

Computing and Global Health
Lecture 2, Surveillance

Winter 2015
Richard Anderson

1/14/2015 University of Washington, Winter 2015 1

Today's topics

- Surveillance problem
- Issues
- Health Information systems
- HISP/DHIS2
- Approaches to last mile data collection

1/14/2015

University of Washington, Winter 2015

2

Readings and Assignments

- Homework 1
 - Design a national immunization equipment monitoring system
- Readings
 - DHIS2 for Ghana
 - Health worker personas
 - Lancet Health

Date	Topic
Jan 7, 2015	Overview
Jan 14, 2015	Surveillance
Jan 21, 2015	Tracking
Jan 28, 2015	Medical records
Feb 4, 2015	Logistics
Feb 11, 2015	Patient support
Feb 18, 2015	Treatment support
Feb 25, 2015	Health worker support
Mar 4, 2015	Behavior change
Mar 11, 2015	Finance

1/7/2015

University of Washington, Winter 2015

3

Assignment 2

- Develop requirements for a software tool to support the district manager in aggregating facility reports and submitting them to the national level.
 - Select one of your three countries as a target
- You may choose the most appropriate level/approach for the requirements

1/14/2015

University of Washington, Winter 2015

4

Nicaragua Case Study

- Strong national epidemiology department
- Second poorest country in the Americas (GDP per capita \$4500)
- Population 5.8 million

1/14/2015

University of Washington, Winter 2015

Nicaragua Health System

- SILAIS (district health office), Hospital, Health center, Health post
- Health post, staffed by one or two people
- Weekly meetings of health post staff at health center

1/14/2015

University of Washington,

6

Facility reporting

- Monthly reporting of disease
 - Roughly 60 diseases listed
 - Age buckets and gender
- Separate immunization reporting
- Additional reporting from hospitals
- Health Post -> Health Center -> Silais -> National

1/14/2015

University of Washington, Winter 2015

7

Data use

- Strong culture of data use
- All health centers visited had recent graphs of health data
- Staff expressed understanding of data and awareness of how it can be used
- Policy and training to support data use

1/14/2015

University of Washington, Winter 2015

8

National Level

- Well established national reporting
 - Procedures for data collection and use in place
 - Run by epidemiologists
- Remote reporting by radio
 - Gradually being phased out
- Custom surveillance software (running on Windows 3.1 in 2010)

1/14/2015

University of Washington, Winter 2015

9

Dengue Surveillance

- Mosquito born disease of growing importance
 - Breakbone fever
 - Highly seasonal
- Case tracking
 - Early warning of outbreaks
 - Mitigation (e.g., mosquito control)
 - 2009 Nicaragua introduced a Frontline SMS reporting system

1/14/2015

University of Washington, Winter 2015

10

Nicaragua Summary

- Relatively successful surveillance system
 - Procedures appear to work
 - Understanding of use of data
- Multiple different reporting systems in place as of 2010 with out of date technology
- Country faces challenges of low income and remote areas
- Strengths
 - Strong public health system
 - Small country
 - Improving infrastructure

1/14/2015

University of Washington, Winter 2015

11

Surveillance

- Collect aggregate health data at national level
- Not associated with the individual
- Health statistics, not data for treatment of individuals

1/14/2015

University of Washington, Winter 2015

12

Routine surveillance vs. Surveys

Country surveillance

- Routine submission with a fixed period
- Goal of complete coverage
- Data collection and entry one of many tasks by workers
- Small amount of data per form
- Limited resources for training, implementation, and supervision

NGO led survey

- Single instance
- Goal of statistical significance through sampling
- Data collection by dedicated workers
- Complex data collection
- Large amount of data

University of Washington, Winter 2015

Challenges

- Standard problems associated with surveys
 - Statistical significance
 - Form design
 - Data errors
- ICTD Problems
 - Peripheral Data Collection
 - Health information systems for developing countries

1/14/2015

University of Washington, Winter 2015

14

What if the information you needed to make any decision was easy to access?

