

## Asymptotic Analysis

CSE 326  
Data Structures & Algorithms  
Ruth Anderson  
Winter 2010

## Today's Outline

- **Announcements**
  - Written Homework #1, released later today, due Fri, Jan 15<sup>th</sup> at the *beginning of lecture*.
- **Asymptotic Analysis**

1/08/10

2

## Exercise

2	3	5	16	37	50	73	75	126
---	---	---	----	----	----	----	----	-----

```
bool ArrayFind(int array[], int n, int key){  
    // Insert your algorithm here
```

*What algorithm would you choose  
to implement this code snippet?*

1/08/10

3

## Analyzing Code

<b>Basic Java operations</b>	Constant time
<b>Consecutive statements</b>	Sum of times
<b>Conditionals</b>	Larger branch plus test
<b>Loops</b>	Sum of iterations
<b>Function calls</b>	Cost of function body
<b>Recursive functions</b>	Solve recurrence relation

*Analyze your code!*

1/08/10

4

## Linear Search Analysis

```
bool LinearArrayFind(int array[],  
                     int n,  
                     int key) {  
    for( int i = 0; i < n; i++ ) {  
        if( array[i] == key )  
            // Found it!  
            return true;  
    }  
    return false;  
}
```

Best Case:
Worst Case:

1/08/10

5

## Binary Search Analysis

```
bool BinArrayFind( int array[], int low,  
                   int high, int key ) {  
    // The subarray is empty  
    if( low > high ) return false;  
  
    // Search this subarray recursively  
    int mid = (high + low) / 2;  
    if( key == array[mid] ) {  
        return true;  
    } else if( key < array[mid] ) {  
        return BinArrayFind( array, low,  
                            mid-1, key );  
    } else {  
        return BinArrayFind( array, mid+1,  
                            high, key );  
    }
```

Best case:
Worst case:

1/08/10

6

## Solving Recurrence Relations

1. Determine the recurrence relation. What is the base case(s)?
2. “Expand” the original relation to find an equivalent general expression *in terms of the number of expansions*.
3. Find a closed-form expression by setting *the number of expansions* to a value which reduces the problem to a base case

1/08/10

7

## Linear Search vs Binary Search

	Linear Search	Binary Search
Best Case		
Worst Case		

So ... which algorithm is better?  
What tradeoffs can you make?

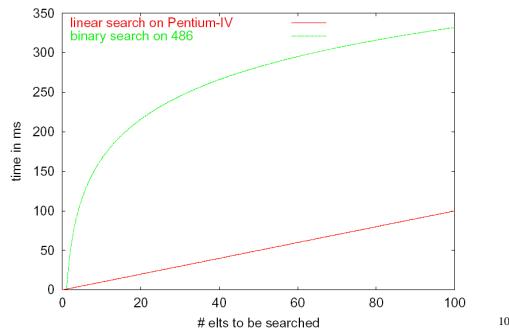

1/08/10

8

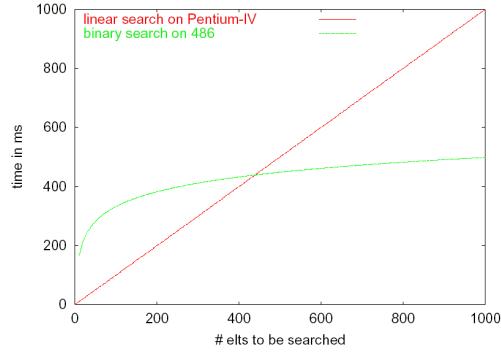

## Fast Computer vs. Slow Computer

## Fast Computer vs. Smart Programmer (round 1)

## Fast Computer vs. Smart Programmer (round 2)

## Asymptotic Analysis

- Asymptotic analysis looks at the *order* of the running time of the algorithm
  - A valuable tool when the input gets “large”
  - Ignores the *effects of different machines or different implementations* of the same algorithm
- Intuitively, to find the asymptotic runtime, throw away the constants and low-order terms
  - Linear search is  $T(n) = 3n + 2 \in \Theta(n)$
  - Binary search is  $T(n) = 4 \log_2 n + 4 \in \Theta(\log n)$

*Remember: the fastest algorithm has the slowest growing function for its runtime*

