

CSEP 590B, Assignment 7, Due Wednesday, February 25, 6:30 pm

IMCI: Develop a paper prototype of an Android application for the Diarrhoea component of the IMCI. Assume that you are targeting a SmartPhone (and if you want a specific size - lets say a five inch screen). Diarrhoea is on page 3 of the 2014 IMCI handbook.

You should turn in the following

1. A decision tree describing the logic of your application.
2. A sketch of each of the screens for your application.
3. A discussion how your component would fit into a full IMCI application.
4. A discussion of any logical inconsistencies, assumptions, or changes you made in the description.
5. A discussion of usability considerations.

Submit all materials by Catalyst by 6:30 pm, Wednesday, February 25. Submit via the dropbox which will be accessible through your Catalyst accounts.