POPULATION TALLY SHEET
WOMEN 15-45 YEARS OF AGE

District: _____

Date: _____

Health Facility (PHU): _____ Character/Zone: _____ Date: 1/17/05

ANTIGEN	Women 15-45 Years					Total	Pregnant Women		Total
	00000	00000	00000	00000	00000		00000	00000	
DT1	00000	00000	00000	00000	00000	00000	00000	00000	00000
	00000	00000	00000	00000	00000	00000	00000	00000	00000
	00000	00000	00000	00000	00000	00000	00000	00000	00000
	00000	00000	00000	00000	00000	00000	00000	00000	00000
	00000	00000	00000	00000	00000	00000	00000	00000	00000
	00000	00000	00000	00000	00000	00000	00000	00000	00000
	00000	00000	00000	00000	00000	00000	00000	00000	00000

DEATH REGISTRATION ACCORDING TO SELECTED CAUSES

CAUSE OF DEATH	0-14 YRS			15-44 YRS			45-64 YRS			65+ YRS			TOTAL
	M	F	T	M	F	T	M	F	T	M	F	T	
DIARRHOEAL FEVER													
MALARIA													
PROTEINURIA													
TUBERCULOSIS													
HAEEMORRAGE													
MEASLES													
POLIOMYELITIS													
HEPATIC ENCEPHALOPATHY													
TUBERCULOSIS													
HEPATIC ENCEPHALOPATHY													
OTHER													
TOTAL													

DATE COMPLETED: _____

Key Issues

- Why collect data
- What are indicators
- Institutional challenges
 - Pressure of Data collection from the top
 - Practical challenge
 - Reporting takes too long
- Getting data to be used
- Data at the facility level
- Processes in data reporting
- Role of technology for data collection

1/14/2015 University of Washington, Winter 2015 21

Why collect data ?

- External
 - Donors, Global bodies, Research
- Global program goals
 - Elimination of Polio – need to know all suspected cases (AFP): polioeradication.org
- Strengthen country programs
- Allocate resources
- Address specific problems

1/14/2015 University of Washington, Winter 2015

What are indicators?

- Measurable variable to assess underlying variable
 - Attendance at church to measure religiosity
- How to measure quality of immunization
 - Percentage of kids receiving 3rd dose of BCG
- Issues
 - Standardization
 - Denominators
 - Indicator growth

1/14/2015 University of Washington, Winter 2015

Institutional challenges

- Indicators established at the central level
- Data collected at the facility
- Pressure from Donors to collect domain specific data
 - Explosion of data required
 - Development of parallel information systems

University of Washington, Winter 2015 24

Data Latency

- Data registration and collection latency
- Data reporting and capturing latency
- Data transmission latency
- Data processing and analysis latency
- Data feedback and dissemination latency

1/14/2015 University of Washington, Winter 2015 25

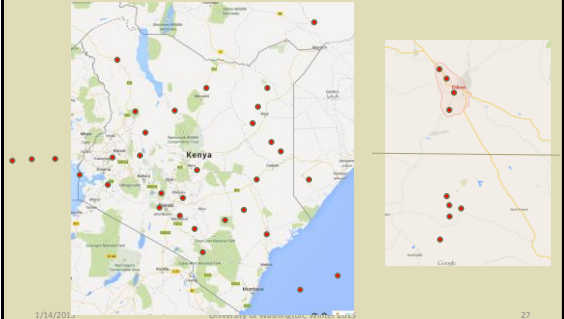

Data use

- Everybody wants this to happen
- Requires lots of work to make this happen
- Organizational and political

Information use maturity model

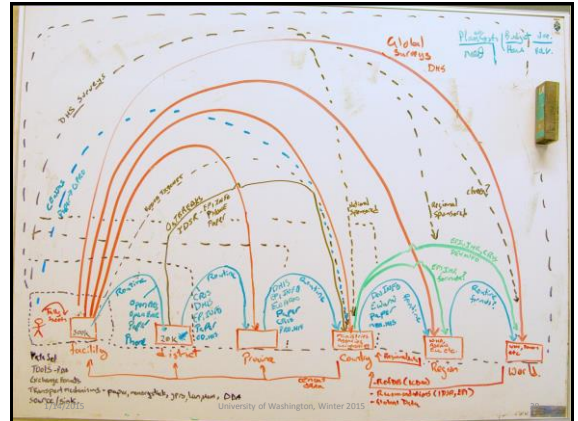

1. Technically working information system, emphasizing data completeness
2. Information system characterized by analysis, use and feedback of data
3. Information system shows evidence of impact on decision-making

If no one uses data, its probably wrong

Facility environment

- Differences in scale between different types
 - Hospital: Administrative staff, multiple doctors
 - Health Center: Small number of doctors
 - Health post: one or two health workers
- Data kept in registers
 - Dozens of different registers

