

CSEP 590B, Assignment 4, Due Wednesday, February 4, 6:30 pm

Write a review of the paper "Implementing electronic medical record systems in developing countries," by Hamish Fraser, Paul Biondich, et al., *Informatics in Primary Care*, 2005; 13:83-95.

This paper was published in 2005, and describes several medical record systems projects that were deployed before the development of OpenMRS. Focus your review on how well this paper has withstood the test of time. Were the lessons learned in the early 2000's useful in informing current day deployments of medical record systems? Were the predictions in the paper relatively accurate for how the use of medical record systems in developing countries? What has changed, and what hasn't changed?

Expected length is one to two pages.

Submit all materials by catalyst by 6:30 pm, Wednesday, February 4, 2015. Submit via the dropbox which should be accessible through your catalyst accounts.