1/08/10

12

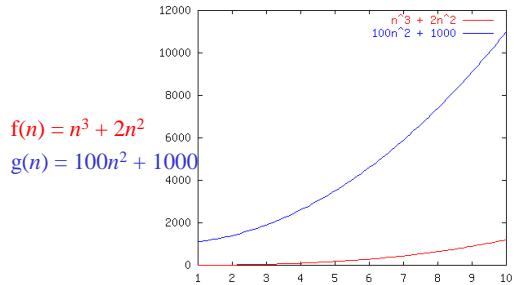

## Asymptotic Analysis

- Eliminate low order terms
  - $4n + 5 \Rightarrow$
  - $0.5 n \log n + 2n + 7 \Rightarrow$
  - $n^3 + 2n^2 + 3n \Rightarrow$
- Eliminate coefficients
  - $4n \Rightarrow$
  - $0.5 n \log n \Rightarrow$
  - $n \log n^2 \Rightarrow$

1/08/10

13

## Order Notation: Intuition

Although not yet apparent, as  $n$  gets “sufficiently large”,  $f(n)$  will be “greater than or equal to”  $g(n)$ <sup>14</sup>

1/08/10

## Definition of Order Notation

- Upper bound:  $T(n) = O(f(n))$       Big-O  
 Exist constants  $c$  and  $n'$  such that  
 $T(n) \leq c f(n)$  for all  $n \geq n'$
- Lower bound:  $T(n) = \Omega(g(n))$       Omega  
 Exist constants  $c$  and  $n'$  such that  
 $T(n) \geq c g(n)$  for all  $n \geq n'$
- Tight bound:  $T(n) = \Theta(f(n))$       Theta  
 When both hold:  
 $T(n) = O(f(n))$   
 $T(n) = \Omega(f(n))$

1/08/10

15

## Order Notation: Definition

$O(f(n))$  : a set or class of functions

$g(n) \in O(f(n))$  iff there exist consts  $c$  and  $n_0$  such that:

$g(n) \leq c f(n)$  for all  $n \geq n_0$

Example:  $g(n) = 1000n$  vs.  $f(n) = n^2$

Is  $g(n) \in O(f(n))$ ?

Pick:  $n_0 = 1000$ ,  $c = 1$

1/08/10

16

## Notation Notes

**Note:** Sometimes, you'll see the notation:

$$g(n) = O(f(n)).$$

This is equivalent to:

$$g(n) \text{ is } O(f(n)).$$

**However:** The notation

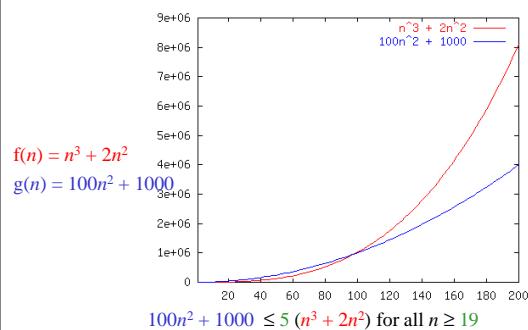

$$O(f(n)) = g(n) \quad \text{is meaningless!}$$

(in other words big-O “equality” is not symmetric)

1/08/10

17

## Order Notation: Example

1/08/10

18

## Big-O: Common Names

- constant:  $O(1)$
- logarithmic:  $O(\log n)$  ( $\log_k n$ ,  $\log n^2$  is  $O(\log n)$ )
- log-squared:  $O(\log n)^2$  ( $\log n$ )<sup>2</sup> =  $\log^2 n$
- linear:  $O(n)$
- log-linear:  $O(n \log n)$
- quadratic:  $O(n^2)$
- cubic:  $O(n^3)$
- polynomial:  $O(n^k)$  ( $k$  is a constant)
- exponential:  $O(c^n)$  ( $c$  is a constant  $> 1$ )

1/08/10

19

## Meet the Family

- $O(f(n))$  is the set of all functions asymptotically less than or equal to  $f(n)$ 
  - $o(f(n))$  is the set of all functions asymptotically strictly less than  $f(n)$
- $\Omega(f(n))$  is the set of all functions asymptotically greater than or equal to  $f(n)$ 
  - $\omega(f(n))$  is the set of all functions asymptotically strictly greater than  $f(n)$
- $\Theta(f(n))$  is the set of all functions asymptotically equal to  $f(n)$

1/08/10

20

## Meet the Family, Formally

- $g(n) \in O(f(n))$  iff  
There exist  $c$  and  $n_0$  such that  $g(n) \leq c f(n)$  for all  $n \geq n_0$ 
  - $g(n) \in o(f(n))$  iff  
There exists a  $n_0$  such that  $g(n) < c f(n)$  for all  $c$  and  $n \geq n_0$   
Equivalent to:  $\lim_{n \rightarrow \infty} g(n)/f(n) = 0$
- $g(n) \in \Omega(f(n))$  iff  
There exist  $c > 0$  and  $n_0$  such that  $g(n) \geq c f(n)$  for all  $n \geq n_0$ 
  - $g(n) \in \omega(f(n))$  iff  
There exists a  $n_0$  such that  $g(n) > c f(n)$  for all  $c$  and  $n \geq n_0$   
Equivalent to:  $\lim_{n \rightarrow \infty} g(n)/f(n) = \infty$
- $g(n) \in \Theta(f(n))$  iff  
 $g(n) \in O(f(n))$  and  $g(n) \in \Omega(f(n))$

