Graphs: Definitions and Representations (Chapter 9)

CSE 373

Data Structures and Algorithms

5/14/10

Today's Outline

- Admin:
 - Midterm #2, Wed May 19th.
 - HW #5 due Thursday, May 20 at 11:45pm
- Graphs
 - Representations
 - Topological Sort

5/14/10

2

Graph... ADT?

- Not quite an ADT... operations not clear
- A formalism for representing relationships between objects
 - Graph g = (v, E)
 - Set of vertices: $v = \{v_1, v_2, ..., v_n\}$
 - Set of edges:
 - $E = \{e_1, e_2, ..., e_m\}$ where each e_i connects two
 vertices $(\mathbf{v_{i1}}, \mathbf{v_{i2}})$ 5/14/10
- Han

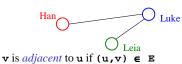

3

Graph Definitions

In directed graphs, edges have a specific direction:

In *undirected* graphs, they don't (edges are two-way):

5/14/10

More Definitions: Simple Paths and Cycles

A *simple path* repeats no vertices (except that the first can be the last):

p = {Seattle, Salt Lake City, San Francisco, Dallas}

p = {Seattle, Salt Lake City, Dallas, San Francisco, Seattle}

A *cycle* is a path that starts and ends at the same node:

p = {Seattle, Salt Lake City, Dallas, San Francisco, Seattle}

p = {Seattle, Salt Lake City, Seattle, San Francisco, Seattle}

A *simple cycle* is a cycle that repeats no vertices except that the first vertex is also the last (in undirected graphs, no edge can be repeated)

0

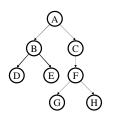

Trees as Graphs

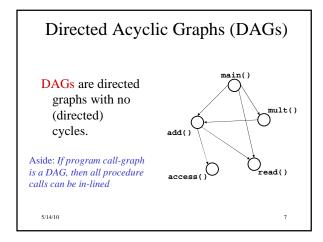

- Every tree is a graph!
- Not all graphs are trees!

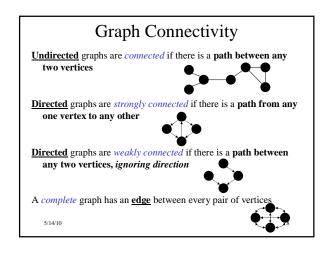

A graph is a tree if

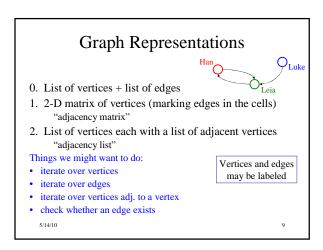

- There are no cycles (directed or undirected)
- There is a path from the root to every node

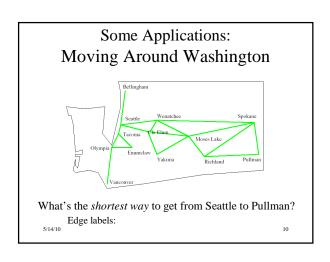

5/14/10

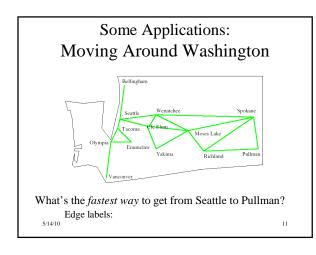

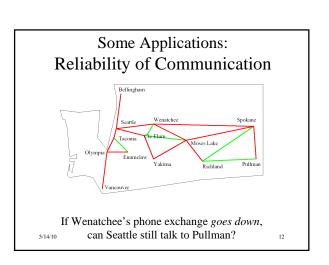

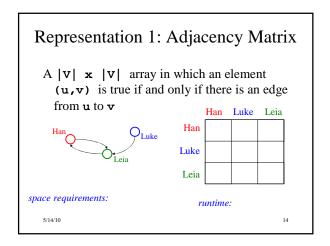

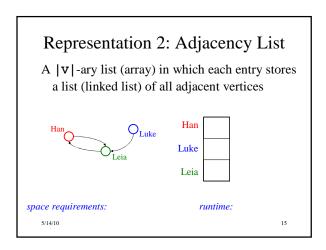

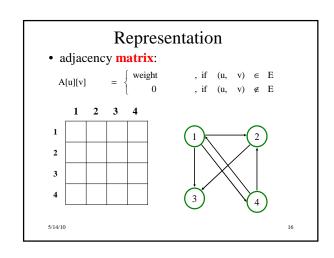

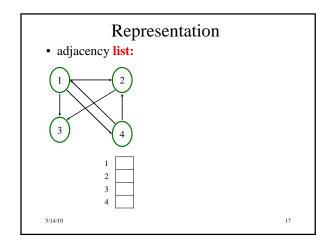

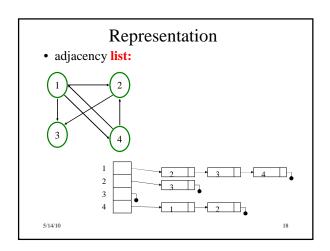

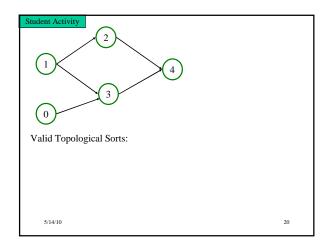

Application: Topological Sort Given a directed graph, G = (V, E), output all the vertices in \boldsymbol{v} such that no vertex is output before any other vertex with an edge to it. CSE 403 CSE 321) CSE 322 CSE 421) (CSE 142)→(CSE 143) CSE 341) CSE 451) (CSE 370) CSE 467) CSE 378 *Is the output unique?*5/14/10 19

```
Student Activity

void Graph::topsort(){
    Vertex v, w;

    labelEachVertexWithItsIn-degree();

    for(int count=0; count<NUM_VERTICES; count++){
        v = findNewVertexOfDegreeZero();

    v.topoNum = count;
    for each w adjacent to v
        w.indegree--;
    }
}</pre>
```

```
old Graph::topsort(){
  Queue q(NUM_VERTICES); int counter = 0; Vertex v, w;
  labelEachVertexWithItsIn-degree();
  q.makeEmpty();
                              intialize the
  for each vertex v
                                 queue
    if (v.indegree == 0)
      q.enqueue(v);
  while (!q.isEmpty()){ get a vertex with
    v = q.dequeue();
                               indegree 0
    v.topologicalNum = ++counter;
    for each \boldsymbol{w} adjacent to \boldsymbol{v}
      if (--w.indegree == 0)
                                    insert new
         q.enqueue(w);
                                     vertices
}
                                    Runtime:
