major assignments, involving programming, proofs, algorithm development.
  - We improve homeworks every year and strive to give you well-defined problems that maximize your learning and minimize your time spent. Sometimes this means lots of instructions. Don't worry – this is there to help you.
  - Assignments take lots of time (+20h). **Start early!!**
- **How to submit?**
  - **Homework write-up:**
    - Submit via [Gradescope](#)
    - Course code: **X3WYKY**
  - **Everyone uploads code:**
    - Put all the code for 1 question into 1 file and submit via Gradescope

# Work for the Course: Colabs

- **Short weekly Colab notebooks: 20%**
  - Colab notebooks are posted every **Wednesday**
    - 10 in total, from 0 to 9, each worth 2%
  - Due one week later on **Wed 6 pm PT. No late days!**
    - First 2 Colabs will be posted on today, including detailed submission instructions to Gradescope (unlimited attempts)
    - Colab 0 (Spark Tutorial) will be **solved in real-time during Spark recitation session!**
  - Colabs require at most **1hr of work**
    - **few lines of code!**
  - “Colab” is a **free cloud service from Google**, hosting **Jupyter notebooks** with free access to GPU and TPU

# Homework Calendar

## ■ Homework schedule (without weekly Colabs)

Date (23:59 PT)	Released	Due
03/30, Today	HW1 (and Colab 0/1)	
04/13, Wed	HW2	HW1
04/20, Wed		<i>Project Proposal</i>
04/27, Wed	HW3	HW2
05/08, Sun		<i>Project Milestone</i>
05/11, Wed	HW4	HW3
05/25, Wed		HW4
06/05, Sun		<i>Project Report + Presentation Video</i>
06/06, Mon		<i>Class Presentations</i>

Does anyone have exam day conflict?

- **Two late periods for HWs for the quarter:**
  - Late period expires 48 hours after the original deadline
  - Can use max 1 late period per HW (not for *Project / Colabs*)

# Work for the Course: Course Project

- **Course Project: 40%**
  - Project proposal (20%)
  - Project milestone report (20%)
    - Why extra milestone? We added this so that we can give you meaningful feedback on your projects and help you learn.
  - Final project report (50%)
  - Project Presentation (10%)
  - *More details on course website*
- Teams of (up to) **three students each**
  - Start planning now
  - Find students in class, office hours, or through Ed
  - Find dataset to work on – also see course website

# Work for the Course: Course Project

- **Project Presentation**
  - **Monday, June 6**, time 6:30-9:20pm
  - **You have to be present!**
  - Location: Remotely on Zoom
  - Exact format will be announced on website
- **Extra credit:** Up to 2% of your grade
  - For participating in Ed discussions
    - Especially valuable are answers to questions posed by other students on Ed, office hours or throughout lectures
  - Reporting bugs in course materials
  - See course website for details

# Prerequisites

- **Programming:** Python
- **Basic Algorithms:** e.g., CS332/CS373 or CS417/CS421
- **Probability:** any introductory course
  - There will be a review session and a review doc is linked from the class home page
- **Linear algebra:** (e.g., Math 308 or equivalent)
  - Another review doc + review session is available
- **Rigorous proofs & Multivariable calculus** (e.g., CS311 or equivalent)
- **Database systems** (SQL, relational algebra)

# What If I Don't Know All This Stuff?

- **Each of the topics listed is important for a small part of the course:**
  - If you are missing an item of background, you could consider just-in-time learning of the needed material. This will typically add to your workload!
- **The exception is programming and basic calculus/stats/linear algebra:**
  - To do well in this course, you really need to be comfortable with writing code (almost everyone chooses Python)

# Collaboration Policy & Academic Integrity

- **We'll follow the standard CS Dept. approach:**  
You can get help, but you ***MUST*** acknowledge the help on the work you hand in
  - [www.cs.washington.edu/academics/misconduct](http://www.cs.washington.edu/academics/misconduct)
- Failure to acknowledge your sources is a ***violation of academic integrity***
- We use plagiarism tools to check the originality of your code

# Collaboration Policy & Academic Integrity

- **You can talk to others about the algorithm(s) to be used to solve a homework problem;**
  - As long as you then mention their name(s) on the work you submit. You still need to come up with your own write-up. Don't just copy it!
- **You should not use code of others or be looking at code of others when you write your own:**
  - You can talk to people but you have to write your own solution/code
  - If you fail to mention your sources, plagiarism tools or TAs will catch you, and you will be charged with a academic integrity violation.