Processes

- Data entry
- Data submission
- Data approval
- Data aggregation

1. Number of Antenatal visits	1 visit	2-4	5-7	8-10	11-14	15-18	19-22	23-26	27-30
2. No. of at risk ANC Cases	18 years	>25 years	Primis	Parity 4+	Sirolin Cat				
3. No. of pregnant women immunized									
4. No. of pregnant women screened for STIs									
5. Total No. of deliveries	Done by staff	Done by TBAs	Completed						
6. No. of maternal deaths									
7. No. of infants born alive	OP1	OP2	OP3	OP4	OP5	OP6	OP7	OP8	OP9
8. Total No. of - fees	Examined	Screened	Waiting						
9. No. of bed-nets distributed									
10. No. of pregnant women that received IPT	1 Dose	2 Doses							
11. Did your facility run out of SP drugs continuously for 2 weeks during the reporting period?									
12. Did your facility run out of anti-malarial drugs continuously for 2 weeks during the reporting period?									

Role of information and communication technology

- Data entry
- Data transport
- Aggregation
- Storage
- Use

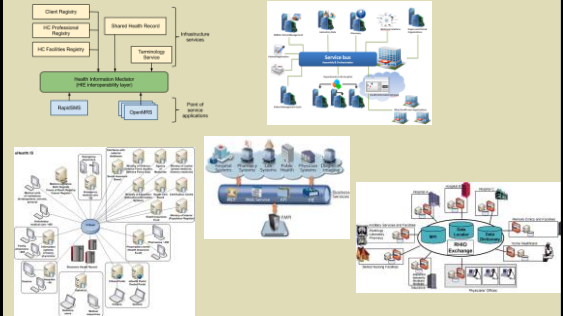

Data reporting technologies

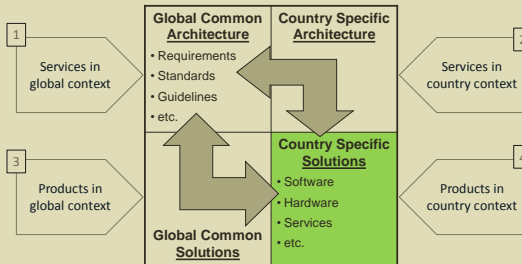

- Web forms
- eMail
- Feature phone
- Smart Phone
- SMS
- Paper to Digital

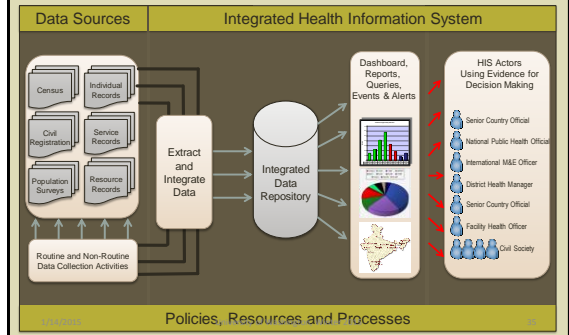

Health Information Systems

2x2 Architecture Grid (Lubinski)

Conceptual HIS Framework

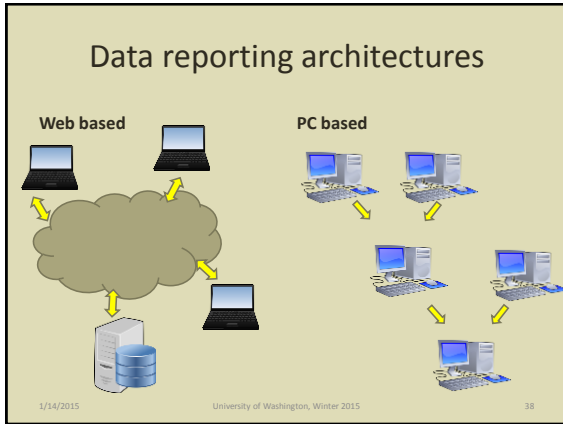

General Problem

- Information system integration
 - Parallel systems
 - Uniform system
- Enterprise architecture
 - But countries are not companies

Integrated health data reporting

- National issues
- Stake holder conflicts

PC Applications are not dead yet!