1/08/10

21

## Big-Omega et al. Intuitively

Asymptotic Notation	Mathematics Relation
$O$	$\leq$
$\Omega$	$\geq$
$\Theta$	$=$
$o$	$<$
$\omega$	$>$

1/08/10

22

## Pros and Cons of Asymptotic Analysis

1/08/10

23

## Types of Analysis

Two orthogonal axes:

- **bound flavor**
  - upper bound ( $O$ ,  $o$ )
  - lower bound ( $\Omega$ ,  $\omega$ )
  - asymptotically tight ( $\Theta$ )
- **analysis case**
  - worst case (adversary)
  - average case
  - best case
  - "amortized"

24

Which Function Grows Faster?

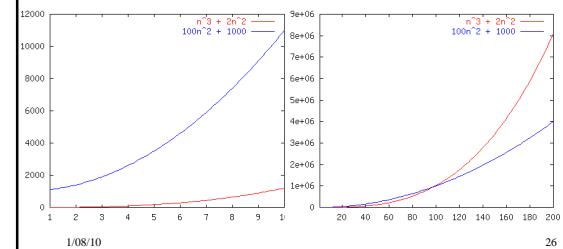

$$n^3 + 2n^2 \text{ vs. } 100n^2 + 1000$$

1/08/10

25

Which Function Grows Faster?

$$n^3 + 2n^2 \text{ vs. } 100n^2 + 1000$$

Which Function Grows Faster?

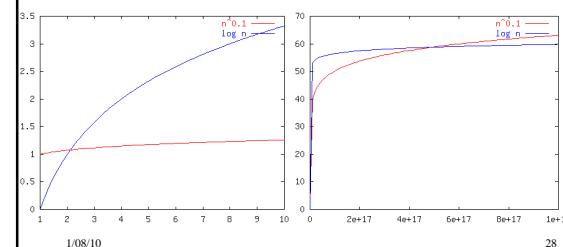

$$n^{0.1} \text{ vs. } \log n$$

1/08/10

27

Which Function Grows Faster?

$$n^{0.1} \text{ vs. } \log n$$

Which Function Grows Faster?

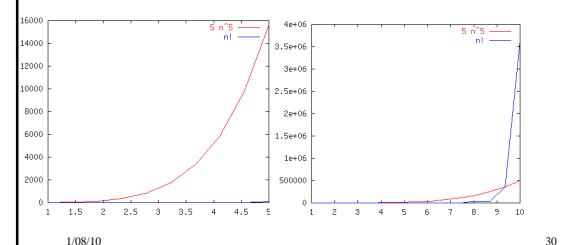

$$5n^5 \text{ vs. } n!$$

1/08/10

29

Which Function Grows Faster?

$$5n^5 \text{ vs. } n!$$

## Nested Loops

```
for i = 1 to n do
    for j = 1 to n do
        sum = sum + 1

for i = 1 to n do
    for j = 1 to n do
        sum = sum + 1
```

1/08/10

31

## Nested Loops

```
for i = 1 to n do
    for j = 1 to n do
        if (cond) {
            do_stuff(sum)
        } else {
            for k = 1 to n*n
                sum += 1
```

32

$$16n^3 \log_8(10n^2) + 100n^2 = O(n^3 \log(n))$$

- Eliminate low order terms
- Eliminate constant coefficients

1/08/10

33

$$16n^3 \log_8(10n^2) + 100n^2 = O(n^3 \log(n))$$

- Eliminate low order terms  $16n^3 \log_8(10n^2) + 100n^2$   
 $\Rightarrow 16n^3 \log_8(10n^2)$
- Eliminate constant coefficients  $\Rightarrow n^3 \log_8(10n^2)$   
 $\Rightarrow n^3 [\log_8(10) + \log_8(n^2)]$   
 $\Rightarrow n^3 \log_8(10) + n^3 \log_8(n^2)$   
 $\Rightarrow n^3 \log_8(n^2)$   
 $\Rightarrow n^3 2 \log_8(n)$   
 $\Rightarrow n^3 \log_8(n)$   
 $\Rightarrow n^3 \log_8(2) \log(n)$   
 $\Rightarrow n^3 \log(n)$