# Final Thoughts

- **CSEP590A is fast paced!**
  - Requires programming maturity
  - Strong math skills
    - Some students tend to be rusty on math/theory
- **Course time commitment:**
  - Homeworks every two weeks that take +20h
  - Significant course project
- Form study groups
- Form project groups
- **It's going to be fun and hard work. 😊**

# 5 To-do items

- **5 to-do items for you:**
  - **Make sure you can access Canvas & Ed**
  - **Register to Gradescope**
  - **Consider attending recitation sessions**
  - **Start planning course project (topic, team, dataset)**
    - Yes, really 😊
  - **Complete Colab 0/1 released today**
    - Colab 0/1 should each take you about one hour to complete (Note this is a “toy” homework to get you started. Real homeworks will be much more challenging and longer.)
- **Additional details/instructions at**  
**<http://www.cs.washington.edu/csep590a>**

# Distributed Computing for Data Mining

---

# Large-scale Computing

- **Large-scale computing for data mining problems on commodity hardware**
- **Challenges:**
  - **How do you distribute computation?**
  - **How can we make it easy to write distributed programs?**
  - **Machines fail:**
    - One server may stay up 3 years (1,000 days)
    - If you have 1,000 servers, expect to lose 1/day
    - With 1M machines 1,000 machines fail every day!

# An Idea and a Solution

- **Issue:**

**Copying data over a network takes time**

- **Idea:**

- Bring computation to data
- Store files multiple times for reliability

- **Spark/Hadoop** address these problems

- **Storage Infrastructure – File system**

- Google: GFS. Hadoop: HDFS

- **Programming model**

- MapReduce
- Spark

# Storage Infrastructure

- **Problem:**

- If nodes fail, how to store data persistently?

- **Answer:**

- **Distributed File System**

- Provides global file namespace

- **Typical usage pattern:**

- Huge files (100s of GB to TB)
- Data is rarely updated in place
- Reads and appends are common

# Distributed File System

## ■ **Chunk servers**

- File is split into contiguous chunks
- Typically each chunk is 16-64MB
- Each chunk replicated (usually 2x or 3x)
- Try to keep replicas in different racks

## ■ **Master node**

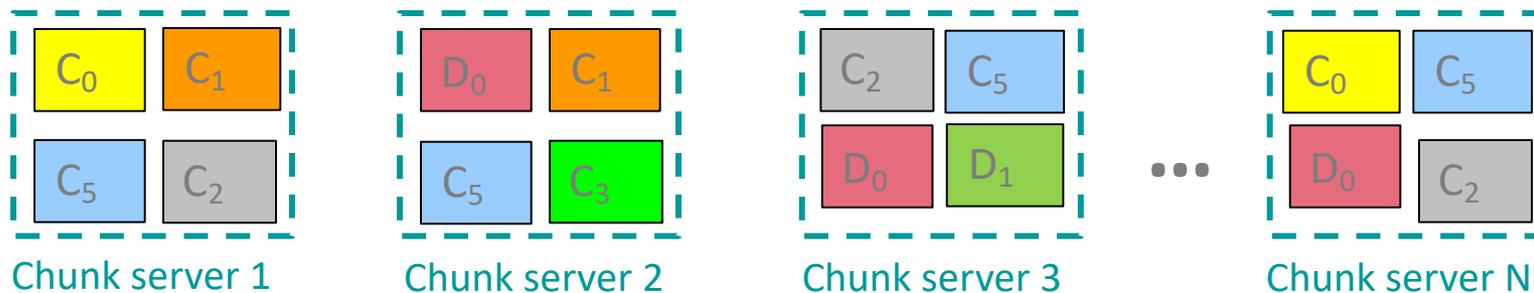

- a.k.a. Name Node in Hadoop's HDFS
- Stores metadata about where files are stored
- Might be replicated

## ■ **Client library for file access**

- Talks to master to find chunk servers
- Connects directly to chunk servers to access data

# Distributed File System

- **Reliable distributed file system**
- Data kept in “chunks” spread across machines
- Each chunk **replicated** on different machines
  - Seamless recovery from disk or machine failure

Bring computation directly to the data!

Chunk servers also serve as compute servers

# Programming Model

- **MapReduce is a **style of programming** designed for:**
  1. Easy parallel programming
  2. Invisible management of hardware and software failures
  3. Easy management of very-large-scale data
- It has several **implementations**, including Hadoop, Spark (used in this class), Flink, and the original Google implementation just called “MapReduce”

# MapReduce: Overview

## 3 steps of MapReduce

### ■ Map:

- Apply a user-written *Map function* to each input element
  - *Mapper* applies the Map function to a single element
    - Many mappers grouped in a *Map task* (the unit of parallelism)
  - The output of the Map function is a set of 0, 1, or more *key-value pairs*.

