

CSE 331 – Graph Search Worksheet

Question. Graph searching. We're going to take a trip! To Paris!! To help us plan, a friend has sent us a simplified map of the Paris Metro showing some of the main stops we'll be using. Here it is:

The map, of course, is a graph where the nodes are Metro stops and the edges are labeled with Metro line names and travel times between stops. We would like to use our knowledge of graph search algorithms to discover paths in the graph. Answer the questions on the next page.

CSE 331 – Graph Search Worksheet

Question (cont.) Find the fastest path (minimum travel time) from Sacre Coeur (SC) to Catacombs (C). If there are two or more paths with the same minimum time, write down one of them. As above, indicate the algorithm used and then show the path and total time.

(i) Algorithm used: Dijkstra's Total travel time: _____

(ii) Fastest path from SC to C (show the line used – Blue, Green, etc. – and travel time for each edge):

priority queue

nodes

Path	Cost

Node	Finished	Cost	Prev