CCEM: Cold Chain Equipment Manager
Microsoft access software for managing inventory of vaccine cold chain equipment

1/14/2015 University of Washington, Winter 2015 39

Norad

HISP

- Health Information System Program
 - University of Oslo, Norway
 - Informatics Program with global ties
 - Manages DHIS2 software
 - Focus on Action Research

1/14/2015 University of Washington, Winter 2015 40

DHIS2

- District Health Information System 2
- Open source software for health system data reporting
 - Submit monthly reports
 - View data
- Design allows customization at country level

1/14/2015 University of Washington, Winter 2015 41

HISP History

- Initiated in post apartheid South Africa
 - Improve public health system
 - Activist led
 - Scandinavian participatory design and action research
- Open source application built on top of MS Access for South Africa
- Introduction to other countries
 - Mozambique, India, Vietnam, Cuba
 - Technical and political challenges
- Transition for DHIS 1.4 to DHIS 2.0
- Development of University Programs
- Establishment of HISP India to support state wide rollout in India
- Adoption of DHIS2 in multiple countries as national HIS

1/14/2015 University of Washington, Winter 2015 42

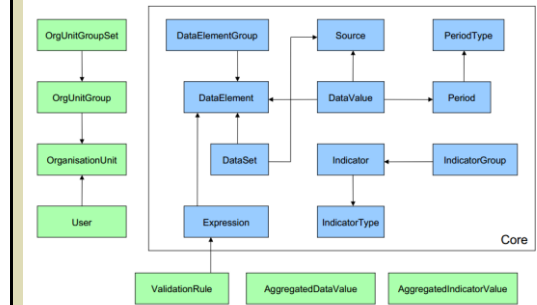

DHIS2 Deployments

1/14/2015 University of Washington, Winter 2015 43

DHIS2 concepts and data models

- Data elements: atomic units (but can be disaggregated by dimensions age/sex)
- Data set: collection of data elements
- Period: Dates (with periodicity)
- OrgUnit: Location
- Indicators

Domain model

Application design

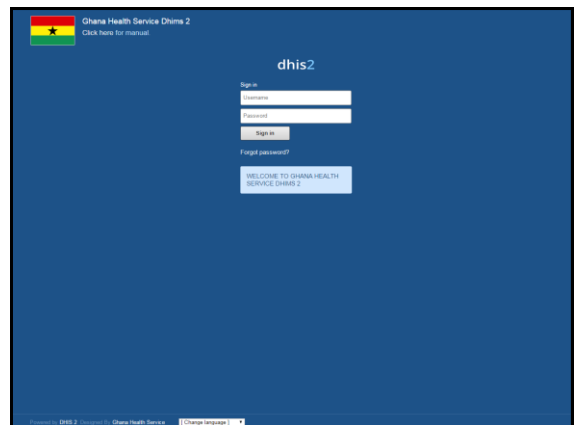

"DHIS 2 core developers" team

Open Source

- HISP Oslo manages DHIS2 as a global, open source project
- BSD License
- Distributed development
 - India, Vietnam, Norway
- Strong emphasis in developing country capacity
 - DHIS2 Academy

HISP Case Study

Health Information Systems

- Challenges
 - Collection of irrelevant data
 - Poor data quality
 - Poor timeliness of reporting
 - Parallel and duplicate data collection
 - Low information usage and poor feedback
- Donor driven reporting
 - Lack of requested data elements in national reporting
 - Development of parallel reporting systems

1/14/2015

University of Washington, Winter 2015

50

DHIMS

- 2007: Roll out of District Health Information Management System
- 2008: Health Metrics Network (HMN), framework for integrated HIS
- 2011: Implementation of DHIMS2 in DHIS2

1/14/2015

University of Washington, Winter 2015

51

DHIMS2 vs. DHIMS

- Centralization of expertise
 - Greater expertise needed, but can be centralize
- Improved data flow and reporting speed
- Increased access to information
 - No longer restricted to a local database
- Consistent national deployment
 - Avoid inconsistent development in different areas
- Substantial capacity development

1/14/2015

University of Washington, Winter 2015

52

Why Open Source?

1/14/2015

University of Washington, Winter 2015

53

Last mile data reporting

1/14/2015

University of Washington, Winter 2015

54

Internet

1/14/2015

University of Washington, Winter 2015

55

Feature phone

1/14/2015 University of Washington, Winter 2015 56

Smart phone / ODK

1/14/2015 University of Washington, Winter 2015 57

SMS

1/14/2015 University of Washington, Winter 2015 58

SMS Wheel