### ■ Group by key: Sort and shuffle

- System sorts all the key-value pairs by key, and outputs key-(list of values) pairs

### ■ Reduce:

- User-written *Reduce function* is applied to each key-(list of values)

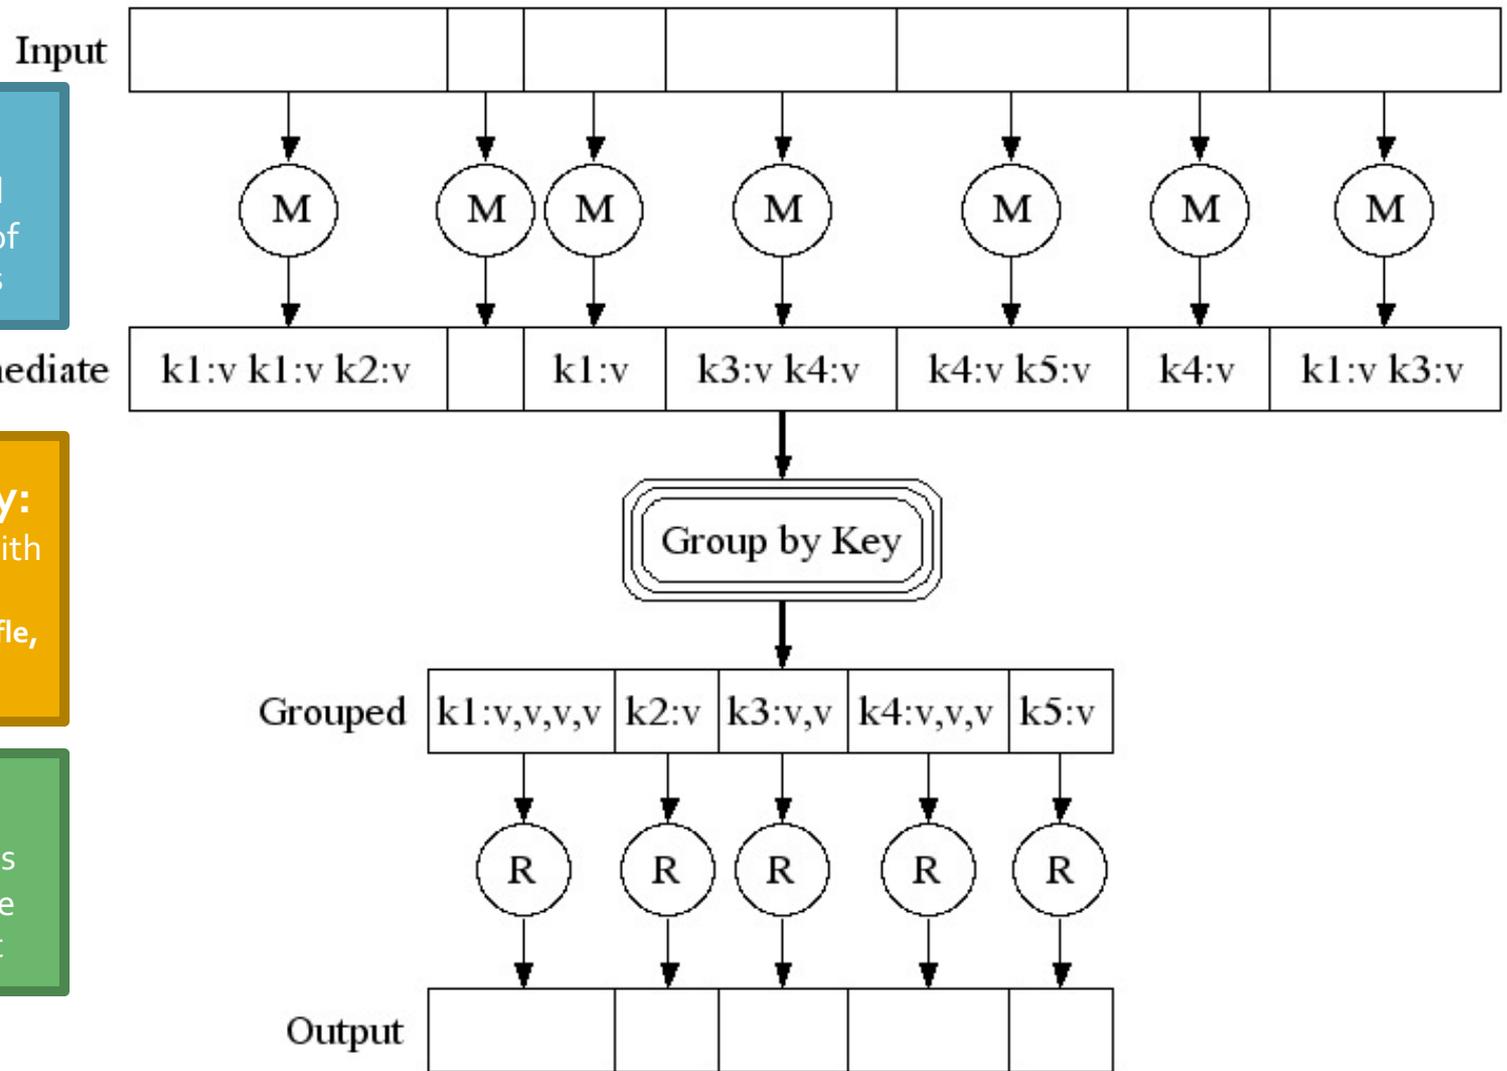

Outline stays the same, Map and Reduce change to fit the problem

# Map-Reduce: A diagram

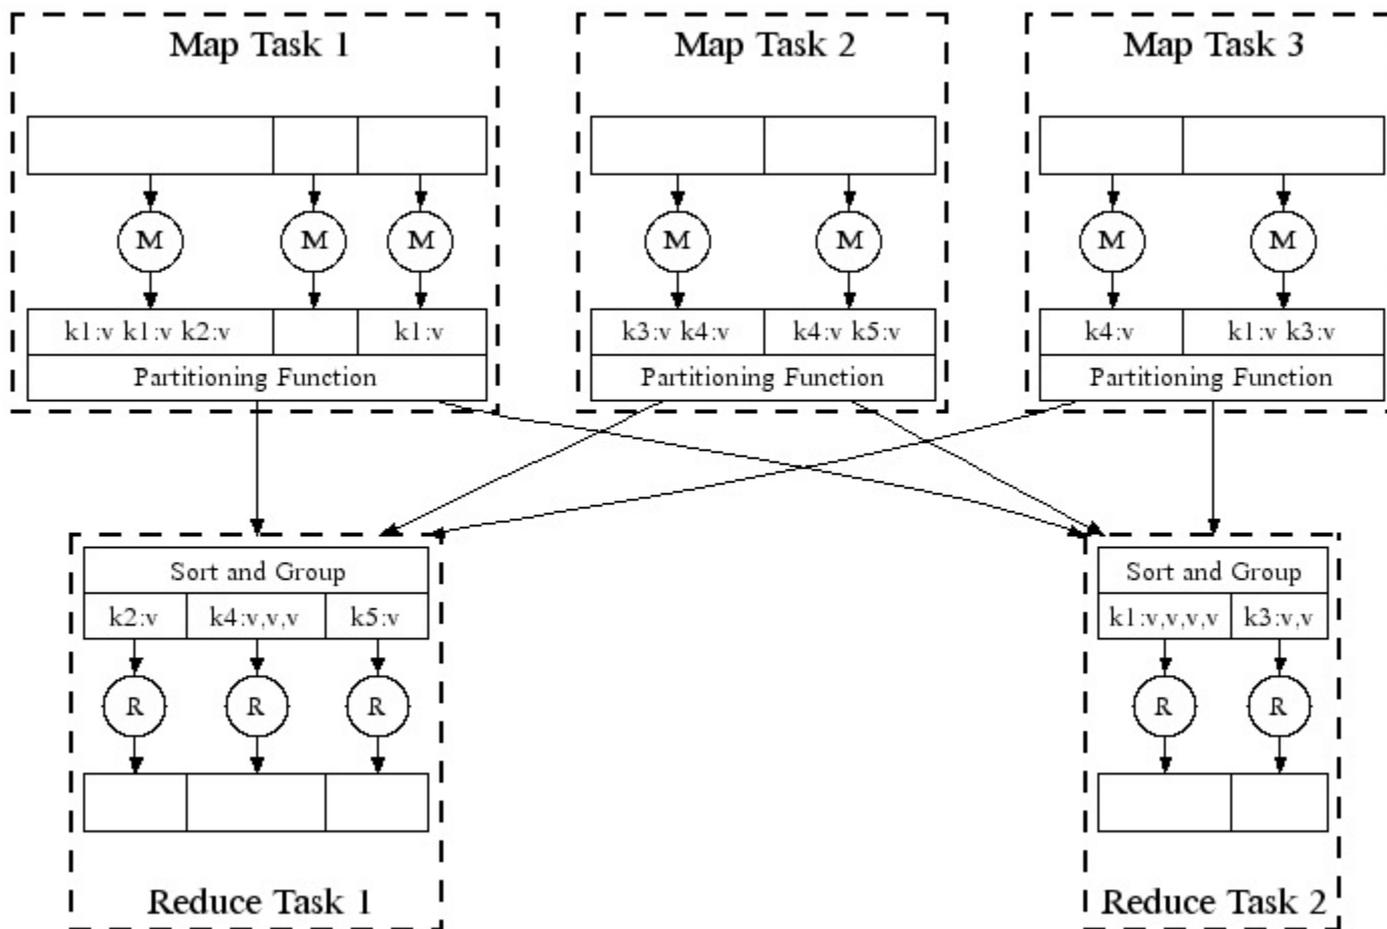

**MAP:**  
Read input and produces a set of key-value pairs

**Group by key:**  
Collect all pairs with same key  
(Hash merge, Shuffle, Sort, Partition)

**Reduce:**  
Collect all values belonging to the key and output

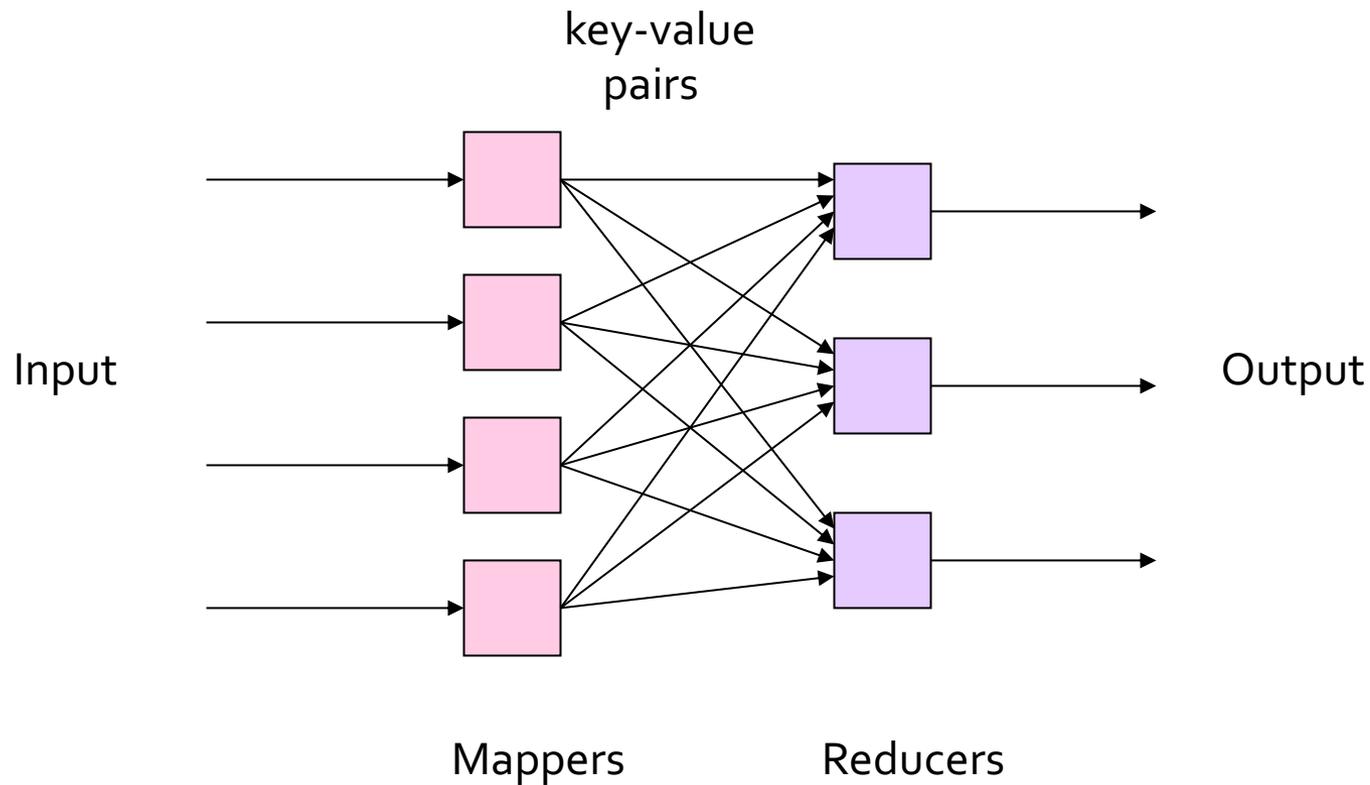

# Map-Reduce: In Parallel

All phases are distributed with many tasks doing the work

# MapReduce Pattern

# Example: Word Counting

## Example MapReduce task:

- We have a huge text document
- Count the number of times each distinct word appears in the file
- **Many applications of this:**
  - Analyze web server logs to find popular URLs
  - Statistical machine translation:
    - Need to count number of times every 5-word sequence occurs in a large corpus of documents

# MapReduce: Word Counting

Provided by the programmer

**MAP:**  
Read input and produces a set of key-value pairs

(The, 1)  
(crew, 1)  
(of, 1)  
(the, 1)  
(space, 1)  
(shuttle, 1)  
(Endeavor, 1)  
(recently, 1)  
....

(key, value)

**Group by key:**  
Collect all pairs with same key

(crew, 1)  
(crew, 1)  
(space, 1)  
(the, 1)  
(the, 1)  
(the, 1)  
(shuttle, 1)  
(recently, 1)  
...

(key, value)

Provided by the programmer

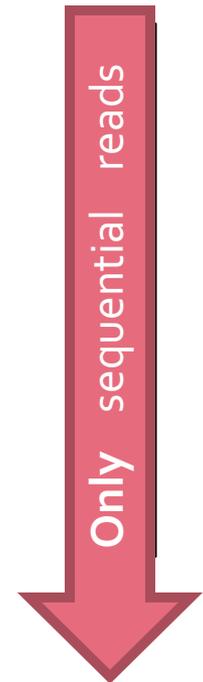

**Reduce:**  
Collect all values belonging to the key and output

(crew, 2)  
(space, 1)  
(the, 3)  
(shuttle, 1)  
(recently, 1)  
...

(key, value)

The crew of the space shuttle Endeavor recently returned to Earth as ambassadors, harbingers of a new era of space exploration. Scientists at NASA are saying that the recent assembly of the Dextre bot is the first step in a long-term space-based man/mache partnership. "The work we're doing now -- the robotics we're doing - is what we're going to need .....

Big document

# Word Count Using MapReduce

**map(key, value) :**

```
# key: document name; value: text of the document
  for each word w in value:
    emit(w, 1)
```

**reduce(key, values) :**

```
# key: a word; value: an iterator over counts
  result = 0
  for each count v in values:
    result += v
  emit(key, result)
```

# MapReduce: Environment

## MapReduce environment takes care of:

- **Partitioning** the input data
- **Scheduling** the program's execution across a set of machines
- Performing the **group by key** step
  - In practice this is the bottleneck
- Handling machine **failures**
- Managing required inter-machine **communication**

# Dealing with Failures

- **Map worker (machine) failure**
  - Map tasks completed or in-progress at worker are reset to idle and rescheduled
  - Reduce workers are notified when map task is rescheduled on another worker
- **Reduce worker failure**
  - Only in-progress tasks are reset to idle and the reduce task is restarted

# Spark

---

# Problems with MapReduce

- **Two major limitations of MapReduce:**
  - Difficulty of programming directly in MR
    - Many problems aren't easily described as map-reduce
  - Performance bottlenecks, or batch not fitting the use cases
    - Persistence to disk typically slower than in-memory work
- **In short, MR doesn't compose well for large applications**
  - Many times one needs to chain multiple map-reduce steps

# Data-Flow Systems

- **MapReduce uses two “ranks” of tasks:**  
One for Map the second for Reduce
  - Data flows from the first rank to the second
- **Data-Flow Systems generalize this in two ways:**
  1. Allow any number of tasks/ranks
  2. Allow functions other than Map and Reduce
    - As long as data flow is in one direction only, we can have the *blocking property* and allow recovery of tasks rather than whole jobs

# Spark: Most Popular Data-Flow System

- **Expressive computing system, not limited to the map-reduce model**
- **Additions to MapReduce model:**
  - Fast data sharing
    - Avoids saving intermediate results to disk
    - Caches data for repetitive queries (e.g. for machine learning)
  - General execution graphs (DAGs)
  - Richer functions than just map and reduce
- **Compatible with Hadoop**

# Spark: Overview

- Open source software (Apache Foundation)
- Supports **Java, Scala and Python**
- **Key construct/idea:** Resilient Distributed Dataset (RDD)
  - More on next slide.
- **Higher-level APIs:** DataFrames & DataSets
  - Introduced in more recent versions of Spark
  - Different APIs for aggregate data, which allowed to introduce SQL support

# Spark: RDD

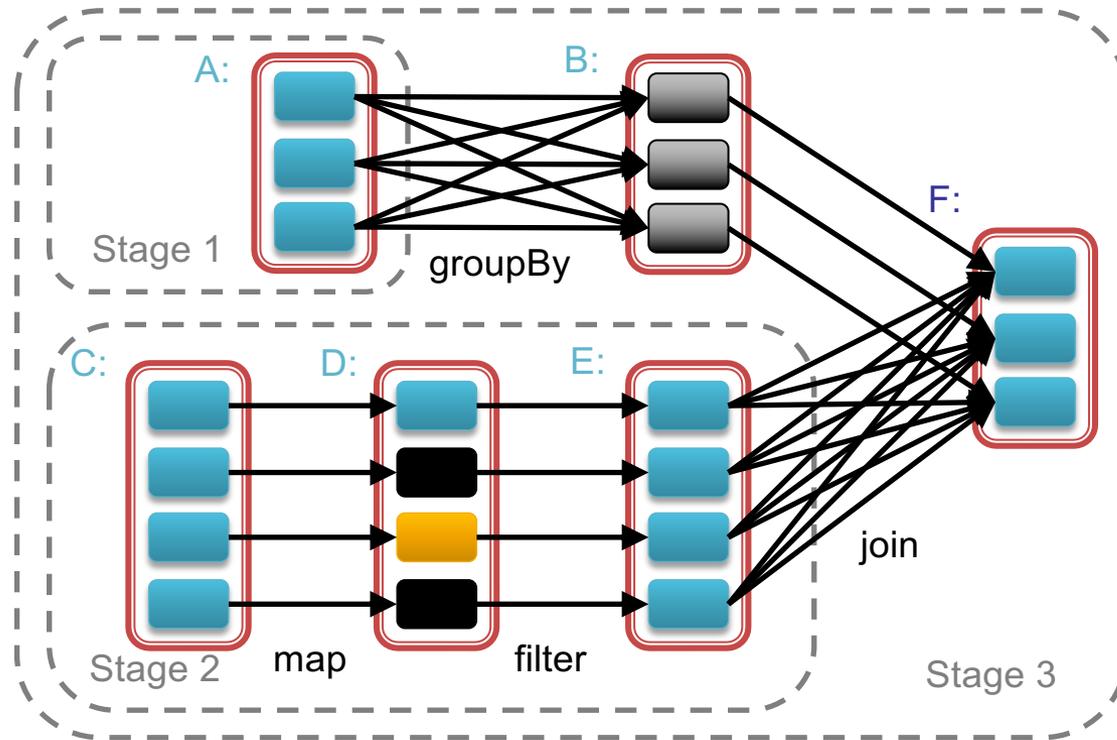

## Key concept *Resilient Distributed Dataset* (RDD)

- Partitioned collection of records
  - Generalizes (key-value) pairs
- Spread across the cluster, Read-only
- Caching dataset in memory
  - Different storage levels available
  - Fallback to disk possible
- RDDs can be created from Hadoop, or by transforming other RDDs (you can stack RDDs)
- RDDs are best suited for applications that apply the same operation to all elements of a dataset

# Spark RDD Operations

- **Transformations** build RDDs through deterministic operations on other RDDs:
  - Transformations include *map, filter, join, union, intersection, distinct*
  - **Lazy evaluation:** Nothing computed until an action requires it
- **Actions** to return value or export data
  - Actions include *count, collect, reduce, save*
  - Actions can be applied to RDDs; actions force calculations and return values

# Task Scheduler: General DAGs

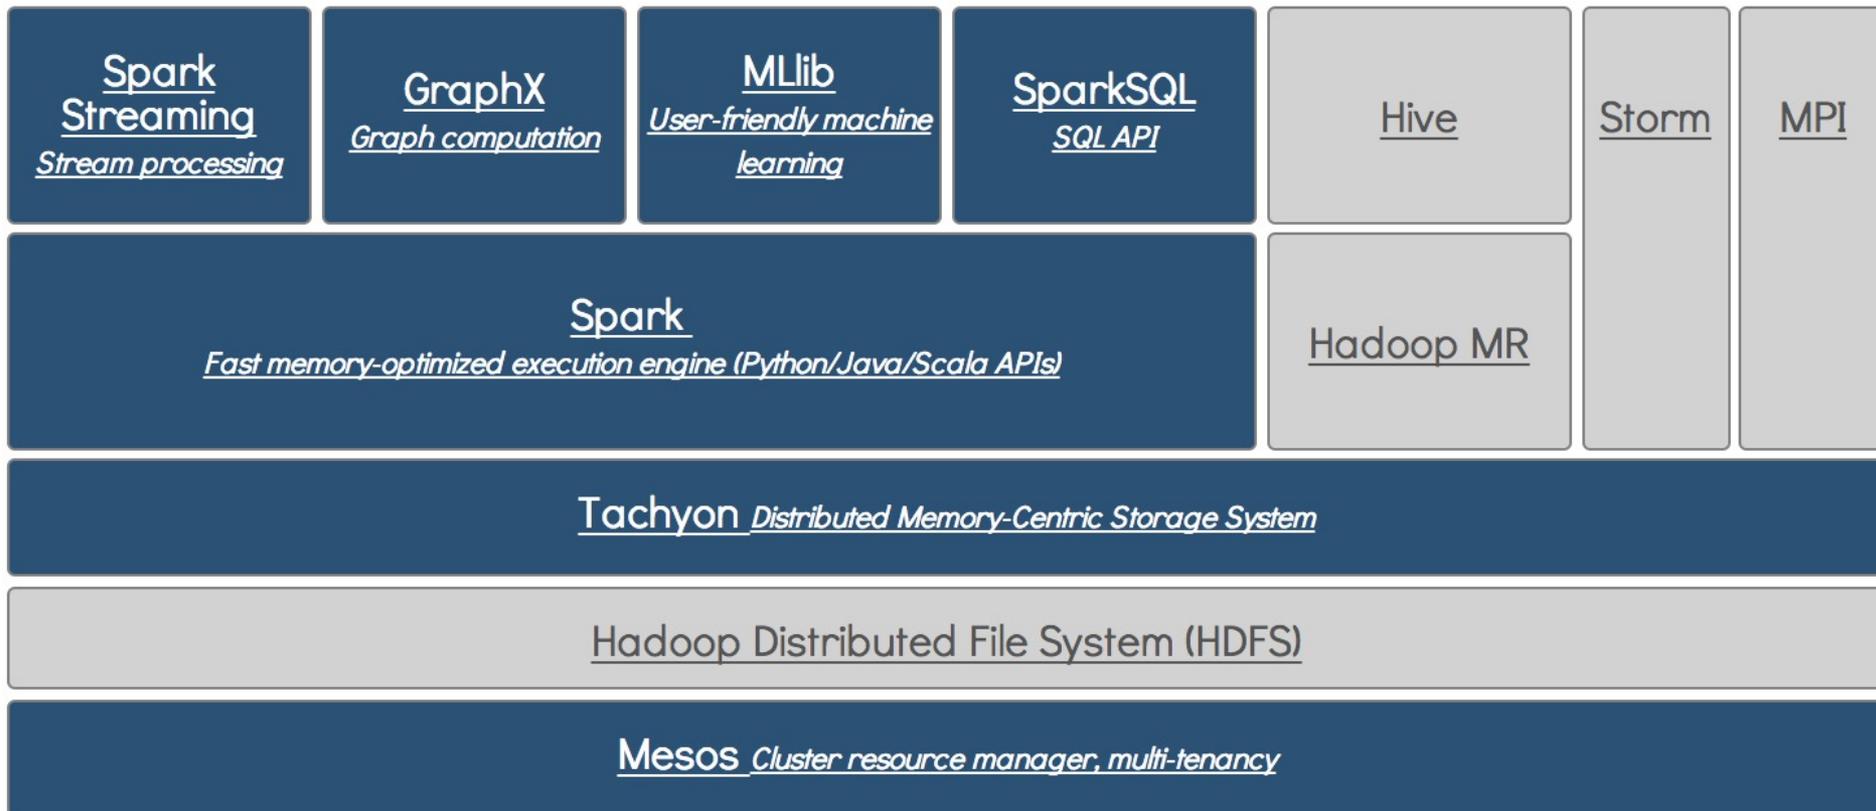

- Supports general task graphs
- Pipelines functions where possible
- Cache-aware data reuse & locality
- Partitioning-aware to avoid shuffles

# Useful Libraries for Spark

- Spark SQL
- Spark Streaming – **stream processing of live datastreams**
- MLlib – **scalable machine learning**
- GraphX – **graph manipulation**
  - extends Spark RDD with Graph abstraction: a directed multigraph with properties attached to each vertex and edge

# Data Analytics Software Stack

# Spark vs. Hadoop MapReduce

- Performance: **Spark normally faster** but **with caveats**
  - Spark can process data in-memory; Hadoop MapReduce persists back to the disk after a map or reduce action
  - Spark generally outperforms MapReduce, but it **often needs lots of memory to perform well**; if there are other resource-demanding services or can't fit in memory, Spark degrades
  - MapReduce easily runs alongside other services with minor performance differences, & works well with the 1-pass jobs (1 map, 1 reduce) it was designed for
- Ease of use: **Spark is easier to program** (higher-level APIs)
- Data processing: **Spark is more general**

# CSEP590A: Machine Learning for Big Data – Reminder of Recitation sessions

- **Spark tutorial and help session: (this Friday)**
  - April 1, 7:30-8:30 PM, Zoom
- **Review of linear algebra:**
  - April 6, 7:30-8:30 PM, Zoom
- **Review of basic probability and proof techniques**
  - April 7, 7:30-8:30 PM, Zoom

# 3 Announcements

## We are releasing HW1 today

- It is due in 2 weeks (4/13 at 6:00pm)
- The homework is long
  - Requires proving theorems as well as coding
- **Please start early**

## Releasing Colab 0 and Colab 1 today

## Recitation sessions:

- **Spark Tutorial using Colab 0:**  
April 1, 7:30-8:30 PM, Zoom

**10 minute break**
